

Pass Guaranteed 2025 Nutanix NCP-US-6.5: Latest Valid Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Exam Review

What's more, part of that Dupleader NCP-US-6.5 dumps now are free: <https://drive.google.com/open?id=1IvWNS7utV6jaTOA0jhtQM0KhXiXqPS7C>

With the development of information and communications technology, we are now living in a globalized world. NCP-US-6.5 information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. When it comes to the study materials selling in the market, qualities are patchy. But our NCP-US-6.5 test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our NCP-US-6.5 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

The price for NCP-US-6.5 study materials is quite reasonable, and no matter you are a student or you are an employee, you can afford the expense. Besides, NCP-US-6.5 exam materials are compiled by skilled professionals, therefore quality can be guaranteed. NCP-US-6.5 Study Materials cover most knowledge points for the exam, and you can learn lots of professional knowledge in the process of training. We provide you with free update for 365 days after purchasing NCP-US-6.5 exam dumps from us.

>>> Valid NCP-US-6.5 Exam Review <<<

NCP-US-6.5 Latest Test Simulator & Well NCP-US-6.5 Prep

Perhaps you still cannot believe in our Nutanix NCP-US-6.5 study materials. You can browser our websites to see other customers real comments. Almost all customers highly praise our Nutanix NCP-US-6.5 Exam simulation. In short, the guidance of our NCP-US-6.5 practice questions will amaze you. Put down all your worries and come to purchase our NCP-US-6.5 learning quiz!

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q37-Q42):

NEW QUESTION # 37

What are two ways to manage Objects? (Choose two.)

- A. SSH
- B. API
- C. PC

- D. CLI

Answer: B,C

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on.

References: Nutanix Objects User Guide; Nutanix Objects API Reference Guide

NEW QUESTION # 38

Which confirmation is required for an Objects deployment?

- A. Configure a dedicated storage container on Prism Element or Prism Cent
- B. Configure VPC on both Prism Element and Prism Central.
- C. Configure NTP servers on both Prism Element and Prism Central.
- D. Configure Domain Controllers on both Prism Element and Prism Central.

Answer: C

Explanation:

The configuration that is required for an Objects deployment is to configure NTP servers on both Prism Element and Prism Central. NTP (Network Time Protocol) is a protocol that synchronizes the clocks of devices on a network with a reliable time source. NTP servers are devices that provide accurate time information to other devices on a network. Configuring NTP servers on both Prism Element and Prism Central is required for an Objects deployment, because it ensures that the time settings are consistent and accurate across the Nutanix cluster and the Objects cluster, which can prevent any synchronization issues or errors. References: Nutanix Objects User Guide, page 9; Nutanix Objects Deployment Guide

NEW QUESTION # 39

An administrator successfully installed Objects and was able to create a bucket. When using the reference URL to access this Objects store, the administrator is unable to write data in the bucket when using an Active Directory account. Which action should the administrator take to resolve this issue?

- A. Verify Access Keys for the user.
- B. Reset the Active Directory user password.
- C. Replace SSL Certificates at the Objects store level.
- D. Verify sharing policies at the bucket level.

Answer: D

Explanation:

Nutanix Objects, part of Nutanix Unified Storage (NUS), provides S3-compatible object storage. After installing Objects and creating a bucket, the administrator is accessing the bucket via its reference URL (e.g., the S3 endpoint) using an Active Directory (AD) account but cannot write data. This indicates a permissions or configuration issue related to the AD account's access to the bucket.

Analysis of Options:

* Option A (Replace SSL Certificates at the Objects store level): Incorrect. SSL certificates are used for secure communication with the Objects store (e.g., HTTPS access via the reference URL). While an invalid or untrusted certificate might cause connection issues, the administrator can access the bucket (as they are attempting to write), so the issue is not with SSL certificates-it's with write permissions for the AD account.

* Option B (Verify Access Keys for the user): Incorrect. Access Keys (e.g., AWS-style access key and secret key) are used for programmatic access to Nutanix Objects via S3 APIs. However, the question specifies that the administrator is using an AD account, which suggests authentication via AD integration (e.g., SSO or LDAP). In this case, Access Keys are not relevant-permissions are managed through AD user accounts and bucket policies, not S3 Access Keys.

* Option C (Verify sharing policies at the bucket level): Correct. Nutanix Objects supports AD integration for user authentication, allowing AD accounts to access buckets. However, bucket access (e.g., read, write) is controlled by sharing policies (or bucket policies) defined at the bucket level. If the AD account cannot write data, the sharing policy likely does not grant write permissions to the user or their AD group. The administrator should verify and update

the bucket's sharing policies in Prism Central to ensure the AD account has write access.

* Option D (Reset the Active Directory user password): Incorrect. Resetting the AD user password might resolve authentication issues (e.g., if the password was incorrect), but the question implies the administrator can authenticate and access the bucket (since they are attempting to write). The issue is with write permissions, not authentication, so resetting the password will not resolve the problem.

Why Option C?

When using an AD account to access a Nutanix Objects bucket, permissions are managed through bucket-level sharing policies.

The inability to write data indicates that the AD account (or its associated group) lacks write permissions in the bucket's policy.

Verifying and updating the sharing policies in Prism Central to grant write access to the AD account resolves the issue, ensuring the user can write data to the bucket.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Nutanix Objects supports Active Directory integration for user authentication. Bucket access for AD accounts is controlled by sharing policies at the bucket level. If an AD user cannot write data to a bucket, verify the sharing policies in Prism Central to ensure the user or their AD group has write permissions."

NEW QUESTION # 40

Which two statements are true about HA for a file server? (Choose two.)

- A. Multiple FSVMs can share a single host.
- **B. Files reassigns the IP address of the FSVM to another FSVM.**
- **C. Affinity rules affect HA.**
- D. Shares availability are not impacted for several minutes.

Answer: B,C

Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), uses File Server Virtual Machines (FSVMs) to manage file services. High Availability (HA) in Nutanix Files ensures that shares remain accessible even if an FSVM or host fails. HA mechanisms include IP reassignment, FSVM distribution, and integration with hypervisor HA features.

Analysis of Options:

* Option A (Files reassigns the IP address of the FSVM to another FSVM): Correct. In a Nutanix Files HA scenario, if an FSVM fails (e.g., due to a host failure), the IP address of the failed FSVM is reassigned to another FSVM in the file server. This ensures that clients can continue accessing shares without disruption, as the share's endpoint (IP address) remains the same, even though the backend FSVM handling the request has changed.

* Option B (Shares availability are not impacted for several minutes): Incorrect. While Nutanix Files HA minimizes downtime, there is typically a brief disruption (seconds to a minute) during an FSVM failure as the IP address is reassigned and the new FSVM takes over. The statement "not impacted for several minutes" implies a longer acceptable downtime, which is not accurate—HA aims to restore availability quickly, typically within a minute.

* Option C (Multiple FSVMs can share a single host): Incorrect. Nutanix Files HA requires that FSVMs are distributed across different hosts to ensure fault tolerance. By default, one FSVM runs per host, and Nutanix uses anti-affinity rules to prevent multiple FSVMs from residing on the same host.

This ensures that a single host failure does not impact multiple FSVMs, which would defeat the purpose of HA.

* Option D (Affinity rules affect HA): Correct. Nutanix Files leverages hypervisor HA features (e.g., AHV HA) and uses affinity/anti-affinity rules to manage FSVM placement. Anti-affinity rules ensure that FSVMs are placed on different hosts, which is critical for HA—if multiple FSVMs were on the same host, a host failure would impact multiple FSVMs, reducing availability. These rules directly affect how HA functions in a Files deployment.

Selected Statements:

* A: IP reassignment is a core HA mechanism in Nutanix Files to maintain share accessibility during FSVM failures.

* D: Affinity (specifically anti-affinity) rules ensure FSVM distribution across hosts, which is essential for effective HA.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"High Availability (HA) in Nutanix Files ensures continuous share access during failures. If an FSVM fails, its IP address is reassigned to another FSVM in the file server to maintain client connectivity. Nutanix Files uses anti-affinity rules to distribute FSVMs across different hosts, ensuring that a single host failure does not impact multiple FSVMs, which is critical for HA."

:

Nutanix Files Administration Guide, Version 4.0, Section: "High Availability in Nutanix Files" (Nutanix Portal).

NEW QUESTION # 41

An administrator successfully installed Objects and was able to create a bucket.

When using the reference URL to access this Objects store, the administrator is unable to write data in the bucket when using an Action Directory account.

Which action should the administrator take to resolve this issue?

- A. Reset the Active Directory user password.
- B. Verify sharing policies at the bucket level.
- C. Replace SSL Certificates at the Object store level.
- D. Verify Access Keys for the user.

Answer: D

Explanation:

The action that the administrator should take to resolve this issue is to verify Access Keys for the user. Access Keys are credentials that allow users to access Objects buckets using S3-compatible APIs or tools. Access Keys consist of an Access Key ID and a Secret Access Key, which are used to authenticate and authorize requests to Objects. If the user is unable to write data in the bucket using an Active Directory account, it may be because the user does not have valid Access Keys or the Access Keys do not have sufficient permissions. The administrator can verify and manage Access Keys for the user in Prism Central. Reference: Nutanix Objects User Guide, page 13; Nutanix Objects Solution Guide, page 8

NEW QUESTION # 42

.....

We offer you NCP-US-6.5 questions and answers for you to practice, the NCP-US-6.5 exam dumps are of high quality. The soft test exam will offer you real test environment for you, so you can know the detailed information of the exam, it will help you have a deeper understanding of the exam. Your confidence will also be set up through the practicing of NCP-US-6.5 Questions and answers, a good mental state will help you to exert the ability you should have.

NCP-US-6.5 Latest Test Simulator: https://www.dumpleader.com/NCP-US-6.5_exam.html

To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our NCP-US-6.5 exam dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes, Nutanix Valid NCP-US-6.5 Exam Review Human-Friendly Interface, Nutanix Valid NCP-US-6.5 Exam Review Because you can get the downloading link within ten minutes after purchasing, so that you can begin your study right now.

You declare this type of an array by indicating NCP-US-6.5 Latest Test Simulator the number of elements in the array either on the declaration of the variable or before the array's first use, Through NCP-US-6.5 such care and attention, product and package design can take on iconic power... □.

Rely on Real Nutanix NCP-US-6.5 Questions For Success

To fill the void, we simplify the procedures Well NCP-US-6.5 Prep of getting way, just place your order and no need to wait for arrival of our NCP-US-6.5 Exam Dumps or make reservation in NCP-US-6.5 Latest Test Simulator case people get them all, our practice materials can be obtained with five minutes.

Human-Friendly Interface, Because you can get the downloading Valid NCP-US-6.5 Exam Review link within ten minutes after purchasing, so that you can begin your study right now, After you bought the practice materials for the NCP-US-6.5 exam, if you have any question in the process of using, you can ask the service staff for help by email.

It is a generally accepted fact that the NCP-US-6.5 exam has attracted more and more attention and become widely acceptable in the past years.
