Our C_ACDET_2506 exam reference materials allow free trial downloads. You can get the information you want to know through the trial version. After downloading our C_ACDET_2506 study materials trial version, you can also easily select the version you like, as well as your favorite C_ACDET_2506 exam prep, based on which you can make targeted choices. Our C_ACDET_2506 Study Materials want every user to understand the product and be able to really get what they need. Our C_ACDET_2506 study materials are so easy to understand that no matter who you are, you can find what you want here.

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

Topic 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 3	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

100% Pass Quiz 2025 C_ACDET_2506: High Hit-Rate Pass SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Guarantee

We guarantee that you can pass the exam at one time even within one week based on practicing our C_ACDET_2506 exam materials regularly. 98 to 100 percent of former exam candidates have achieved their success by the help of our C_ACDET_2506 Practice Questions. And we have been treated as the best friend as our C_ACDET_2506 training guide can really help and change the condition which our loyal customers are in and give them a better future.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following languages is used to define defaults on fields within Ariba?

- A. Python programming language
- B. Javascript
- **C. Ariba expression language**
- D. ABAP

Answer: C

NEW QUESTION # 34

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. SalesContractRequest and InternalContractRequest
- B. ContractRequest
- **C. InternalContractWorkspace and SalesContractWorkspace**
- D. AbstractContractWorkspace

Answer: C

Explanation:

The ContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspace classes in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 35

Which read-only files show the key and English translations for custom field labels and helptips?

- A. The JSON files that can be exported through ICM
- B. The customerResource files that can be exported through ICM
- **C. The JSON files that can be exported through AML & Translations Upload**
- D. The customerResource files that can be exported through AML & Translations Upload

Answer: C

Explanation:

SAP Ariba stores translations for custom field labels and help tips in JSON files exported and imported via AML (Advanced Metadata List) & Translations Upload. These JSON files contain key-value pairs representing the translation keys and their English or localized strings. This mechanism supports language management and bulk updates of translated content.

ICM exports configuration bundles but does not handle translation files in JSON format. CustomerResource files are not the standard format for translation export/import.

Using AML & Translations Upload allows administrators to maintain and update translations across multiple languages efficiently, ensuring consistent user experience in multi-lingual deployments.

NEW QUESTION # 36

While working on a customer project, the customer asks if specific details can be captured and made available in reporting for a sourcing project or contract that doesn't fit the standard fields. What is the recommended way to handle this scenario?

- A. Suggest the customer put a Word document on the template and capture all information in that document.
- **B. Configure as many custom fields as possible for data capture purposes.**
- C. Create a dynamic form (dform) where common data can be synced with the project header through customization.
- D. Create a Microsoft Form from the Actions menu for managing all the requirements.

Answer: B

Explanation:

The recommended approach is to configure custom fields for capturing non-standard data in sourcing projects or contracts. Custom fields allow structured data capture directly within SAP Ariba, which can then be fully included in reporting and analytics. Documents like Word files (A) are unstructured and not reportable. Dynamic forms synced with project headers (B) are not supported as standard functionality. External tools like Microsoft Forms (C) do not integrate with SAP Ariba's reporting capabilities. Custom fields can include picklists, validation rules, translations, and help tips, enabling flexible, maintainable data collection aligned with reporting and compliance needs.

NEW QUESTION # 37

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Define a Visibility Condition in the Conditions tab
- B. Enable field property "Use relationship chooser" in the Advanced tab
- C. Enable field property "Enable for Template Field Setter" in the Advanced tab
- **D. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab**
- E. Load Relation types and Relation entries

Answer: D

NEW QUESTION # 38
