Chrome-Enterprise-Administrator Practice Materials: Professional Chrome Enterprise Administrator Certification Exam and Chrome-Enterprise-Administrator Study Guide - ExamcollectionPass

Our Chrome-Enterprise-Administrator practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. So their perfection is unquestionable. As a result, Chrome-Enterprise-Administrator real exam win worldwide praise and acceptance. Our Chrome-Enterprise-Administrator practice materials are determinant factors giving you assurance of smooth exam. The sooner you make up your mind, the more efficient you will win.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12

An administrator is modifying a policy at the top-level organizational unit (OU), and there is an OU below that should not accept this modification. What can the administrator do to be certain of this*?

- A. Set policy precedence to Child > Parent
- B. Set the policy to locally applied at the child OU
- C. Turn off inheritance for all policies

- D. Set the policy to locally applied at the parent OU

Answer: B

Explanation:

To prevent a child OU from inheriting a policy set at a parent OU, the administrator needs to configure the policy within the child OU itself and set its inheritance status to "Locally applied." This explicitly overrides the inherited policy from the parent with a specific setting for the child OU. Setting it to locally applied at the parent would not prevent inheritance. Turning off inheritance entirely might not be desired for other policies, and "Child > Parent" is the default precedence when inheritance is enabled.

NEW QUESTION # 13

An organization has a critical extension that is force-installed on managed Chrome browsers to meet specific security needs. Additionally, the organization has specified that when extensions are unpublished from the Chrome Web Store, they are also disabled. The extension has been taken over by a malicious actor and has been unpublished from the Chrome Web Store. What impact will this have to the force-installed extension?

- A. The force-installed extension will observe no change
- B. The force-installed extension will be disabled for existing users only
- C. The admin will receive an alert in the Google Admin console to remediate the conflict
- D. The force-installed extension will automatically be disabled

Answer: D

Explanation:

If an extension that is force-installed via policy is unpublished from the Chrome Web Store, the Chrome browser will detect this status and automatically disable the extension on managed devices. This is a security mechanism to prevent the continued use of potentially compromised or no longer maintained extensions.

NEW QUESTION # 14

A systems engineer recently cloud enrolled Chrome browsers, which were previously managed via group policy, and deployed a policy through Chrome Enterprise Core. However, the policy is not applying. After validating the policy via `chrome://policy`, the status shows a warning conflict. What is the best way to resolve this issue?

- A. Check and configure the precedence order
- B. Re-enroll the Chrome browser to reset the policy
- C. Restart the computer to apply the policy changes
- D. Adjust the policy merge list setting

Answer: A

Explanation:

A "warning conflict" in `chrome://policy` indicates that multiple policy sources are trying to control the same setting. Since the browsers were previously managed by Group Policy, there's likely a conflict between the cloud policy and the local Group Policy. The best way to resolve this is to **check and configure the precedence order** of policy sources. Ensure that Cloud Policy is set to have the desired precedence over Group Policy if that's the intention. Restarting the computer might apply existing policies but won't resolve the conflict in precedence. Adjusting a "policy merge list setting" is not a standard term for resolving this type of conflict. Re-enrolling might give a fresh start but doesn't address the underlying conflict in policy sources.

NEW QUESTION # 15

A company is reviewing the permissions of extensions that are popular among employees. The security team wants to make sure all extensions in the environment have these capabilities disabled:

- * Modify to internal home page: `internal.acme.com`
- * Access to the storage
- * Access to history

Which actions should be taken in the company default extension Permissions and URLs fields to meet the security team's requirements?

- A. Add `internal.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission

- B. Add `internal.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- **C. Add `\*.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission**
- D. Add `\*.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission

Answer: C

Explanation:

To prevent extensions from modifying the internal homepage, the administrator should add `\*.acme.com` to the "Runtime blocked hosts" list. The wildcard `\*` ensures that any attempt to access or modify this domain by an extension will be blocked at runtime. Additionally, to disable access to storage and history, the administrator needs to explicitly disable the "Storage" and "History" permissions within the extension management settings. Therefore, the correct combination is to block the host and disable the permissions.

NEW QUESTION # 16

A company has Chrome browser settings applied via a ChromeOS user policy. The Chrome administrator needs to deploy a new setting that will override the existing ChromeOS user setting if there is a conflict. What should the administrator use?

- A. Chrome Flags
- B. Chrome component updates
- **C. Machine Cloud level policy**
- D. Enterprise Default policy

Answer: C

Explanation:

To override a ChromeOS user policy, the administrator should deploy a policy at the **Machine Cloud level**. Machine-level policies have a higher precedence than user-level policies on ChromeOS devices.

"Enterprise Default" is a general policy level and might not override user settings. Chrome Flags are experimental features and not intended for policy management. Chrome component updates manage specific browser components, not policy settings.

NEW QUESTION # 17

.....

Our content and design of the Chrome-Enterprise-Administrator exam questions have laid a good reputation for us. Our users are willing to volunteer for us. You can imagine this is a great set of Chrome-Enterprise-Administrator learning guide! Next, I will introduce you to the most representative advantages of Chrome-Enterprise-Administrator Real Exam. You can think about whether these advantages are what you need! First, we have high pass rate as 98% to 100% which is unique in the market. Secondly, the price of the Chrome-Enterprise-Administrator study materials is favourable.
