

Pass AWS-Solutions-Associate Exam with Reliable Frequent AWS-Solutions-Associate Update by Test4Engine

What's more, part of that Test4Engine AWS-Solutions-Associate dumps now are free: <https://drive.google.com/open?id=1FPKehcrUTlr4cupQZSnx43TzCFz-Ju-s>

Test4Engine's AWS-Solutions-Associate exam training materials are proved to be effective by some professionals and examinees that have passed AWS-Solutions-Associate exam, Test4Engine's AWS-Solutions-Associate exam dumps are almost the same with real exam paper. It can help you pass AWS-Solutions-Associate certification exam. After you purchase our AWS-Solutions-Associate VCE Dumps, if you fail AWS-Solutions-Associate certification exam or there are any problems of AWS-Solutions-Associate test training materials, we will give a full refund to you. We believe that our Test4Engine's AWS-Solutions-Associate vce dumps will help you.

The AWS SAA-C02 exam covers a wide range of topics, including AWS architecture, deployment, security, and cost optimization. AWS-Solutions-Associate Exam consists of multiple-choice and multiple-answer questions, and candidates have 130 minutes to answer them. To pass the exam, candidates must score at least 720 out of 1000.

Excellent Frequent AWS-Solutions-Associate Update - Easy and Guaranteed AWS-Solutions-Associate Exam Success

Thousands of AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) exam applicants are satisfied with our AWS-Solutions-Associate practice test material because it is according to the latest AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) exam syllabus and we also offer up to 1 year of free Amazon Dumps updates. Visitors of Test4Engine can check the AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) product by trying a free demo. Buy the AWS-Solutions-Associate test preparation material now and start your journey towards success in the AWS Certified Solutions Architect - Associate (SAA-C02) (AWS-Solutions-Associate) examination.

Amazon AWS-Solutions-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) certification exam is a valuable certification for individuals who want to demonstrate their expertise in cloud computing and gain recognition as an AWS Solutions Architect. AWS Certified Solutions Architect - Associate (SAA-C02) certification exam covers a wide range of topics, including designing and deploying scalable, highly available, and fault-tolerant systems on AWS, selecting the appropriate AWS services for a given scenario, and identifying cost-effective solutions that meet business requirements. Passing the AWS-Solutions-Associate Certification Exam can help individuals enhance their career prospects and open up new opportunities in cloud computing.

The AWS-Solutions-Architect-Associate exam tests an individual's knowledge and skills in various areas related to AWS, such as designing and deploying scalable, highly available, and fault-tolerant systems, selecting the right AWS services for a given situation, migrating on-premises workloads to AWS, and managing and monitoring AWS resources. AWS-Solutions-Associate exam also covers topics such as security, cost optimization, and troubleshooting.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q123-Q128):

NEW QUESTION # 123

A company sends AWS CloudTrail logs from multiple AWS accounts to an Amazon S3 bucket in a centralized account. The company must keep the CloudTrail logs. The company must also be able to query the CloudTrail logs at any time. Which solution will meet these requirements?

- A. Use the CloudTrail event history in the centralized account to create an Amazon Athena table. Query the CloudTrail logs from Athena.
- B. Use Amazon Athena to create an Athena notebook. Configure CloudTrail to send the logs to the notebook. Run queries from Athena.
- C. Configure an Amazon Neptune instance to manage the CloudTrail logs. Query the CloudTrail logs from Neptune.
- D. Configure CloudTrail to send the logs to an Amazon DynamoDB table. Create a dashboard in Amazon QuickSight to query the logs in the table.

Answer: A

Explanation:

It allows the company to keep the CloudTrail logs and query them at any time. By using the CloudTrail event history in the centralized account, the company can view, filter, and download recent API activity across multiple AWS accounts. By creating an Amazon Athena table from the CloudTrail event history, the company can use a serverless interactive query service that makes it easy to analyze data in S3 using standard SQL. By querying the CloudTrail logs from Athena, the company can gain insights into user activity and resource changes. References:

NEW QUESTION # 124

A Solution Architect is designing a three-tier web application. The Architect wants to restrict access to the database tier to accept traffic from the application servers only.

However, these application servers are in an Auto Scaling group and may vary in quantity.

How should the Architect configure the database servers to meet the requirements?

- A. Configure the database security group to allow database traffic from the application server IP addresses.
- B. Configure the database subnet network ACL to allow inbound database traffic from the application-tier subnet.
- C. Configure the database subnet network ACL to deny all inbound non-database traffic from the application-tier subnet.
- D. Configure the database security group to allow database traffic from the application server security group.

Answer: D

Explanation:

Explanation

Configure the database security group to allow database traffic from the application server security group.

Anytime you see "Allow traffic" think Security groups

NEW QUESTION # 125

Groups can't ____.

- A. be nested more than 2 levels
- B. be nested more than 3 levels
- C. be nested more than 4 levels
- D. be nested at all

Answer: D

NEW QUESTION # 126

A solutions architect is designing the architecture for a web application that has a frontend and a backend. The backend services must receive data from the frontend services for processing. The frontend must manage access to the application by using API keys. The backend must scale without affecting the frontend. Which solution will meet these requirements?

- A. Deploy an Amazon API Gateway HTTP API as the frontend to direct traffic to an Amazon Simple Notification Service (Amazon SNS) topic. Use Amazon Elastic Kubernetes Service (Amazon EKS) on AWS Fargate as the backend. Subscribe Amazon EKS to the topic.
- **B. Deploy an Amazon API Gateway HTTP API as the frontend to direct traffic to an Amazon Simple Queue Service (Amazon SQS) queue. Use AWS Lambda functions as the backend to read from the queue.**
- C. Deploy an Amazon API Gateway REST API as the frontend to direct traffic to an Amazon Simple Queue Service (Amazon SQS) queue. Use Amazon Elastic Container Service (Amazon ECS) on AWS Fargate as the backend to read from the queue.
- D. Deploy an Amazon API Gateway REST API as the frontend to direct traffic to an Amazon Simple Notification Service (Amazon SNS) topic. Use AWS Lambda functions as the backend. Subscribe the Lambda functions to the topic.

Answer: B

Explanation:

Using API Gateway with API keys provides secure access control. Amazon SQS allows asynchronous decoupling between frontend and backend, ensuring that backend processing can scale independently. AWS Lambda reading from SQS ensures scalable, event-driven processing with minimal operational management.

This architecture is resilient and decoupled.

Reference: AWS Well-Architected - Decoupling and Microservices, API Gateway with SQS and Lambda Integration

NEW QUESTION # 127

You are working with customer who has 10 TB of archival data that they want to migrate to Amazon Glacier. The customer has a 1Mbps connection to the Internet. Which service or feature provide the fastest method of getting the data into Amazon Glacier?

- **A. AWS Import/Export**
- B. VM Import/Export
- C. Amazon Glacier multipart upload
- D. AWS Storage Gateway

Answer: A
