If you are still troubled for the NCLEX NCLEX-RN Certification Exam, then select the NewPassLeader's training materials please. NewPassLeader's NCLEX NCLEX-RN exam training materials is the best training materials, this is not doubt. Select it will be your best choice. It can guarantee you 100% pass the exam. Come on, you will be the next best IT experts.

NCLEX-RN exam is an important step in the process of becoming a registered nurse. After completing a nursing program, candidates must apply to their state board of nursing to take the exam. Once they pass the exam and meet other licensure requirements, they can practice as a registered nurse. NCLEX-RN exam is designed to ensure that only qualified individuals are licensed to practice nursing, which helps to protect the public and maintain the integrity of the nursing profession.

NCLEX-RN exam is computerized and adaptive, meaning that the difficulty level of the exam adjusts based on a nurse's performance. NCLEX-RN Exam is designed to be challenging, and many nurses find it to be a stressful experience. However, the NCLEX-RN is an essential step for nurses who wish to enter the workforce and begin practicing as registered nurses. With proper preparation and study, nurses can feel confident and well-prepared to pass the exam and begin their careers in nursing.

The Safe and Effective Care Environment category covers topics such as management of care, infection control, and safety and quality improvement. The Health Promotion and Maintenance category includes areas such as disease prevention, health promotion, and early detection of illness. The Psychosocial Integrity category deals with patient and family-centered care, cultural diversity, and mental health. The Physiological Integrity category covers topics such as basic care and comfort, pharmacological and parenteral therapies, and reduction of risk potential.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q838-Q843):

NEW QUESTION # 838

A 5-year-old child is hospitalized for an acute illness. The nurse encourages the family to bring her favorite objects from home. What is the nurse's rationale?

- A. To establish a trusting relationship
- B. To keep the child calm
- C. To prevent or minimize separation anxiety
- D. To reduce fear of the unknown

Answer: C

Explanation:

Explanation/Reference:

Explanation:

(A) Objects from home do not reduce fear of the unknown. Children need explanations, reassurance, and preparation for the unknown. Also, parental presence can promote comfort and feelings of security. (B) A calm, relaxed, and reassuring manner will assist in calming the child. The child's objects from home will not assist in calming the child. (C) A trusting relationship is based on the quality of the nurse-client relationship.

Objects from home have no impact. (D) Favorite objects from home assist in creating a familiar setting. Also, these objects may prevent or minimize separation from the child's usual routine and family support.

NEW QUESTION # 839

A 54-year-old client is admitted to the hospital with a possible gastric ulcer. He is a heavy smoker. When discussing his smoking habits with him, the nurse should advise him to:

- A. Smoke low-tar, filtered cigarettes
- B. Chew gum instead
- C. Smoke only right after meals
- D. Smoke cigars instead

Answer: C

Explanation:

(A, B, D) Cigarettes, cigars, and chewing gum would stimulate gastric acid secretion. (C) Smoking on a full stomach minimizes effect of nicotine on gastric acid.

NEW QUESTION # 840

A gravida 2 para 1 client is hospitalized with severe preeclampsia. While she receives magnesium sulfate (MgSO₄) therapy, the nurse knows it is safe to repeat the dosage if:

- A. MgSO₄ serum levels are >15 mg/dL

- B. Deep tendon reflexes are absent
- C. Urine output is 20 mL/hr
- D. Respirations are >16 breaths/min

Answer: D

Explanation:

Explanation/Reference:

Explanation:

(A) MgSO₄ is a central nervous system depressant. Loss of reflexes is often the first sign of developing toxicity. (B) Urinary output at <25 mL/hr or 100 mL in 4 hours may result in the accumulation of toxic levels of magnesium. (C) The therapeutic serum range for MgSO₄ is 6-8 mg/dL. Higher levels indicate toxicity.

(D) Respirations of >16 breaths/min indicate that toxic levels of magnesium have not been reached.

Medication administration would be safe.

NEW QUESTION # 841

Stat serum electrolytes ordered for a client in acute renal failure revealed a serum potassium level of 6.4. The physician is immediately notified and orders 50 mL of dextrose and 10 U of regular insulin IV push. The nurse administering these drugs knows the Rationale for this therapy is to:

- A. Protect the myocardium from the effects of hypokalemia
- B. Remove the potassium from the body by renal exchange
- C. Promote rapid protein catabolism
- D. Drive potassium from the serum back into the cells

Answer: D

Explanation:

Section: Questions Set G

Explanation:

(A) Sodium polystyrene sulfonate (Kayexalate), a cation exchange resin, exchanges sodium ions for potassium ions in the large intestine reducing the serum potassium. (B) Calcium is administered to protect the myocardium from the adverse effects of hyperkalemia. Serum levels reflect hyperkalemia. (C) Rapid catabolism releases potassium from the body tissue into the bloodstream. Infection and hyperthermia increase the process of catabolism. (D) The administration of dextrose and regular insulin IV forces potassium back into the cells decreasing the potassium in the serum.

NEW QUESTION # 842

A 7-year-old girl has been diagnosed with juvenile arthritis and has been placed on daily aspirin. Which statement made by the parent indicates a need for further teaching?

- A. "I give her aspirin on a regular schedule every day."
- B. "Her gums have been bleeding frequently. Maybe she is brushing too hard."
- C. "My daughter takes her aspirin with her meals."
- D. "One sign of aspirin toxicity can be ringing in the ears."

Answer: B

Explanation:

Explanation

(A) Aspirin should not be given on an empty stomach because it is irritating to the mucosa. (B) Bleeding from decreased clotting capacity may be caused by aspirin toxicity. (C) A regular schedule of aspirin administration is important to maintain a satisfactory drug level in the body. (D) Aspirin toxicity may affect cranial nerve VIII, leading to tinnitus (ringing in the ears).
