

Pass Guaranteed 2025 C-IBP-2502: Newest New SAP Certified Associate - SAP IBP for Supply Chain Test Pdf

P.S. Free 2025 SAP C-IBP-2502 dumps are available on Google Drive shared by GetValidTest: https://drive.google.com/open?id=1xIk3Pfw_FW-nRWiXiAXSiJDNOPSgHuZC

Our C-IBP-2502 training materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the C-IBP-2502 study guide. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our C-IBP-2502 Exam Questions are popular among candidates. we have strong strenght to support our C-IBP-2502 practice engine.

In order to let you have a deep understanding of our C-IBP-2502 learning guide, our company designed the free demos for our customers. We will provide you with free demos of our study materials before you buy our products. If you want to know our C-IBP-2502 training materials, you can download them from the web page of our company. If you use the free demos of our C-IBP-2502 study engine, you will find that our products are very useful for you to pass your C-IBP-2502 exam and get the certification.

2025 Useful New C-IBP-2502 Test Pdf Help You Pass C-IBP-2502 Easily

Candidates who want to be satisfied with the SAP Certified Associate - SAP IBP for Supply Chain (C-IBP-2502) preparation material before buying can try a free demo. Customers who choose this platform to prepare for the SAP C-IBP-2502 Exam require a high level of satisfaction. For this reason, GetValidTest has a support team that works around the clock to help C-IBP-2502 applicants find answers to their concerns.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following is a feature of Transportation Load Building (TLB)?

- A. It uses rule-based planning to create transportation loads
- B. Loads are calculated based on transportation lanes and modes of transport
- C. Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts
- D. Loads are calculated based on the minimum utilization of equipment

Answer: A

Explanation:

Transportation Load Building (TLB) in SAP IBP (part of Supply Chain Control Tower or integration with SAP TM) optimizes the consolidation of shipments into transportation loads based on constraints like capacity and rules.

* Option A: Loads are calculated based on transportation lanes and modes of transport This is partially true but not the defining feature. TLB considers lanes and modes (e.g., truck, rail) as inputs, but its core function is grouping shipments, not merely calculating

based on these. It's too generic to be the standout feature.

* Option B: Loads are integrated into SAP ERP or SAP S/4HANA as distribution receipts. This is incorrect. TLB focuses on planning loads within SAP IBP or TM, not direct integration into ERP

/S4HANA as "distribution receipts." Integration might occur downstream, but it's not a TLB feature.

* Option C: It uses rule-based planning to create transportation loads. This is correct. TLB employs configurable rules (e.g., maximum weight, volume, compatibility) to consolidate shipments into loads.

For example, it might ensure a truck's capacity is fully utilized while respecting delivery windows, a hallmark of TLB in SAP IBP's supply planning capabilities, as per official documentation.

* Option D: Loads are calculated based on the minimum utilization of equipment. This is incorrect.

TLB aims to maximize, not minimize, equipment utilization to reduce costs. Minimum utilization might be a constraint, but it's not the calculation basis.

Thus, C is the defining feature of TLB, reflecting its rule-based approach, consistent with SAP IBP's supply chain optimization tools.

NEW QUESTION # 60

Model configuration allows the attributes of a master data type to be assigned as key figures. Which feature is relevant for this type of object?

- A. This type of key figure is not usually stored and it cannot be editable
- **B. This object usually provides a single value for a unique planning combination**
- C. This type of key figure has better performance than a time-independent key figure
- D. This object contains user-defined criteria that monitor the running of business plans

Answer: B

Explanation:

In SAP IBP, the "Attribute as Key Figure" feature allows master data attributes (e.g., Product Category) to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: This type of key figure is not usually stored and it cannot be editable. This is incorrect.

Attribute key figures are stored (sourced from master data) and can be editable if configured as such, not inherently non-editable.

* Option B: This type of key figure has better performance than a time-independent key figure. This is incorrect. Performance depends on usage, not a guaranteed advantage over other time-independent key figures.

* Option C: This object usually provides a single value for a unique planning combination. This is correct. An attribute key figure (e.g., Product Price) provides one static value per planning combination (e.g., PERPROD), a defining feature, per SAP IBP's configuration guides.

* Option D: This object contains user-defined criteria that monitor the running of business plans. This is incorrect. This describes alerts or KPIs, not attribute key figures.

Thus, C is the relevant feature, per SAP IBP's official definition.

NEW QUESTION # 61

What is a feature of the weighted average key figure calculation?

- A. Attributes can be used in weighted average key figure calculation
- B. The numerator of the calculation should be stored
- C. The first parameter of the formula acts as a weight
- **D. The numerator's value should include multiplication by the weight**

Answer: D

Explanation:

Weighted average calculations in SAP IBP (e.g., $KF3 = \text{SUM}(KF1 * KF2) / \text{SUM}(KF2)$) use a weight key figure, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: The numerator of the calculation should be stored. This is incorrect. The numerator (e.g., value * weight) is calculated, not necessarily stored.

* Option B: The first parameter of the formula acts as a weight. This is incorrect. The weight is explicitly defined (e.g., KF2), not assumed as the first parameter.

* Option C: Attributes can be used in weighted average key figure calculation. This is incorrect.

Attributes as key figures provide static values, but weights are typically key figures, not attributes directly.

* Option D: The numerator's value should include multiplication by the weight. This is correct. In a weighted average (e.g., $(KF1 * KF2) / \text{SUM}(KF2)$), the numerator multiplies the value (KF1) by the weight (KF2), a defining feature, per SAP IBP's calculation

rules.

Thus, D is the correct feature, per SAP IBP's official calculation logic.

NEW QUESTION # 62

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports simulating the effect of the changes
- B. It supports sharing with other users or user groups
- C. It supports embedding analytic stories as a workspace component
- D. It supports favorites created in SAP IBP, add-in for Microsoft Excel

Answer: C,D

Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.

* Option B: It supports favorites created in SAP IBP, add-in for Microsoft Excel This is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.

* Option C: It supports embedding analytic stories as a workspace component This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

* Option D: It supports sharing with other users or user groups This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

NEW QUESTION # 63

What are some of the actions configurators can do when working with versions? Note: There are 2 correct answers to this question.

- A. Copy key figure data from any version to any version
- B. Run an application job to purge obsolete versions
- C. Delete key figure data for a date range for all versions at once
- D. Copy master data from base version to other version

Answer: A,D

Explanation:

Versions in SAP IBP (e.g., baseline, scenario) allow what-if planning, with configurators managing data across them, per SAP IBP's version management documentation.

* Option A: Delete key figure data for a date range for all versions at once This is incorrect. Purge jobs delete data per version, not across all versions simultaneously in one action.

* Option B: Copy key figure data from any version to any version This is correct. The Copy Operator can transfer key figure data between any versions (e.g., baseline to scenario), a standard feature, per SAP IBP's documentation.

* Option C: Copy master data from base version to other version This is correct. Master data can be copied from the base version to other versions via the Manage Versions app or data integration, per SAP IBP's version setup.

* Option D: Run an application job to purge obsolete versions This is incorrect. Versions are managed manually or via expiration, but there's no specific job to "purge obsolete versions"; data purging is separate.

Thus, B and C are valid actions, per SAP IBP's official version capabilities.

NEW QUESTION # 64

.....

C-IBP-2502 Exam Lab Questions: <https://www.getvalidtest.com/C-IBP-2502-exam.html>

It would be extremely difficult for any equipment belonging to the C-IBP-2502 phone company to figure out what voice belongs with which conversation, so the signal is modified before it's bound to other signals.

GetValidTest proudly presents you with an C-IBP-2502 exam dumps that carry actual SAP C-IBP-2502 questions.

- P.S. Free 2025 SAP C-IBP-2502 dumps are available on Google Drive shared by GetValidTest: <https://drive.google.com/open?>
