COF-C02 Test Simulator | New COF-C02 Exam Test

Our COF-C02 study materials are different from common study materials, which can motivate you to concentrate on study. Up to now, many people have successfully passed the COF-C02 exam with our assistance. So you need to be brave enough to have a try.

We can guarantee that you will love learning our COF-C02 Preparation engine as long as you have a try on it. And you can free download the demos of our COF-C02 learning guide on our website, it is easy, fast and convenient.

Snowflake SnowPro Core Certification Exam Sample Questions (Q927-Q932):

NEW QUESTION # 927

How are network policies defined in Snowflake?

- A. They are a set of rules that define the network routes within Snowflake.
- B. They are a set of rules that define how data can be transferred between different Snowflake accounts within an organization.
- C. They are a set of rules that control access to Snowflake accounts by specifying the IP addresses or ranges of IP addresses that are allowed to connect to Snowflake.
- D. They are a set of rules that dictate how Snowflake accounts can be used between multiple users.

Answer: C

Explanation:
Network policies in Snowflake are defined as a set of rules that manage the network-level access to Snowflake accounts. These rules specify which IP addresses or IP ranges are permitted to connect to Snowflake, enhancing the security of Snowflake accounts by preventing unauthorized access. Network policies are an essential aspect of Snowflake's security model, allowing administrators to enforce access controls based on network locations.

NEW QUESTION # 928

What SnowFlake database object is derived from a query specification, stored for later use, and can speed up expensive aggregation on large data sets?

- A. Materialized view
- B. External table
- C. Temporary table
- D. Secure view

Answer: A

Explanation:
A materialized view in SnowFlake is a database object derived from a query specification, stored for later use, and can significantly speed up expensive aggregations on large data sets. Materialized views store the result of their underlying query, reducing the need to recompute the result each time the view is accessed. This makes them ideal for improving the performance of read-heavy, aggregate-intensive queries.

NEW QUESTION # 929

A single user of a virtual warehouse has set the warehouse to auto-resume and auto-suspend after 10 minutes. The warehouse is currently suspended and the user performs the following actions:
1. Runs a query that takes 3 minutes to complete
2. Leaves for 15 minutes
3. Returns and runs a query that takes 10 seconds to complete
4. Manually suspends the warehouse as soon as the last query was completed When the user returns, how much billable compute time will have been consumed?

- A. 24 minutes
- B. 10 minutes
- C. 4 minutes
- D. 14 minutes

Answer: D

Explanation:
The billable compute time includes the time the warehouse is running queries plus the auto-suspend time after the last query if the warehouse is not manually suspended. In this scenario, the warehouse runs for 3 minutes, suspends after 10 minutes of inactivity, resumes for a 10-second query, and then is manually suspended. The total billable time is the sum of the initial 3 minutes, the 10 minutes of auto-suspend time, and the brief period for the 10-second query, which is rounded up to the next full minute due to Snowflake's billing practices. NEW QUESTION # 930
What impact does dropping a column from a table have on the micro-partitions of that table?

- A. The current micro-partitions will not be available for Time Travel, and new micro-partitions will be created.
- B. The data associated with the dropped column will be removed from all existing micro-partitions.
- C. New micro-partitions will be created containing only the data for the remaining columns.
- D. The existing micro-partitions will not be affected.

Answer: D

NEW QUESTION # 931
A stream can be created on which Snowflake objects to record data manipulation language(DML) changes?
(Select TWO).

- A. Standard tables
- B. Schemas
- C. Database
- D. Pipes
- E. Standard tables
- F. Standard views

Answer: A,E

Explanation:
Snowflake streams are objects that enable users to track changes (inserts, updates, and deletes) to the data in tables, facilitating real-time data processing and integration workflows. Streams can be created on standard tables, capturing DML changes made to these tables so that downstream processes can consume the changes incrementally. This feature supports efficient data ETL, replication, and real-time analytics by providing a mechanism to process only the data that has changed. Note: The correct options should likely include a distinction between "Standard tables" and another object type such as "External tables" rather than repeating "Standard tables" twice.References: Snowflake Documentation on Streams

NEW QUESTION # 932
......

Photoshop layers that are converted into a Smart Object become COF-C02 part of an embedded file, but you can put any of those layers back into your Photoshop file, Definitions Appendix) Endnotes.

Our training courses are designed and updated by 2000+ renowned COF-C02 Latest Mock Exam industry experts, Many study guides always jack up their prices for profiteering, The interaction and intelligent properties of SnowPro Core Certification Exam VCE format training have attracted many candidates, and motivate the enthusiastic for study of the Snowflake COF-C02 Actual Test.

Trustable Snowflake COF-C02 Latest Exam Preparation and the Best Accurate COF-C02 Test Simulator

It can let you be fully prepared for exam, and almost have 100% pass rate of COF-C02 exam, Our company offers free demo of COF-C02 exam dumps for you to have a try.
