

Pass Guaranteed 2025 156-536: Fantastic Relevant Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Answers

2025 Latest Dumpexams 156-536 PDF Dumps and 156-536 Exam Engine Free Share: <https://drive.google.com/open?id=1CWiv-S7dZUMv3SpICwOu4t3ohncQPm8P>

Our 156-536 study materials have a professional attitude at the very beginning of its creation. The series of 156-536 measures we have taken is also to allow you to have the most professional products and the most professional services. I believe that in addition to our 156-536 Exam Questions, you have also used a variety of products. We believe if you compare our 156-536 training guide with the others, you will choose ours at once.

CheckPoint 156-536 Exam Syllabus Topics:

Topic	Details
Topic 1	• Introduction to Harmony Endpoint: This section measures the skills of CheckPoint Security Administrators about the fundamental concepts of Harmony Endpoint. It introduces candidates to the capabilities of the Harmony Endpoint solution, which is designed to protect endpoint devices from various cyber threats.
Topic 2	• Deploying Harmony Endpoint Data Security Protection: In this domain, CheckPoint Security Administrators will demonstrate their skills in deploying data security protections within Harmony Endpoint. This includes configuring data loss prevention strategies and ensuring data integrity across endpoints.
Topic 3	• Troubleshooting: In this final section, CheckPoint Security Administrators will demonstrate their troubleshooting skills related to Harmony Endpoint. This involves identifying and resolving issues that may arise during deployment or operation of the endpoint security solution.
Topic 4	• Harmony Endpoint Management as a Service: This section targets Harmony Endpoint Security Professionals, focusing on managing endpoint security as a service. It covers the cloud-based management capabilities of Harmony Endpoint, allowing for scalable deployment and policy management.
Topic 5	• Large-Scale Harmony Endpoint Deployment: This domain is aimed at Harmony Endpoint Security Professionals and addresses the challenges associated with deploying Harmony Endpoint at scale. Candidates will learn about strategies for efficient large-scale implementation while maintaining security standards across numerous devices.

Topic 6	Advanced Threat Prevention: CheckPoint Security Administrators will be assessed in this area, which covers advanced techniques for preventing sophisticated threats. This includes leveraging threat intelligence and proactive measures to safeguard endpoints from emerging cyber risks.

Exam Dumps 156-536 Demo | 156-536 Study Guide Pdf

New latest CheckPoint 156-536 valid exam study guide can help you exam in short time. Candidates can save a lot time and energy on preparation. It is a shortcut for puzzled examinees to purchase 156-536 valid exam study guide. If you choose our products, you only need to practice questions several times repeatedly before the real test. Our products are high-quality and high passing rate, and then you will obtain many better opportunities.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q14-Q19):

NEW QUESTION # 14

By default, Endpoint Security Manager is configured as which kind of server?

- A. Webserver
- B. Log Server
- C. Management Server
- D. Network Server

Answer: C

Explanation:

The Endpoint Security Manager (ESM), also referred to as the Endpoint Security Management Server, is the core component in Harmony Endpoint for managing policies, deployments, and monitoring. Its default configuration is detailed in theCP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf.

Onpage 23, under "Endpoint Security Management Server," the guide describes:

"Includes the Endpoint Security policy management and databases. It communicates with endpoint clients to update their components, policies, and protection data." This statement establishes that the ESM's primary role ismanagement, encompassing policy enforcement, database storage, and client communication. By default, it is configured as aManagement Server, aligning withOption C. The ESM oversees the entire endpoint security environment, distinguishing it from other server types.

Evaluating the alternatives:

* Option A: Network Server- This is too generic and not a specific role defined for the ESM in Harmony Endpoint.

* Option B: Webserver- While the ESM may host web interfaces (e.g., for SmartEndpoint), its core function is management, not web serving.

* Option D: Log Server- Logging is a feature of the ESM (e.g., page 21 mentions monitoring), but its default and primary configuration is as a management server, not solely a log server.

Option Ccorrectly identifies the ESM's default configuration as per the official documentation.

References:

CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 23: "Endpoint Security Management Server" (defines ESM's default role).

NEW QUESTION # 15

default, an FDE Action does what?

- A. Re-defines all visible disk volumes
- B. Encrypts all visible disk volumes
- C. Rebuilds the hard drive
- D. Decrypts all visible disk volumes

Answer: B

NEW QUESTION # 16

The Harmony Endpoint solution includes which three Data Security Software Capability protections?

- A. * Full Disk Encryption* Media Encryption* Anti-Malware
- B. * Media Encryption* Media Decryption* Remote Access VPN
- C. * Passwords and Usernames* Port Protection (MEPP)* Security Questions
- D. * Full Disk Encryption* Media Encryption & Port Protection (MEPP)* Remote Access VPN

Answer: D

NEW QUESTION # 17

Endpoint Security Clients are applications installed on company-owned desktop and laptop computers which include the following:

- A. Endpoint Security software Capabilities and a GUI client to manage policies for all capabilities
- B. GUI client that connects to the local Endpoint Capability Software to manage the policy and all other configuration for that Endpoint only
- C. Endpoint security software Capabilities and a device agent which operates as a container for the Capabilities and communicates with the Endpoint Management Server
- D. GUI client that connects to the Endpoint Security Management Server to manage the policy and other configuration for Endpoints

Answer: C

Explanation:

Endpoint Security Clients are essential components of the Harmony Endpoint solution, installed on end-user devices such as desktops and laptops to provide security features and maintain communication with the centralized management infrastructure.

The CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf clearly defines their composition and functionality.

On page 19, under the section "Endpoint Security Client," the document states:

"The Endpoint Security client is available on Windows and Mac. These are the Endpoint Security components that are available on Windows." This is followed by a table on page 20 listing components such as Compliance, Anti-Malware, Full Disk Encryption, and others, indicating that the client includes various security capabilities. However, the structural definition of the client is further clarified on page 24, under "Endpoint Security Clients":

"Application installed on end-user computers to monitor security status and enforce security policies." This description highlights that the client encompasses security software capabilities. Additionally, on page 27

, under "Client to Server Communication," the guide elaborates:

"The client is always the initiator of the connections. Most communication is over HTTPS (TCP/443), including Policy downloads and Heartbeat." This confirms that the client includes a device agent responsible for communication with the Endpoint Security Management Server, acting as a container for the security capabilities (e.g., Anti-Malware, Full Disk Encryption) and facilitating policy enforcement and status updates. Thus, Option A accurately captures this dual role: "Endpoint security software Capabilities" (the security components) and "a device agent" (the communication layer) that interacts with the server.

The other options do not align with the documentation:

* Option B: Describes a GUI client for management, which aligns more with SmartEndpoint (see page 24, item 3), not the Endpoint Security Client installed on end-user devices.

* Option C: Suggests a GUI within the client for managing policies, but policy management is centralized via SmartEndpoint or the Web Management Console, not the client itself (see page 19).

* Option D: Implies local policy management, which contradicts the centralized architecture where policies are downloaded from the server (see page 27).

NEW QUESTION # 18

External Policy Servers are placed between the Endpoint clients and the Endpoint Security Management Server. What benefit does the External Endpoint Policy Server bring?

- A. Heartbeat and synchronization requests

- Answer: A**
