

Pass Databricks-Certified-Data-Analyst-Associate Exam with Valid Databricks-Certified-Data-Analyst-Associate Valid Exam Answers by Lead2PassExam

2025 Latest Lead2PassExam Databricks-Certified-Data-Analyst-Associate PDF Dumps and Databricks-Certified-Data-Analyst-Associate Exam Engine Free Share: <https://drive.google.com/open?id=1nRoH2KF5MZfC4QO2Kgq7jLam7YqbYbuV>

Databricks-Certified-Data-Analyst-Associate study dumps have a pass rate of 98% to 100% because of the high test hit rate. So our exam materials are not only effective but also useful. If our candidates have other things, time is also very valuable. It is very difficult to take time out to review the Databricks-Certified-Data-Analyst-Associate Exam. But if you use Databricks-Certified-Data-Analyst-Associate exam materials, you will learn very little time and have a high pass rate. Our Databricks-Certified-Data-Analyst-Associate study materials are worthy of your trust.

Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.
Topic 2	<ul style="list-style-type: none">• SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.
Topic 3	<ul style="list-style-type: none">• Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.
Topic 4	<ul style="list-style-type: none">• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints• warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint• warehouses, trade-off between cluster size and cost for Databricks SQL endpoints• warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.

Topic 5	<ul style="list-style-type: none"> • Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.

Test Databricks-Certified-Data-Analyst-Associate Questions & Databricks-Certified-Data-Analyst-Associate PDF Dumps Files

Before the clients purchase our Databricks-Certified-Data-Analyst-Associate study practice guide, they can have a free trial freely. The clients can log in our company's website and visit the pages of our products. The pages of our products lists many important information about our Databricks-Certified-Data-Analyst-Associate exam materials and they include the price, version and updated time of our products, the exam name and code, the total amount of the questions and answers, the merits of our Databricks-Certified-Data-Analyst-Associate useful test guide and the discounts. You can have a comprehensive understanding of our Databricks-Certified-Data-Analyst-Associate useful test guide after you see this information.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

A data analyst is processing a complex aggregation on a table with zero null values and their query returns the following result:

group_1	group_2	sum
null	null	100
null	Y	70
null	Z	30
A	null	50
A	Y	30
A	Z	20
B	null	50
B	Y	40
B	Z	10

Which of the following queries did the analyst run to obtain the above result?

• A.

```
SELECT
  group_1,
  group_2,
  count(values) AS count
FROM my_table
GROUP BY group_1, group_2;
```

• B.

```
SELECT
  group_1,
  group_2,
  count(values) AS count
FROM my_table
GROUP BY group_1, group_2 WITH CUBE;
```

```

SELECT
    group_1,
    group_2,
    count(values) AS count
FROM my_table
GROUP BY group_1, group_2 WITH ROLLUP;

```

- C.
- D.

```

SELECT
    group_1,
    group_2,
    count(values) AS count
FROM my_table
GROUP BY group_1, group_2 INCLUDING NULL;

```

- E.

```

SELECT
    group_1,
    group_2,
    count(values) AS count
FROM my_table
GROUP BY group_1, group_2, (group_1, group_2);

```

Answer: C

Explanation:

The result set provided shows a combination of grouping by two columns (group_1 and group_2) with subtotals for each level of grouping and a grand total. This pattern is typical of a GROUP BY ... WITH ROLLUP operation in SQL, which provides subtotal rows and a grand total row in the result set.

Considering the query options:

A) Option A: GROUP BY group_1, group_2 INCLUDING NULL - This is not a standard SQL clause and would not result in subtotals and a grand total.

B) Option B: GROUP BY group_1, group_2 WITH ROLLUP - This would create subtotals for each unique group_1, each combination of group_1 and group_2, and a grand total, which matches the result set provided.

C) Option C: GROUP BY group_1, group_2 - This is a simple GROUP BY and would not include subtotals or a grand total.

D) Option D: GROUP BY group_1, group_2, (group_1, group_2) - This syntax is not standard and would likely result in an error or be interpreted as a simple GROUP BY, not providing the subtotals and grand total.

E) Option E: GROUP BY group_1, group_2 WITH CUBE - The WITH CUBE operation produces subtotals for all combinations of the selected columns and a grand total, which is more than what is shown in the result set.

The correct answer is Option B, which uses WITH ROLLUP to generate the subtotals for each level of grouping as well as a grand total. This matches the result set where we have subtotals for each group_1, each combination of group_1 and group_2, and the grand total where both group_1 and group_2 are NULL.

NEW QUESTION # 15

What does Partner Connect do when connecting Power BI and Tableau?

- A. Creates a Personal Access Token, downloads and installs an ODBC driver, and downloads a configuration file for connection by Power BI or Tableau to a SQL Warehouse (formerly known as a SQL Endpoint).
- B. Creates a Personal Access Token for authentication into Databricks SQL and emails it to you.
- C. Downloads and installs an ODBC driver.

- D. Downloads a configuration file for connection by Power BI or Tableau to a SQL Warehouse (formerly known as a SQL Endpoint).

Answer: A

Explanation:

When connecting Power BI and Tableau through Databricks Partner Connect, the system automates several steps to streamline the integration process:

Personal Access Token Creation: Partner Connect generates a Databricks personal access token, which is essential for authenticating and establishing a secure connection between Databricks and the BI tools.

ODBC Driver Installation: The appropriate ODBC driver is downloaded and installed. This driver facilitates communication between the BI tools and Databricks, ensuring compatibility and optimal performance.

Configuration File Download: A configuration file tailored for the selected BI tool (Power BI or Tableau) is provided. This file contains the necessary connection details, simplifying the setup process within the BI tool.

By automating these steps, Partner Connect ensures a seamless and efficient integration, reducing manual configuration efforts and potential errors.

NEW QUESTION # 16

How can a data analyst determine if query results were pulled from the cache?

- A. Go to the SQL Warehouse (formerly SQL Endpoints) tab and click on Cache. The Cache file will show the contents of the cache.
- B. Go to the Query History tab and click on the text of the query. The slideout shows if the results came from the cache.
- C. Go to the Data tab and click Last Query. The details of the query will show if the results came from the cache.
- D. Go to the Alerts tab and check the Cache Status alert.
- E. Go to the Queries tab and click on Cache Status. The status will be green if the results from the last run came from the cache.

Answer: B

Explanation:

Databricks SQL uses a query cache to store the results of queries that have been executed previously. This improves the performance and efficiency of repeated queries. To determine if a query result was pulled from the cache, you can go to the Query History tab in the Databricks SQL UI and click on the text of the query. A slideout will appear on the right side of the screen, showing the query details, including the cache status. If the result came from the cache, the cache status will show "Cached". If the result did not come from the cache, the cache status will show "Not cached". You can also see the cache hit ratio, which is the percentage of queries that were served from the cache. Reference: The answer can be verified from Databricks SQL documentation which provides information on how to use the query cache and how to check the cache status. Reference link: Databricks SQL - Query Cache

NEW QUESTION # 17

Which of the following statements about adding visual appeal to visualizations in the Visualization Editor is incorrect?

- A. Data Labels can be formatted.
- B. Tooltips can be formatted.
- C. Visualization scale can be changed.
- D. Colors can be changed.
- E. Borders can be added.

Answer: E

Explanation:

The Visualization Editor in Databricks SQL allows users to create and customize various types of charts and visualizations from the query results. Users can change the visualization type, select the data fields, adjust the colors, format the data labels, and modify the tooltips. However, there is no option to add borders to the visualizations in the Visualization Editor. Borders are not a supported feature of the new chart visualizations in Databricks¹. Therefore, the statement that borders can be added is incorrect. Reference: New chart visualizations in Databricks | Databricks on AWS

NEW QUESTION # 18

A data engineering team has created a Structured Streaming pipeline that processes data in micro-batches and populates gold-level tables. The microbatches are triggered every 10 minutes.

A data analyst has created a dashboard based on this gold level data

a. The project stakeholders want to see the results in the dashboard updated within 10 minutes or less of new data becoming available within the gold-level tables.

What is the ability to ensure the streamed data is included in the dashboard at the standard requested by the project stakeholders?

- A. A refresh schedule with a Structured Streaming cluster
- B. A refresh schedule with an always-on SQL Warehouse (formerly known as SQL Endpoint)
- **C. A refresh schedule with an interval of 10 minutes or less**
- D. A refresh schedule with stakeholders included as subscribers

Answer: C

Explanation:

In this scenario, the data engineering team has configured a Structured Streaming pipeline that updates the gold-level tables every 10 minutes. To ensure that the dashboard reflects the most recent data, it is essential to set the dashboard's refresh schedule to an interval of 10 minutes or less. This synchronization ensures that stakeholders view the latest information shortly after it becomes available in the gold-level tables. Options B, C, and D do not directly address the requirement of aligning the dashboard refresh frequency with the data update interval.

NEW QUESTION # 19

.....

Lead2PassExam is a website for Databricks Certification Databricks-Certified-Data-Analyst-Associate Exam to provide a short-term effective training. Databricks Databricks-Certified-Data-Analyst-Associate is a certification exam which is able to change your life. IT professionals who gain Databricks Databricks-Certified-Data-Analyst-Associate authentication certificate must have a higher salary than the ones who do not have the certificate and their position rising space is also very big, who will have a widely career development prospects in the IT industry in.
