

# Pass Guaranteed 2025 Palo Alto Networks High Hit-Rate NetSec-Pro Real Question

Palo Alto Networks PCSAE Palo Alto Networks Certified Security Automation Engineer 1

**Pass Guaranteed Quiz 2023 Palo Alto Networks PCSAE: Palo Alto Networks Certified Security Automation Engineer High Hit-Rate Latest Exam Format**

Once bit twice shy! Many candidates feel depressed since they failed before, and someone choose to delay exams, someone may choose to give up. Cheer up! Our latest Palo Alto Networks PCSAE exam review questions will be your best savior and help you out of failure experience. Yes. We are the best authorized legal company which offers [Valid PCSAE Exam Review](#) questions many years, we are entitled as the best high passing rate provider now.

The PCSAE certification program is highly valued in the cybersecurity industry, as it demonstrates the candidate's expertise in security automation. The program is recognized by leading organizations, including the National Institute of Standards and Technology (NIST) and the International Organization for Standardization (ISO). Palo Alto Networks Certified Security Automation Engineer certification program is also recognized by many employers, who value candidates with the skills and knowledge needed to automate their security operations. Overall, the PCSAE certification program is an excellent way for security professionals to advance their careers in the cybersecurity industry.

The Palo Alto Networks PCSAE exam is conducted by Palo Alto Networks, a leading provider of security solutions. Palo Alto Networks has a reputation for providing top-quality security solutions that are used by organizations around the world. The PCSAE certification is a testament to the company's commitment to providing high-quality security solutions and to the importance of security automation in today's fast-paced digital world.

Time is the sole criterion for testing truth, similarly, passing rates are the only standard to test whether our NetSec-Pro study materials are useful. Our pass rate of our NetSec-Pro training prep is up to 98% to 100%, anyone who has used our NetSec-Pro Exam Practice has passed the exam successfully. And we have been treated as the most popular vendor in this career and recognised as the first-class brand to the candidates all over the world.

## Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>• GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.</li></ul> |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 2 | <ul style="list-style-type: none"> <li>Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.</li> </ul> |
| Topic 3 | <ul style="list-style-type: none"> <li>Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.</li> </ul>                                                                                                                               |

## 100% Pass Quiz 2025 Palo Alto Networks NetSec-Pro: Palo Alto Networks Network Security Professional – High Pass-Rate Real Question

You can learn NetSec-Pro quiz torrent skills and theory at your own pace, and you are not necessary to waste your time on some useless books or materials and you will save more time and energy that you can complete other thing. We also provide every candidate who wants to get certification with free Demo to check our materials. No other NetSec-Pro Study Materials or study dumps can bring you the knowledge and preparation that you will get from the NetSec-Pro study materials available only from 2Pass4sure.

### Palo Alto Networks Network Security Professional Sample Questions (Q47-Q52):

#### NEW QUESTION # 47

In which two applications can Prisma Access threat logs for mobile user traffic be reviewed? (Choose two.)

- A. Strata Logging Service
- B. Strata Cloud Manager (SCM)
- C. Prisma Cloud dashboard
- D. Service connection firewall

**Answer: A,B**

Explanation:

Threat logs for Prisma Access mobile users can be reviewed in both Strata Cloud Manager (SCM) and Strata Logging Service. Prisma Cloud and service connection firewalls are not directly tied to mobile user traffic logs.

"Prisma Access logs are available in the Strata Cloud Manager and can also be sent to the Strata Logging Service for detailed analysis and threat visibility." (Source: Prisma Access Administration Guide)

#### NEW QUESTION # 48

What must be configured to successfully onboard a Prisma Access remote network using Strata Cloud Manager (SCM)?

- A. Cloud Identity Engine
- B. GlobalProtect agent
- C. Autonomous Digital Experience Manager (ADEM)
- D. IPSec termination node

**Answer: D**

Explanation:

To connect a remote network to Prisma Access via Strata Cloud Manager (SCM), the remote network requires an IPSec termination node. This acts as the VPN endpoint, ensuring secure connectivity between branch locations and Prisma Access.

"To onboard a remote network, configure the IPSec termination node on the customer's premises. This VPN endpoint establishes the secure tunnel to Prisma Access for traffic backhauling." (Source: Onboard Remote Networks) Key takeaway:

The IPSec termination node is fundamental for secure, encrypted connectivity.

#### NEW QUESTION # 49

Which component of NGFW is supported in active/passive design but not in active/active design?

- A. Single floating IP address
- B. Configuring ARP load-sharing on Layer 3
- C. Route-based redundancy
- D. Using a DHCP client

**Answer: A**

Explanation:

Single floating IP address (also known as a floating IP or shared IP) is supported only in an active/passive HA pair. In active/active HA, both firewalls are forwarding traffic simultaneously and thus do not share a single floating IP.

"In active/passive HA, a single floating IP address is used for seamless failover. Active/active HA requires separate IP addresses and does not support a single floating IP." (Source: Active/Passive vs. Active/Active HA) This simplifies failover in active/passive deployments by using a single shared IP that moves to the active peer upon failover.

#### NEW QUESTION # 50

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- B. Install a device certificate.
- C. Deploy a service connection for each branch site and connect with SCM.
- D. Configure NTP and DNS servers for the firewall.

**Answer: B,D**

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity: Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

"To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com." (Source: SCM Onboarding Requirements) Install a device certificate A device certificate authenticates the firewall's identity when connecting to SCM.

"The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity." (Source: Device Certificates) These steps ensure trust, secure communication, and successful onboarding into SCM.

#### NEW QUESTION # 51

During a security incident investigation, which Security profile will have logs of attempted confidential data exfiltration?

- A. Vulnerability Protection Profile
- B. WildFire Analysis Profile
- C. Enterprise DLP Profile
- D. File Blocking Profile

**Answer: C**

Explanation:

Enterprise DLP Profile is specifically designed to detect and log data exfiltration attempts, including those involving confidential or

sensitive data.

"Enterprise DLP logs capture incidents involving potential data exfiltration. They help identify sensitive data transfers, even in seemingly legitimate traffic." (Source: Enterprise DLP Logging and Alerts) File Blocking and Vulnerability Protection handle files or exploit detection, while WildFire focuses on malware analysis-not direct data exfiltration.

## NEW QUESTION # 52

.....

If you are the first time to buy the NetSec-Pro learning material online, or you have bought them for many times, there may be some problem that puzzle you, if you have any questions about the NetSec-Pro exam dumps, you can ask our service stuff for help. They have the professional knowledge of NetSec-Pro Training Materials, and they will be very helpful for solving your problem. In addition, we have free demo for you to try before buying the product, and you can have a try before purchasing.
