### SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q24-Q29):

#### **NEW OUESTION #24**

What features are supported by data analyzer? Note: There are 3 correct answers to this question.

- A. Conditional formatting
- B. Charts
- C. Calculated measures
- D. Linked dimensions
- E. Input controls

Answer: A,B,C

### NEW QUESTION # 25

You are entering values for several expense accounts in a data table. Which data entry mode must you use to process the data with a delay defined in System Administration?

- A. Fluid
- B. Single
- C. Mass

#### Answer: A

#### **NEW QUESTION #26**

You have a story based on an import model. The transaction data in the model's data source changes. How can you update the data in the model? Note: There are 2 correct answers to this question.

- A. Schedule the import
- B. Allow model import
- C. Refresh the story
- D. Refresh the import job

#### Answer: A,C

#### Explanation:

To update the data in a model based on an import connection, two main approaches can be used:

Refresh the story: This action forces SAP Analytics Cloud to reload the data for the visualizations in a story, pulling in the most recent data available in the model. This is a manual process initiated by the user.

Schedule the import: This option allows users to set up a recurring data import schedule, ensuring the model is regularly updated with the latest data from the source system. This automated process helps maintain data freshness without manual intervention.

Both methods ensure that the story reflects the most current data, accommodating changes in the transaction data of the model's data source.

#### **NEW QUESTION #27**

You are creating a styling rule for a table. What is the context?

- A. The location of the cursor
- B. The table header
- C. The most granular level in the table
- D. The highest level in the table

#### Answer: A

#### **NEW QUESTION #28**

Which tasks can you perform in data analyzer? Note: There are 2 correct answers to this question.

- A. Input data
- B. Create cross-calculation
- C. Drill down on data
- D. Filter data

#### Answer: C,D

#### Explanation:

In Data Analyzer, users can perform various tasks to analyze their data, including filtering data and drilling down on data. Filtering allows users to narrow down the dataset to focus on specific subsets of data, enhancing the analysis's relevancy. Drilling down provides the ability to explore data at a more granular level, revealing deeper insights into the data points and trends within the larger dataset.
