Plat-Admn-301 Valid Exam Pattern, Training Plat-Admn-301 For Exam

There are many advantages of our Plat-Admn-301 pdf torrent: latest real questions, accurate answers, instantly download and high passing rate. You can totally trust our Plat-Admn-301 practice test because all questions are created based on the requirements of the certification center. Latest Plat-Admn-301 Test Questions are verified and tested several times by our colleagues to ensure the high pass rate of our Plat-Admn-301 study guide.

Salesforce Certified Platform Administrator II Sample Questions (Q97-Q102):

NEW QUESTION # 97

The administrator at Cloud Kicks built a flow in a sandbox. After testing and validating the flow, the administrator plans to promote the flow to the production environment with a change set.

Which three considerations should the administrator be aware of when moving flows with a change set?

Choose 3 answers

- A. All flow dependencies are automatically added to the change set.
- B. Flows deployed are inactive and need to be manually activated.
- C. Flows are automatically activated upon deployment.
- D. Deploying or redeploying a flow with change sets creates a version of the flow in the destination org.
- E. Flow allows only one version of the flow when deployed with a change set.

Answer: A,B,D

Explanation:

Flows deployed with change sets are inactive by default and need to be manually activated in the destination org before they can run. Deploying or redeploying a flow with change sets creates a new version of the flow in the destination org, which preserves the previous versions and allows for rollback if needed. All flow dependencies, such as custom fields, objects, or variables, are automatically added to the change set when a flow is added.

NEW QUESTION # 98

The sales agents at DreamHouse Realty have a profile that allows them to import records for a custom object called House. The agents only need to make imports occasionally and typically import around 100 new records at a time. What tool should the agents use to upload records?

- A. Bulk API
- B. Data Import Wizard
- C. Apex
- D. Data Loader

Answer: B

Explanation:

Data Import Wizard is a tool that allows administrators to import data for standard and custom objects in Salesforce using CSV files. Data Import Wizard can handle up to 50,000 records at a time and supports simple data transformations and validations. Data Import Wizard can be used to upload records for a custom object when the number of records is small and the import frequency is low.

NEW QUESTION # 99

Cloud Kicks has organization-wide sharing defaults on the opportunity set to private. However, members of the finance team need to see closed won opportunities. The finance team members all have roles under the finance director, while the sales team members have roles under the sales manager.

Which two options should the administrator use to meet these criteria?

Choose 2 answers

- A. Make an owner-based sharing rule where the won field = true.
- B. Share with roles and subordinates of the finance director role.
- C. Select all opportunities owned by the sales manager role.
- D. Create a criteria-based sharing rule where the won field = true.

Answer: B,D

Explanation:

Two options that the administrator should use to meet these criteria are:

* Share with roles and subordinates of the finance director role. This option allows you to grant access to records based on the role hierarchy of your org. You can share records with users who are in a specific role or in roles below that role in the hierarchy. In this case, you can share records with roles and subordinates of the finance director role, which includes all the members of the finance team.

* Create a criteria-based sharing rule where the won field = true. This option allows you to grant access to records based on certain field values or formulas. You can create a criteria-based sharing rule on opportunities that grants access to records where the won field is true, which means that the opportunity stage is closed won.

The other two options are incorrect because:

* Make an owner-based sharing rule where the won field = true is not an option because owner-based sharing rules do not allow

you to specify field values or formulas as criteria. Owner-based sharing rules only allow you to share records based on who owns them or what role or group they belong to.

* Select all opportunities owned by the sales manager role is not an option because it does not meet the criteria of sharing all closed won opportunities. It only shares opportunities that are owned by users who are in the sales manager role, regardless of their stage.

NEW QUESTION # 100

An administrator at Cloud Kicks recently built a screen flow in a sandbox that creates a case and follow-up task. When the flow runs in the sandbox, it works just as expected. When tested in production, the flow errors when creating the records.

Choose 2 answers

- **A. Open the flow In Debug mode and Run the Flow as another user.**
- B. Change the Default Case Creator to the user's manager.
- **C. Log in as another user and run the flow.**
- D. Change the user experiencing the issue to the System Administrator profile.

Answer: A,C

Explanation:

Opening the flow in Debug mode and running it as another user allows simulating how the flow behaves for different users with different permissions and settings. This can help identify any issues related to user

NEW QUESTION # 101

As part of their yearly audit, the compliance team at Cloud Kicks would like to track when a user's profile has been changed and who changed the data.

What should the administrator review to meet this requirement?

- A. Historical Trending
- **B. Setup Audit Trail**
- C. Analytic Snapshot
- D. Field History Tracking

Answer: B

Explanation:

The Setup Audit Trail is a tool that allows you to view and download a log of changes made in your org's Setup area. The log shows up to 20 fields of information for each change, such as who made it, when it was made, what type of change it was, and what values were changed. You can use the Setup Audit Trail to track configuration changes directly in production and identify any unauthorized or problematic changes. One of the changes that the Setup Audit Trail tracks is when a user's profile is changed and who changed it. This means that you can use the Setup Audit Trail to see when a user's profile has been changed and who changed the data.
