2025 JN0-232 Valid Dumps Ebook - Latest Juniper JN0-232 Exam Dumps Free: Security, Associate (JNCIA-SEC)

If only you provide the scanning copy of the JN0-232 failure marks we will refund you immediately. If you have any doubts about the refund or there are any problems happening in the process of refund you can contact us by mails or contact our online customer service personnel and we will reply and solve your doubts or questions timely. We provide the best service and JN0-232 Test Torrent to you to make you pass the exam fluently but if you fail in we will refund you in full and we won't let your money and time be wasted. Our questions and answers are based on the real exam and conform to the popular trend in the industry.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q26-Q31):

NEW QUESTION # 26

You are modifying the NAT rule order and you notice that a new NAT rule has been added to the bottom of the list. In this situation, which command would you use to reorder NAT rules?

- A. run
- B. insert
- C. top

- D. up

Answer: C

Explanation:

In Junos OS, NAT rules are evaluated intop-down order. When a new rule is added, it is placed at thebottom of the rule set by default.

- * To move a rule to the top of the rule set, the command is:
- * set security nat source rule-set <name> rule <rule-name> top
- * Option A (top):Correct. Moves the specified rule to the top of the list.
- * Option B (run):Used to execute operational commands, not rule reordering.
- * Option C (up):Not valid for reordering NAT rules.
- * Option D (insert):Not a supported NAT reordering command in Junos.

Correct Command:top

Reference:Juniper Networks -NAT Rule Evaluation Order and Rule Reordering, Junos OS Security Fundamentals.

NEW QUESTION # 27

Which two statements about destination NAT are correct? (Choose two.)

- A. SRX Series Firewalls support interface-based destination NAT.
- B. Destination NAT enables hosts on the Internet to access resources on a private network.
- C. Destination NAT enables hosts on a private network to access resources on the Internet.
- D. SRX Series Firewalls support pool-based destination NAT.

Answer: B,D

Explanation:

* Destination NAT purpose (Option C):Used to allow external hosts on the Internet to access internal /private resources (such as a web server in the DMZ). Destination NAT changes the destination IP of incoming traffic to match the internal server.

* Pool-based NAT (Option D):SRX supports destination NAT pools, allowing multiple public IP addresses or ranges to be translated to internal servers.

* Incorrect options:

- * Option A describessource NAT, not destination NAT.
- * Option B is incorrect because SRX does not support "interface-based" destination NAT.

Correct Statements:C and D

Reference:Juniper Networks -NAT Types and Configurations (Source, Destination, and Static), Junos OS Security Fundamentals.

NEW QUESTION # 28

Content filtering supports which two of the following protocols? (Choose two.)

- A. HTTP
- B. SNMP
- C. TFTP
- D. SMTP

Answer: A,D

Explanation:

Content filtering on SRX devices inspects and controls specific file types transferred across certain application protocols:

- * SMTP (Option A):Supported. Content filtering can block specific file attachments in emails.
- * HTTP (Option D):Supported. Content filtering can block downloads of specific file types over web traffic.
- * SNMP (Option B):Not supported; SNMP is a management protocol, not a content delivery protocol.
- * TFTP (Option C):Not supported by content filtering.

Correct Protocols:SMTP and HTTP

Reference:Juniper Networks -Content Security and Filtering Supported Protocols, Junos OS Security Fundamentals.

NEW QUESTION # 29

Click the Exhibit button.

```
[edit security policies from-zone Trust to-zone Untrust]
user@SRX# show
policy policy1 {
  match {
    source-address any;
    destination-address any;
    application junos-http;
  }
  then {
    permit;
  }
}
policy policy2 {
  match {
    source-address any;
    destination-address any;
    application junos-https;
  }
  then {
    permit;
  }
}
policy policy3 {
  match {
    source-address any;
    destination-address any;
    application junos-http;
  }
  then {
    deny;
  }
}
```

Referring to the exhibit, which statement is correct?

- A. policy3 will be shadowed because it matches the same application as policy1.
- B. policy1 will be shadowed because it matches the same application as policy3.
- C. None of the policies will be shadowed.
- D. policy2 will be shadowed because it matches the same application as policy1.

Answer: A

Explanation:

Juniper SRX evaluates security policies in order, top to bottom. The first matching policy determines the action, and no further policies are evaluated. This behavior can lead to shadowed policies if later policies match the same conditions as earlier ones.

From the exhibit:

- * Policy1: Matches application junos-http and permits traffic.
- * Policy2: Matches application junos-https and permits traffic.
- * Policy3: Matches application junos-http again, but denies traffic.

Since policy1 already matches all HTTP traffic and permits it, traffic never reaches policy3. This makes policy3 shadowed because it has the same match condition as policy1 but is evaluated later in the list.

Other options:

- * Policy1 is not shadowed because it is evaluated first.
- * Policy2 is independent (application = HTTPS) and therefore unaffected.
- * Only policy3 is shadowed by policy1.

Correct Statement: Policy3 will be shadowed because it matches the same application as policy1.

Reference: Juniper Networks - Security Policy Evaluation Order and Shadowed Policies, Junos OS Security Fundamentals.

NEW QUESTION # 30

Which two statements are true about the NextGen Web Filtering (NGWF) feature on an SRX Series device? (Choose two.)

- A. The NGWF feature consults your local lists before consulting the Juniper cloud.
- B. The NGWF feature requires a license.
- C. The NGWF feature consults the Juniper cloud before consulting your local lists.
- D. The NGWF feature does not require a license.

Answer: A,B

Explanation:

* License Requirement (Option B):NextGen Web Filtering (NGWF) is a licensed feature on SRX devices. Without a license, the service cannot operate.

* Local vs. Cloud Lists (Option C):NGWF checkslocal block/allow lists first. If the URL does not match locally, the request is then checked against the Juniper cloud database.

* Option A:Incorrect, since the cloud is only consulted if the URL is not in the local list.

* Option D:Incorrect, as NGWF requires a valid subscription/license.

Correct Statements:NGWF requires a license, and it checks local lists before cloud lookup.

Reference:Juniper Networks -UTM Web Filtering Types (NextGen Web Filtering), Junos OS Security Fundamentals.

NEW QUESTION # 31

.....

We can calculate that JN0-232 certification exam is the best way by which you can learn new applications, and tools and mark your name in the list of best employees in your company. You don't have to be dependent on anyone to support you in your professional life, but you have to prepare for Test4Sure real Security, Associate (JNCIA-SEC) (JN0-232) exam questions.
