C. 20-pay life
D. 10-pay life D. 10-pay life

Who is generally named as the beneficiary when a credit life insurance policy is issued? creditor

Are you concerned for the training material for PAP-001 certification exam? So, your search is ended as you have got to the place where you can catch the finest PAP-001 certification exam dumps. Those entire applicants who put efforts in PAP-001 certification exam want to achieve their goal, but there are diverse means of preparing PAP-001 Exams. Everyone might have their own approach to discover, how to associate PAP-001 certified professional. It really doesn't matter how you concoct for the PAP-001 certification exam, you'd need some provision to make things calmer.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.
Topic 2	<ul style="list-style-type: none">• General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.

Topic 3	<ul style="list-style-type: none"> • General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.
Topic 4	<ul style="list-style-type: none"> • Product Overview: This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.

PAP-001 Exam Questions - Certified Professional - PingAccess Exam Cram & PAP-001 Test Guide

ITPassLeader online digital Ping Identity PAP-001 exam questions are the best way to prepare. Using our Certified Professional - PingAccess (PAP-001) exam dumps, you will not have to worry about whatever topics you need to master. To practice for a Ping Identity PAP-001 Certification Exam in the software (free test), you should perform a self-assessment. The Ping Identity PAP-001 practice test software keeps track of each previous attempt and highlights the improvements with each attempt.

Ping Identity Certified Professional - PingAccess Sample Questions (Q66-Q71):

NEW QUESTION # 66

During a business review of an application, the administrator needs to change the Resource Authentication to anonymous. What are the two effects of making this change to the resource? (Choose 2 answers.)

- A. The resource requires no further authentication, and Identity Mappings still apply.
- B. The resource requires no further authentication, and Processing rules still apply.
- C. Requests to this resource are not logged, and Identity Mappings are applied.
- D. The resource requires no further authentication, and no rules will apply.
- E. The resource requires no further authentication, and all Access Control rules still apply.

Answer: A,B

Explanation:

When a resource is configured as anonymous, PingAccess does not challenge the user for authentication. However, certain processing and identity propagation still occur.

Exact Extract:

"Anonymous resources do not require authentication. Identity mappings and request/response processing rules still apply."

* Option A is incorrect because rules such as identity mappings and processing still apply.

* Option B is correct - Identity Mappings can still forward attributes, even for anonymous access.

* Option C is correct - Processing rules (e.g., request/response modifications) still apply.

* Option D is incorrect - requests are logged; anonymous does not disable logging.

* Option E is incorrect - access control rules (authorization) are not evaluated for anonymous resources.

NEW QUESTION # 67

An administrator needs to use attributes that are not currently available in the Identity Mapping Attribute Name dropdown. Which action should the administrator take?

- A. Create a Rewrite Content rule for the additional attributes
- B. Request that the additional attributes be added by the web developer
- C. Create a Web Session Attribute rule for the additional attributes
- D. Request that the additional attributes be added by the token provider administrator

Answer: D

Explanation:

Identity Mapping in PingAccess relies on attributes provided by the token provider (e.g., PingFederate, OIDC provider). If the desired attributes are not present in the dropdown, it means they are not being provided in the token or userinfo response.

Exact Extract:

"Attributes available in identity mappings are those provided in the web session by the token provider. If attributes are missing, they must be added to the token by the identity provider."

- * Option A is correct - the token provider administrator must configure the IdP to include the additional attributes.
- * Option B is incorrect - rewrite rules modify content but do not supply new identity attributes.
- * Option C is incorrect - developers cannot directly add identity attributes; they must come from the IdP.
- * Option D is incorrect - Web Session Attribute rules only evaluate available attributes; they don't create new ones.

NEW QUESTION # 68

An administrator is integrating a new PingAccess Proxied Application. The application will temporarily need a self-signed certificate during the POC/demo phase. PingAccess is terminating SSL and is responsible for loading the SSL certificate for the application. What initial action must the administrator take in PingAccess in this situation?

- A. Go to the Certificates section and create a new certificate
- **B. Go to the Key Pairs section and create a new certificate**
- C. Go to the Key Pairs section and import the PKCS#12 file provided by the publicly trusted Certificate Authority
- D. Go to the Key Pairs section and import the PKCS#12 file provided by the customer's internal Certificate Authority

Answer: B

Explanation:

For SSL termination, PingAccess requires a Key Pair (certificate + private key). During a POC/demo, when a self-signed certificate is used, the administrator can create it directly in the Key Pairs section of the console.

Exact Extract:

"Use the Key Pairs section to create self-signed certificates for testing or proof-of-concept deployments. For production, import a PKCS#12 file containing a certificate chain and private key."

- * Option A is incorrect - Certificates store trust anchors (CAs), not SSL termination certs.
- * Option B is incorrect - an internal CA-signed cert requires PKCS#12 import, not self-signed creation.
- * Option C is incorrect - a publicly trusted CA is not used for a demo phase.
- * Option D is correct - creating a new certificate in Key Pairs generates a self-signed cert suitable for demos.

NEW QUESTION # 69

A change is made to the configuration that prevents user access to an application. No one claims to have made the change. Which log file should the administrator use to determine who made the change?

- A. pingaccess_engine_audit.log
- **B. pingaccess_api_audit.log**
- C. pingaccess.log
- D. pingaccess_agent_audit.log

Answer: B

Explanation:

All administrative API calls that change PingAccess configuration are logged in pingaccess_api_audit.log. This allows administrators to track who made configuration changes.

Exact Extract:

"The pingaccess_api_audit.log file contains entries for all administrative API calls and is used to audit configuration changes."

- * Option A (pingaccess.log) contains runtime system messages but not detailed API audit entries.
- * Option B (pingaccess_engine_audit.log) is specific to engine request/response audit logging.
- * Option C (pingaccess_agent_audit.log) is used for PingAccess Agent traffic auditing, not administrative changes.
- * Option D (pingaccess_api_audit.log) is correct - it tracks admin API modifications.

Reference: PingAccess Administration Guide - Log Files

NEW QUESTION # 70

What is the purpose of the `engine.ssl.protocols` in the `run.properties` file?

- A. To configure SSL protocols used for clustering
- B. To configure the supported ciphers
- C. To configure the supported TLS versions
- D. To configure the supported HTTPS port

Answer: C

Explanation:

The `propertyengine.ssl.protocolsinrun.properties` specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The engine.ssl.protocols property configures which TLS versions are enabled for HTTPS listeners."

- * Option A (ciphers)is incorrect - cipher suites are defined separately, not in this property.
- * Option B (HTTPS port)is incorrect - the port is defined in the engine listener, not here.
- * Option C (TLS versions)is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).
- * Option D (clustering)is incorrect - clustering does not depend on this property.
