PAP-001 Guide Torrent: Certified Professional - PingAccess - PAP-001 Exam Prep - Pass-for-sure PAP-001

What's more, part of that VCEPrep PAP-001 dumps now are free: https://drive.google.com/open?id=14rImhsfOFusIxMx-rVyKz9k2bX6sS7Pi

VCEPrep can provide you with a reliable and comprehensive solution to pass Ping Identity certification PAP-001 exam. Our solution can 100% guarantee you to pass the exam, and also provide you with a one-year free update service. You can also try to free download the Ping Identity Certification PAP-001 Exam testing software and some practice questions and answers to on VCEPrep website.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	• Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.
Topic 2	• Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.
Topic 3	• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.

Topic 4	• General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.
Topic 5	• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.
Topic 6	• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.

Test PAP-001 Guide Online | PAP-001 Updated Test Cram

The PAP-001 exam dumps are real and updated PAP-001 exam questions that are verified by subject matter experts. They work closely and check all PAP-001 exam dumps one by one. They maintain and ensure the top standard of VCEPrep Certified Professional - PingAccess (PAP-001) exam questions all the time. The PAP-001 practice test is being offered in three different formats. These PAP-001 exam questions formats are PDF dumps files, web-based practice test software, and desktop practice test software.

Ping Identity Certified Professional - PingAccess Sample Questions (Q20-Q25):

NEW QUESTION # 20
An administrator is integrating a new PingAccess Proxied Application. The application will use an SSL certificate issued by a publicly trusted Certificate Authority. PingAccess is terminating SSL and is responsible for loading the SSL certificate for that application. What initial action must the administrator take in PingAccess in this situation?

- A. Import the PKCS#12 file with the full certificate chain into the Certificates.
- B. Import the SSL public key with the full certificate chain into the Certificates.
- C. Import the PKCS#12 file with the full certificate chain into the Key Pairs.
- D. Import the SSL public key with the full certificate chain into the Key Pairs.

Answer: C

Explanation:
For PingAccess to terminate SSL for a proxied application, it requires access to the private key and certificate chain. These are stored as Key Pairs.
Exact Extract:
"For SSL termination, you must import the server certificate and its private key as a PKCS#12 file into Key Pairs."
* Option A is incorrect - a public key alone cannot terminate SSL.
* Option B is incorrect - PKCS#12 files must go into Key Pairs, not Certificates.
* Option C is incorrect - public keys alone are insufficient; PingAccess must have the private key.
* Option D is correct - the PKCS#12 file with full chain and private key is imported into Key Pairs.
Reference: PingAccess Administration Guide - Managing Certificates and Key Pairs

NEW QUESTION # 21
What is the purpose of the admin.auth configuration setting?

- A. To configure SSO for the administrative user interface.
- B. To define the method to use for authenticating to the administrative API.

- C. To enable automatic authentication to the PingAccess administrative console.
- D. To override the SSO configuration for the administrative user interface.

Answer: D

Explanation:
Theadmin.authsetting in therun.propertiesfile is used to specify a fallback authentication method for the administrative console.
Exact Extract from official documentation:
"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the admin.auth=native property in the run.properties file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose ofadmin.authis tooverrideany configured SSO for the admin UI and enforce native (basic) authentication instead.
* Option Ais incorrect because theadmin.authsetting does not configure SSO. SSO for the admin UI is configured separately.
* Option Bis incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.
* Option Cis correct because it directly reflects the documented behavior:admin.authoverrides SSO configuration for the administrative UI and enables native authentication.
* Option Dis incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.
Reference:PingAccess User Interface Reference Guide -Configuring Admin UI SSO Authentication

NEW QUESTION # 22
An administrator needs to prevent PingAccess from automatically starting on a Windows Server. Which command would accomplish this task?

- A. wrapper-service.bat
- B. remove-install.bat
- C. uninstall-service.bat
- D. init.bat

Answer: C

Explanation:
PingAccess installs as a Windows service. To remove or prevent automatic startup, theuninstall-service.bat script is used.
Exact Extract:
"On Windows, useinstall-service.batto install PingAccess as a service anduninstall-service.batto remove the service."
* Option A (init.bat)initializes environment variables but does not manage services.
* Option B (uninstall-service.bat)is correct - it removes the Windows service, preventing auto-start.
* Option C (remove-install.bat)is not a valid PingAccess script.
* Option D (wrapper-service.bat)configures wrapper options, not service removal.
Reference:PingAccess Installation Guide -Windows Service Scripts

NEW QUESTION # 23
An organization has a highly available PingAccess cluster with four runtime nodes. The administrator wants to provide the same availability to administrative users. What should the administrator do?

- A. Configure four active administrative nodes with engine cluster pointed to all administrative nodes for configuration
- B. Configure two active administrative nodes with engine cluster pointed to both administrative nodes for configuration
- C. Configure one active and one replica administrative node with engine cluster pointed to both administrative nodes
- D. Configure one active and three replica administrative nodes with engine cluster pointed to all administrative nodes

Answer: D

Explanation:
PingAccess supportsone primary administrative console (active)and any number ofreplica administrative consoles. Engines must be configured to connect to theactive console, with replicas available for failover.
Exact Extract:
"In a clustered environment, PingAccess supports one clustered console (active) and replica consoles. Engines can connect to any console node for high availability."
* Option Ais incomplete - only one replica limits redundancy.

* Option Bis incorrect - multiple active consoles are not supported.
* Option Cis incorrect - cannot run two active consoles.
* Option Dis correct - one active admin console with multiple replicas ensures HA.
Reference:PingAccess Administration Guide -Clustered Console and Replica Configuration

NEW QUESTION # 24

Which two options can be changed in therun.propertiesfile? (Choose 2 answers.)

* A. Logging levels
* B. X-Frame-Options header
* C. Operational mode for PingAccess
* D. Default logs location
* E. URL for heartbeat endpoint

Answer: A,C

Explanation:
Therun.propertiesfile in PingAccess is the primary configuration file that defines system-level runtime behavior. According to PingAccess documentation:
* Exact Extract:
"Therun.propertiesfile contains configuration properties for PingAccess, including operational mode, logging levels, admin authentication fallback, cluster settings, and system defaults." (PingAccess Administrator's Guide -run.properties Reference) From this, we can determine:
* C. Operational mode for PingAccess#CorrectThe propertypa.operational.modeinrun.properties defines whether the node operates asSTANDALONE,CLUSTERED_CONSOLE, CLUSTERED_CONSOLE_REPLICA, orCLUSTERED_ENGINE. This is one of the core configurable options.
* E. Logging levels#CorrectProperties such aslog.leveland other logging configurations are explicitly defined inrun.properties, allowing administrators to adjust the verbosity of logs (DEBUG, INFO, WARN, ERROR).
Why the others are incorrect:
* A. Default logs location#IncorrectThe log file path is not controlled viarun.properties. It is defined in log4j2.xml, not inrun.properties.
* B. URL for heartbeat endpoint#IncorrectThe heartbeat endpoint (/pa/heartbeat.ping) is a fixed system endpoint and is not configurable inrun.properties.
* D. X-Frame-Options header#IncorrectSecurity headers likeX-Frame-Optionsare managed under application security policies or global response headers, not inrun.properties.
Reference:PingAccess Administrator's Guide -run.properties Reference(section describingpa.operational.
modeand logging configuration properties).

NEW QUESTION # 25

......

In fact, sticking to a resolution will boost your sense of self-esteem and self-control. So our PAP-001 exam materials can become your new aim. Our PAP-001 study materials could make a difference to your employment prospects. Getting rewards need to create your own value to your company. However, your capacity for work directly proves your value. As long as you get your PAP-001 Certification with our PAP-001 practice braindumps, you will have a better career for sure.
