Topic 7	• Training and Team Coaching • Launching More ARTs and Value Streams
Topic 8	• Thriving in the Digital Age • Core Competencies for Business Agility

Scaled Agile SAFe Practice Consultant SPC (6.0) Sample Questions (Q32-Q37):

NEW QUESTION # 32

What activity occurs during the program Inspect and Adapt workshop?

- A. Biweekly System Demo
- B. Team Iteration Demo
- C. Iteration Metrics update
- D. Roadmap update
- E. PI Predictability Measure update.

Answer: E

Explanation:

The Inspect and Adapt (I&A) workshop is a regular, program-level event at the end of each Program Increment (PI). One of the key activities in this workshop is updating the PI Predictability Measure, which assesses how well teams and the ART delivered on their PI Objectives. This measure is reviewed and discussed to help the ART improve planning and delivery in future PIs.

While the I&A event also includes a PI System Demo and a Retrospective/Problem-Solving Workshop, the Team Iteration Demo (C) and Iteration Metrics update (E) are typically performed at the team level throughout the PI, not specifically during the I&A. Roadmap updates (B) and Biweekly System Demos (D) are other ongoing events outside the I&A workshop.

SAFe 6.0 Website: Inspect and Adapt

SPC 6.0 Guide: "Teams collectively assess PI Predictability and use these insights for improvement."

NEW QUESTION # 33

(Select 2) What steps in the Portfolio Kanban are most appropriate for running research spikes?

- A. Funnel-understand whether the Epic makes sense.
- B. Analysis-spikes help clarify feasibility.
- C. Portfolio Backlog-run a spike before pulling into development.
- D. Implementing-teams perform spikes as usual

Answer: A,B

Explanation:

A: During the Analysis step, research spikes (time-boxed investigations) are used to clarify feasibility, identify unknowns, and gather data for decision making.

C: In the Funnel step, early research or spikes help determine if the Epic is even worth advancing, especially for innovations or high-risk items.

Portfolio Backlog (D) is for items already accepted for future implementation; it's generally too late for basic research spikes.

Implementing (B) is for execution, not discovery.

SAFe 6.0 Website: Portfolio Kanban

SPC 6.0 Guide: "Spikes are often run during the Funnel and Analysis steps to clarify scope, feasibility, and business case."

NEW QUESTION # 34

Enablers can build or enhance development infrastructure.

- **A. True**
- B. False

Answer: A

NEW QUESTION # 35

Backlogs in SAFe behave just like queues.

- **A. False**
- B. True

Answer: A

Explanation:

SAFe differentiates backlogs from traditional queues. Backlogs are ordered lists of work items and are actively managed and prioritized by Product Owners or Product Management. They are not unmanaged queues where work simply accumulates.

Backlogs support flow by ensuring the most valuable items are always ready for selection.

"Backlogs are not queues. They are actively managed, prioritized, and refined so that they contain ready work for teams to select. In contrast, queues are unmanaged holding areas that create delays and waste." (Source: SAFe 6.0 Framework: Backlog; SPC 6.0 Guide "Building Solutions with Agile Product Delivery")

NEW QUESTION # 36

A change agent is invited to help an ART where management requires the teams to make big, up-front, and detailed scope commitments for every release. These commitments are not mandated by the external environment. What can the change agent do to best coach the decision makers?

- A. Explain the need to satisfy the commitments immediately and improve later
- B. Explain the benefits of releasing at the end of the PI
- **C. Explain the value of assuming variability; preserving options**
- D. Explain that too much up-front detail demotivates Product Owners

Answer: C

Explanation:

SAFe Principle #3, "Assume variability; preserve options," addresses this scenario directly. The change agent should coach decision makers on the value of maintaining flexibility in scope and design, rather than committing up-front to detailed plans. This principle helps reduce risk and ensures better outcomes as new information emerges.
