The old clients enjoy some certain discounts when they buy our 156-315.81 exam torrent. Our experts check whether there is the update of the test bank every day and if there is an updated version of our 156-315.81 learning guide, then the system will send it to the client automatically. And that is one of the reasons why our 156-315.81 study materials are so popular for we give more favourable prices and more considerable service for our customers.

What is the cost of the CheckPoint 156-315.81 Exam

The price of the CheckPoint 156-315.81 Exam is USD 250.

The CCSE R81 certification program is an industry-standard certification program that is recognized globally. Check Point Certified Security Expert R81 certification program is designed to validate the skills and knowledge of security professionals in implementing and managing Check Point Security solutions. The program is recognized by various organizations and government agencies worldwide, making it a valuable certification for security professionals who are seeking to enhance their career in the field of network security.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q188-Q193):

NEW QUESTION # 188

When setting up an externally managed log server, what is one item that will not be configured on the R81 Security Management Server?

- A. FQDN
- **B. NAT**
- C. IP
- D. SIC

Answer: B

Explanation:

Explanation

NAT (Network Address Translation) is one item that will not be configured on the R81 Security Management Server when setting up an externally managed log server. NAT is a technique that allows devices with private IP addresses to communicate with devices with public IP addresses by translating the private addresses to public ones. NAT is not relevant for configuring an externally managed log server, which requires only the IP address, SIC (Secure Internal Communication), and FQDN (Fully Qualified Domain Name) of the log server.

NEW QUESTION # 189

When doing a Stand-Alone Installation, you would install the Security Management Server with which other Check Point architecture component?

- A. None, Security Management Server would be installed by itself.
- B. SmartConsole
- C. SecureClient
- **D. Security Gateway**
- E. SmartEvent

Answer: D

NEW QUESTION # 190

Which statement is true regarding redundancy?

- A. System Administrators know when their cluster has failed over and can also see why it failed over by using the cphaprob -f if command.
- **B. Both ClusterXL and VRRP are fully supported by Gaia and available to all Check Point appliances, open servers, and virtualized environments.**
- C. ClusterXL offers three different Load Sharing solutions: Unicast, Broadcast, and Multicast.
- D. Machines in a ClusterXL High Availability configuration must be synchronized.

Answer: B

Explanation:

Explanation

The statement that is true regarding redundancy is Both ClusterXL and VRRP are fully supported by Gaia and available to all Check Point appliances, open servers, and virtualized environments. ClusterXL and VRRP are two technologies that provide high availability and load sharing for Security Gateways. They are both supported by Gaia OS and can be deployed on various platforms. The other statements are either false or incomplete regarding redundancy. References: Check Point R81 ClusterXL Administration Guide, Check Point R81 Gaia Administration Guide

NEW QUESTION # 191

You can select the file types that are sent for emulation for all the Threat Prevention profiles. Each profile defines a(n) _____ or _____ action for the file types.

- **A. Inspect/Bypass**
- B. Inspect/Prevent

- C. Prevent/Bypass
- D. Detect/Bypass

Answer: A

Explanation:

You can select the file types that are sent for emulation for all the Threat Prevention profiles. Each profile defines an Inspect or Bypass action for the file types. The Inspect action means that the file will be sent to the Threat Emulation engine for analysis, and the Bypass action means that the file will not be sent and will be allowed or blocked based on other Threat Prevention blades¹. The other options are not valid actions for file types in Threat Prevention profiles. References: Check Point R81 Threat Prevention Administration Guide

NEW QUESTION # 192

The back-end database for Check Point R81 Management uses:

- **A. PostgreSQL**
- B. MySQL
- C. MongoDB
- D. DBMS

Answer: A

Explanation:

The back end database for Check Point R81 Management uses PostgreSQL, which is an open source relational database management system². MongoDB, MySQL, and DBMS are not used by Check Point R81 Management. References: 2: Check Point Software, Getting Started, Database.
