

Pass Guaranteed 2025 C-TS470-2412: Updated SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Exam Labs

BTW, DOWNLOAD part of BraindumpsIT C-TS470-2412 dumps from Cloud Storage: <https://drive.google.com/open?id=1gBmYFJjgTPzasks288fPnBVQu7eYH1Zq>

This format of our C-TS470-2412 product is easiest to use due to its compatibility with web-browsers. This handy feature makes it your go-to online platform to evaluate your preparation. Conceptual and tough C-TS470-2412 questions will prompt on your screen which will test your true concepts. SAP Certification Exams Questions taken from past papers will also be given to give you a brief idea of the actual difficulty level of the SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service (C-TS470-2412) exam. Its large question bank prepares you to ace your exam with ease and it will also help you to pinpoint your mistakes and weaknesses and work on them.

SAP C-TS470-2412 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.
Topic 2	Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Topic 3	• Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 4	• Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.

Fantastic C-TS470-2412 Exam Labs – Find Shortcut to Pass C-TS470-2412 Exam

According to the statistics shown in the feedback chart, the general pass rate for latest C-TS470-2412 test prep is 98%, which is far beyond that of others in this field. In recent years, our C-TS470-2412 exam guide has been well received and have reached 99% pass rate with all our dedication. As one of the most authoritative question bank in the world, our study materials make assurance for your passing the C-TS470-2412 Exam.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q41-Q46):

NEW QUESTION # 41

What can you display in the app Find Technical Object? Note: There are 3 correct answers to this question.

- A. Installation information of the technical objects
- B. Measurement documents and measuring points of the technical objects
- C. Planned and call dates for recurring service activities
- D. System and user statuses of the technical objects
- E. Service costs of the technical objects

Answer: A,B,D

Explanation:

TheFind Technical Objectapp in SAP S/4HANA Cloud Private Edition, Service provides details about technical objects (e.g., equipment, functional locations). The correct answers areA, B, C. Let's explore.

App Functionality:

This Fiori app allows users to search and view technical object data.

* Installation information (A):Shows where the object is installed (e.g., functional location hierarchy).

* Measurement documents and measuring points (B):Displays recorded measurements (e.g., temperature) and their points.

* System and user statuses (C):Lists statuses (e.g., "INST" for installed, user status "In Repair").

Why Not the Others?

* D:Service costs are in financial apps (e.g., Service Actuals), not this app.

* E:Planned/call dates are in maintenance plan apps, not here.

Example:

Search equipment "E001" # See installation (FL-001), measuring point (Temp), status (INST).

"The Find Technical Object app displays installation information, measurement documents and points, and system/user statuses."

NEW QUESTION # 42

What are steps included in the planning and execution of a recurring inspection? Note: There are 2 correct answers to this question.

- A. When accepting a service order quotation, the system automatically creates a maintenance plan.
- B. A service order is automatically generated by scheduling the maintenance plan for the inspection.

- C. A completion marks a service order and its corresponding planned date in the maintenance plan as finished.
- D. A service order is automatically generated when activating the maintenance plan for the inspection.

Answer: B,C

Explanation:

Recurring inspection in SAP S/4HANA Cloud Private Edition, Service uses a maintenance plan to schedule periodic checks. The correct steps are A and B. Let's explore this in detail.

Recurring Inspection Overview:

This process involves scheduling inspections via a maintenance plan, generating service orders, and completing them to update the plan.

* A completion marks a service order and its corresponding planned date in the maintenance plan as finished (A): When a service order (the call object) is completed (e.g., status "Technically Completed"), the system updates the maintenance plan, marking the corresponding planned date as finished. This shifts the scheduling to the next cycle (e.g., via transaction IP10).

* A service order is automatically generated by scheduling the maintenance plan for the inspection (B): Scheduling the maintenance plan (e.g., via IP10 or a background job) generates a service order based on the plan's cycle and call horizon. This order contains the inspection tasks.

Why Not the Others?

* C: Accepting a quotation creates a contract or order, not a maintenance plan, which is a separate planning object.

* D: Activating a maintenance plan sets it up but doesn't generate orders; scheduling does that.

Detailed Flow:

* Maintenance plan created with inspection cycle (e.g., every 6 months).

* Scheduling (IP10) generates a service order when the call date is reached.

* Order completed # Plan updated, next call scheduled.

"Recurring inspections involve scheduling a maintenance plan to automatically generate service orders, with completion updating the plan's planned dates."

NEW QUESTION # 43

What are possible steps in an in-house repair process in SAP S/4HANA Cloud Private Edition, Service? Note:

There are 3 correct answers to this question.

- A. Generate a repair object based on the repair order status.
- B. Create an in-house repair for a repair request from a customer.
- C. Post a goods receipt for a returned object.
- D. Create an in-house repair after a pre-check for a repair object.
- E. Perform a pre-check for an in-house repair and make a decision.

Answer: B,C,E

Explanation:

The in-house repair process (scope item 3XK) in SAP S/4HANA Cloud Private Edition, Service involves handling customer repair requests and processing returned objects. Key steps include:

* Perform a pre-check for an in-house repair and make a decision: A pre-check assesses the repair object's condition to decide whether to proceed with repair, reject it, or take other actions. This is a standard initial step.

* Post a goods receipt for a returned object: When a customer returns a defective item, a goods receipt is posted (e.g., via transaction MIGO or a service order), creating a repair object in the system.

* Create an in-house repair for a repair request from a customer: This step involves creating a repair order (e.g., transaction type REPA) based on a customer's request, initiating the process.

* Generate a repair object based on the repair order status: Repair objects are not generated from order status; they are created upon goods receipt or manually.

* Create an in-house repair after a pre-check for a repair object: While a pre-check precedes repair, the repair order is typically created first, not after the pre-check as a separate step. These steps align with the SAP Best Practices for in-house repair. "The in-house repair process includes performing a pre-check, posting goods receipt for returns, and creating a repair order based on customer requests." (SAP Signavio Process Navigator, In-House Repair).

NEW QUESTION # 44

When extending a functional location hierarchy, how is a new functional location initially assigned to it?

- A. Manually by using the list editing transaction

- B. Manually by using the install function
- **C. Automatically based on the structure indicator**
- D. Automatically based on the functional location category

Answer: C

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, a functional location hierarchy organizes technical objects in a structured manner. When adding a new functional location, it is automatically assigned based on the structure indicator (Option B).

The structure indicator defines the naming convention and hierarchy levels (e.g., A-B-C for a three-level structure). When a new functional location is created, the system uses this indicator to place it in the hierarchy automatically, based on its ID (e.g., A-B becomes a child of A).

* A: The category defines properties, not the hierarchy position.

* C: List editing is for mass changes, not initial assignment.

* D: The install function is for equipment, not functional locations.

"A new functional location is automatically assigned to the hierarchy based on the structure indicator, which governs the hierarchical naming and positioning."

NEW QUESTION # 45

Which of the following can you assign to a work center? Note: There are 2 correct answers to this question.

- A. Planner group
- B. Maintenance planning plant
- **C. Capacity category**
- **D. Task list usage**

Answer: C,D

Explanation:

Work centers in SAP S/4HANA Service (and Plant Maintenance) define execution locations and capacities:

* Task list usage: Specifies which task lists (e.g., service or maintenance) the work center can use, assigned in the work center master data (transaction CR01).

* Capacity category: Defines the type of capacity (e.g., labor, machine) available at the work center, critical for scheduling.

* Planner group: Assigned to technical objects or orders, not directly to work centers.

* Maintenance planning plant: A work center is assigned to a plant during creation, but the plant itself isn't assigned to the work center as a customizable attribute. These settings are configured in the work center master record. "Assign task list usage and capacity categories to a work center to define its operational scope." (SAP Help Portal, Work Center Master Data).

NEW QUESTION # 46

.....

You may find that there are a lot of buttons on the website which are the links to the information that you want to know about our C-TS470-2412 exam braindumps. Also the useful small buttons can give you a lot of help on our C-TS470-2412 study guide. Some buttons are used for hide or display answers. What is more, there are extra place for you to make notes below every question of the C-TS470-2412 practice quiz. Don't you think it is quite amazing? Just come and have a try!
