

Pass Guaranteed 2025 NFPA Efficient CFPS: Certified Fire Protection Specialist (CFPS) Exam Discount

P.S. Free & New CFPS dumps are available on Google Drive shared by Exam4Tests: https://drive.google.com/open?id=1WSY0rmuwW4_mdLFDsLKV2D3NEt47XHlf

The exact replica of the real NFPA CFPS exam questions is another incredible feature of the web-based practice test software. With this, you can kill your NFPA CFPS exam anxiety. Another format of the Certified Fire Protection Specialist (CFPS) (CFPS) practice test material is the CFPS desktop practice exam software. All traits of the web-based CFPS practice test are present in this version.

Since the CFPS study quiz is designed by our professionals who had been studying the exam all the time according to the changes of questions and answers. Our CFPS simulating exam is definitely making your review more durable. To add up your interests and simplify some difficult points, our experts try their best to simplify our CFPS Study Material and help you understand the learning guide better.

Free PDF Quiz 2025 NFPA Efficient CFPS Exam Discount

Choosing valid NFPA dumps means closer to success. Before you buy our products, you can download the free demo of CFPS test questions to check the accuracy of our dumps. Besides, there are 24/7 customer assisting to support you in case you may have any questions about CFPS Dumps PDF or download link.

NFPA Certified Fire Protection Specialist (CFPS) Sample Questions (Q106-Q111):

NEW QUESTION # 106

For standpipe systems containing 1 1/2 - 2 1/2 in. (40 - 65 mm) hose connection outlets without preconnected hose, a pressure regulating device is required when pressure exceeds

- A. 125 psi (862 kPa).
- **B. 175 psi (1207 kPa).**
- C. 100 psi (689 kPa).
- D. 150 psi (1034 kPa).

Answer: B

Explanation:

. 175 psi (1207 kPa).

For standpipe systems containing 1 1/2 - 2 1/2 in. (40 - 65 mm) hose connection outlets without preconnected hose, a pressure regulating device is required when the pressure exceeds 175 psi (1207 kPa), according to NFPA 14, Standard for the Installation of Standpipe and Hose Systems, 2019 edition. This requirement applies to Class I and Class III standpipe systems, which are intended

for use by fire department personnel or trained occupants. A pressure regulating device is a device that automatically reduces and controls the pressure of the water flowing through the hose connection outlet to a predetermined value. This device helps to prevent excessive pressure that could damage the hose, nozzle, or fittings, or cause difficulty in handling the hose stream.²³ Reference: NFPA 14: Standard for the Installation of Standpipe and Hose Systems 1 Standpipe System Design and Calculations | NFPA | NFPA 2 ENGINE COMPANY STANDPIPE OPERATIONS:PRESSURE-REGULATING DEVICES 3

NEW QUESTION # 107

What three items are considered when determining the domestic supply requirements on public water systems?

- A. Average daily demand, peak weekly demand, and reservoir maximum capacity
- B. Weekly demand, peak demand, and average daily demand
- C. Peak hourly demand, maximum water flow, and Largest single user demand
- D. Average daily demand, maximum daily demand, and peak hourly demand

Answer: A

NEW QUESTION # 108

Fire tests typically relate to two types of fire properties, fire resistance and

- A. length of fire.
- B. reaction to fire.
- C. smoke spread.
- D. flame spread.

Answer: B

Explanation:

Explanation

Fire tests typically relate to two types of fire properties, fire resistance and reaction to fire. Fire resistance is the ability of a building element or component to prevent the passage of heat and flames from one side to another, while reaction to fire is the response of a material or product in contributing to the development and spread of a fire. Fire resistance tests are usually performed on systems or assemblies, such as walls, floors, doors, or windows, while reaction to fire tests are usually performed on materials or products, such as sealants, insulation, cladding, or plastics. References: International Standards and Classifications for Fire Testing - Sika; Testing for Fire Resistance and Reaction to Fire - ICC NTA; 'Reaction to Fire' Vs 'Fire resistance' - Ask HILTI; What is the difference between Reaction to Fire and Resistance to Fire ...; Reaction to Fire vs Resistance to Fire | Nullfire UK

NEW QUESTION # 109

In a large-scale test organized by the Fire Protection Research Foundation (FPRF) to study the interaction between sprinklers, roof vents, and draft curtains, what factor made the test results difficult to interpret for use in field applications?

- A. External environmental forces on the test building
- B. The number of vents used during the tests
- C. The use of an exhaust to an abatement system
- D. The controlled nature of the tests

Answer: C

Explanation:

Explanation

The use of an exhaust to an abatement system during the large-scale tests made the test results difficult to interpret for use in field applications. The exhaust system was used to reduce the environmental impact of the tests, but it also altered the natural buoyancy-driven flow of the smoke and heat through the vents and draft curtains. This created a pressure difference between the inside and outside of the test building, which affected the performance of the sprinklers, vents, and draft curtains. Therefore, the test results may not accurately reflect the conditions that would occur in real buildings without an exhaust system.

NEW QUESTION # 110

The maximum distance between hangers for an automatic fire sprinkler system for a threaded lightwall steel pipe of 2 in. diameter is

- A. 15 ft.
- **B. 10 ft.**
- C. 12 ft.
- D. 8 ft.

Answer: B

Explanation:

Explanation

According to NFPA 13, Table 17.4.2.1 (a), the maximum distance between hangers for an automatic fire sprinkler system for a threaded lightwall steel pipe of 2 in. diameter is 10 ft. This is done to ensure that there are not long stretches of unsecured piping that could sag, leak, or break. The distance between hangers may vary depending on the type of pipe, the type of hanger, and the seismic design category of the building.
