Free PDF 2025 Efficient CheckPoint New 156-836 Dumps Sheet

The CheckPoint 156-836 certification exam is a valuable asset for beginners and seasonal professionals. If you want to improve your career prospects then 156-836 certification is a step in the right direction. Whether you're just starting your career or looking

to advance your career, the 156-836 Certification Exam is the right choice. With the 156-836 certification you can gain a range of career benefits which include credibility, marketability, validation of skills, and access to new job opportunities.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q49-Q54):

NEW QUESTION # 49
Where should the sx_api_ports_dump.py command be run?

- A. SMO Appliance
- B. Management server
- C. Security Group
- D. Orchestrator

Answer: D

Explanation:
The sx_api_ports_dump.py command is used to display port mapping and traffic distribution details for Security Groups and Orchestrator ports. This command must be run on the Maestro Hyperscale Orchestrator (MHO), as it is the device responsible for managing communication and configuration of Security Groups and Security Group Members (SGMs). It does not function on the Management server, Security Group, or SMO Appliance, as these components do not have the same role or access to Orchestrator-specific port data.
Exact Extract:
"The sx_api_ports_dump.py command should be run on the Orchestrator, which is the device that manages the communication and the configuration of the Security Groups and the SGMs. The command shows the port mapping and the traffic distribution for each Security Group, as well as the backplane bonds and the Orchestrator ports. The command does not work on the Management server, the Security Group, or the SMO Appliance, as they do not have the same role and functionality as the Orchestrator."
-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 2: Maestro Security Groups, Lesson 2.4: Traffic Flow, page 2-20
-Check Point R81 Maestro Administration Guide, Chapter 2: Maestro Security Groups, Section: Traffic Distribution, page 2-8
Explanation of Options:
* A. Management server: Incorrect, as the Management server does not manage Orchestrator port configurations or traffic distribution.
* B. Security Group: Incorrect, as Security Groups (SGMs) do not have direct access to Orchestrator port data.
* C. Orchestrator: Correct, as the Orchestrator is the device where this command is executed to retrieve port and traffic distribution information.
* D. SMO Appliance: Incorrect, as the Single Management Object (SMO) Appliance does not handle Orchestrator-specific port management.

Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 2: Maestro Security Groups, Lesson 2.4: Traffic Flow, page 2-20 Check Point R81 Maestro Administration Guide, Chapter 2: Maestro Security Groups, Section: Traffic Distribution, page 2-8

NEW QUESTION # 50
To display processes that are consuming excessive system resources, users should use the_____ command.

- A. top
- B. asg stat -v
- C. asg perf -v
- D. asg_perf_hogs

Answer: D

Explanation:
The asg_perf_hogs command is a script that displays the processes that are consuming excessive system resources, such as CPU, memory, disk, and network, on the orchestrator and the appliances. It can help identify performance issues and bottlenecks in the Maestro environment.

NEW QUESTION # 51
What is the purpose of RJ-45 connectors located at the front panel of the Orchestrator MHO-170?

- A. Out-of-band interface for access to Orchestrator itself and Serial Console connector
- B. 1Gbps connectivity for Security Groups
- C. Two Out-of-band interfaces for access to Orchestrator itself
- D. Reserved for internal purposes. Not in use

Answer: A

Explanation:
Explanation
The RJ-45 connectors located at the front panel of the Orchestrator MHO-170 are used for out-of-band management and serial console access. One of them is a 1Gbps RJ-45 port that provides an out-of-band interface for accessing the Orchestrator itself for configuration and management purposes. The other one is a RJ-45 serial console port that provides a command-line interface for initial setup and troubleshooting.

NEW QUESTION # 52
What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

- A. Out-of-band interfaces for access to Orchestrator itself
- B. 1Gbps connectivity for Security Groups
- C. Additional ports used as uplinks
- D. Reserved for internal purposes. Not in use.

Answer: A

Explanation:
Explanation
The Management ports located on the Rear Panel of the Orchestrator MHO-140 are out-of-band interfaces that provide access to the Orchestrator itself for configuration and management purposes. They are not used for traffic distribution or connectivity to the Security Groups or the external networks. They are 1Gbps RJ-45 ports that can be connected to a switch or a router.
