Fortinet FCP - FortiSIEM 7.2 Analyst Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which items are used to define a subpattern?

- A. Filters, Group By, Threshold definitions
- B. Filters, Threshold, Time Window definitions
- C. Filters, Aggregate, Time Window definitions
- D. Filters, Aggregate, Group By definitions

Answer: D

Explanation:

A subpattern in FortiSIEM is defined using Filters to match specific events, Aggregate conditions to apply statistical thresholds (e.g., COUNT), and Group By attributes to segment data for evaluation. These three components collectively determine how the subpattern functions.

An analyst wants the rule shown in the exhibit to trigger when three failed login attempts occur within three minutes. What should the values be for the condition time window and aggregate count?

- A. Time window 90 seconds, aggregate count 2
- B. Time window 90 seconds, aggregate count 3
- C. Time window 180 seconds, aggregate count 3
- D. Time window 180 seconds, aggregate count 2

Answer: C

Explanation:

To detect three failed login attempts within three minutes, you must set the aggregate count to 3 in the subpattern and the time window to 180 seconds in the rule condition. This ensures the rule triggers only if three or more failed logins occur in that timeframe.

Which section contains the subpattern configuration that determines how many matching events are needed to trigger the rule?

- A. Aggregate
- B. Group By
- C. Actions
- D. Filters

Answer: A

Explanation:

The Aggregate section contains the condition COUNT(Matched Events) >= 1, which defines how many events must match the filter criteria for the rule to trigger. This is the subpattern configuration that determines the event threshold.

NEW QUESTION # 18

Refer to the exhibit.

Which two lookup types can you reference as the subquery in a nested analytics query? (Choose two.)

- A. Event Query
- B. CMDB Query
- C. SNMP Query
- D. LDAP Query

Answer: A,C

Explanation:

In FortiSIEM nested analytics queries, you can reference both CMDB Queries and Event Queries as subqueries. These allow correlation between CMDB data and event data for advanced detection use cases.

NEW QUESTION # 19

Refer to the exhibit.

Source IP	Reporting Device	Reporting IP	Event Type	User	Count
15.2.3.4	FW01	10.1.1.1	Logon	Mike	4
21.3.4.5	FW01	10.1.1.1	Logon	Bob	3
14.12.3.1	FW01	10.1.1.1	Logon	Alice	2

If you group the events by User, Source IP, and Count attributes, how many results will FortiSIEM display?

- A. Three
- B. Five
- C. Six
- D. Two
- E. Four

Answer: C

Explanation:

Grouping by User, Source IP, and Count means that each unique combination of those three attributes will be treated as a separate result. In the table, all six rows have distinct combinations of User, Source IP, and Count - so FortiSIEM will display 6 results.
