Don't miss this opportunity of buying an updated and affordable SAP Certified Associate - Security Administrator (C-SEC-2405) exam product.

SAP C-SEC-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 2	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
Topic 3	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 4	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.

Facing all kinds of the C-SEC-2405 learning materials in the market, it's difficult for the candidates to choose the best one. Our C-SEC-2405 learning materials are famous for the high accuracy and high quality. Besides, we provide free update for one year, and pass guarantee and money back guarantee. We have the free demo for you to know more about our C-SEC-2405 Learning Materials. If you have any questions, you can contact our online service staff.

SAP Certified Associate - Security Administrator Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Single Sign-On
- B. Authentication
- C. Policy refinement
- D. Central User Repository

Answer: A,B

Explanation:

* Context: Identity Authentication Service (IAS) supports secure user authentication and enables Single Sign-On (SSO) across systems.

* Solution Descriptions:

* Authentication: Verifies user credentials and identity.

* Single Sign-On (SSO): Allows seamless login across SAP and third-party systems without requiring multiple authentications.

SAP Security References:

* SAP Identity Authentication Service (IAS) Guide

* SAP SSO Configuration Documentation

NEW QUESTION # 73

In SAP S/4HANA Cloud Public Edition, which of the following can you change in a derived business role if the "Inherit Spaces in Derived Business Roles" checkbox is NOT selected in the leading business role?

- A. Business Role Template
- B. Pages
- C. Business Catalogs
- D. Restrictions

Answer: B

Explanation:

In SAP S/4HANA Cloud Public Edition, derived business roles inherit attributes from their leading business role, but the "Inherit Spaces in Derived Business Roles" checkbox controls whether Spaces are inherited. If this checkbox is not selected, administrators can modify the Pages assigned to the derived business role independently of the leading role. Pages in the SAP Fiori launchpad define the layout and content visible to users, such as tiles and applications, and allowing changes in the derived role provides flexibility to tailor the user interface for specific business needs. The Business Role Template, Restrictions, and Business Catalogs, however, remain inherited and cannot be modified in the derived role, as these are core components defined in the leading role to ensure consistency across related roles. This selective modification of Pages enables organizations to customize user experiences while maintaining standardized authorizations, supporting both operational efficiency and security compliance in SAP S/4HANA Cloud Public Edition's role management framework.

NEW QUESTION # 74

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Analyze authorization check results for already assigned authorizations
- B. Display business roles granting specific access
- C. Adjust role restrictions to account for missing authorizations
- D. Analyze authorization check results for missing authorizations
- E. Adjust role restrictions to further limit access when performing forensic analysis

Answer: A,B,D

Explanation:

The Display Authorization Trace in SAP S/4HANA Cloud Public Edition is a powerful tool for analyzing authorization issues. It allows administrators to analyze authorization check results for missing authorizations, identifying gaps where users lack necessary permissions to perform tasks, which is critical for troubleshooting access issues. Additionally, it can display business roles granting specific access, providing visibility into which roles provide permissions for particular applications or data, aiding in role management and compliance checks. The tool also supports analyzing authorization check results for already assigned authorizations, helping administrators verify whether existing permissions are functioning as intended.

However, adjusting role restrictions, either to address missing authorizations or for forensic analysis, is not a function of the Display Authorization Trace, as it is a diagnostic tool, not a maintenance interface. These capabilities make the Display Authorization Trace essential for ensuring secure and efficient access control, supporting both operational and audit requirements in SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 75

Which cloud-based SAP solution helps organizations control their data across various cloud platforms and on- premise data sources?

- A. SAP Privacy Governance
- B. SAP Information Steward
- C. SAP Identity Access Governance
- D. SAP Data Custodian

Answer: D

Explanation:

SAP Data Custodian is the cloud-based SAP solution designed to help organizations control their data across various cloud platforms and on-premise data sources. It provides a centralized framework for data governance, enabling organizations to monitor, manage, and secure data throughout its lifecycle, regardless of where it resides. SAP Data Custodian ensures compliance with data protection regulations by offering tools for data discovery, classification, and access control, making it ideal for hybrid environments. In contrast, SAP Identity Access Governance focuses on managing user access and permissions, SAP Information Steward is used for data quality and profiling, and SAP Privacy Governance addresses privacy compliance.

SAP Data Custodian's unique capability to unify data control across diverse platforms makes it the correct choice for comprehensive data management and security.

NEW QUESTION # 76

Following an upgrade of your SAP S/4HANA on-premise system to a higher release, you perform a Modification Comparison using SU25.

What does this comparison do?

- A. It compares the Role Maintenance data from the current release with the data for the previous release and allows you to adjust any custom default values in tables USOBX and USOBT.
- B. It compares your changes to the SAP defaults in USOBX_C and USOBT_C with the new SAP defaults in the current release and allows you to make adjustments.
- C. It compares the Role Maintenance data from the previous release with the data for the current release and writes any new default values in tables USOBX_C and USOBT_C.
- D. It compares your changes to the SAP defaults in USOBX and USOBT with the new SAP defaults in the current release and allows you to make adjustments.

Answer: D

Explanation:

* Context: The SU25 transaction is used after an SAP system upgrade to align role and authorization configurations with new release defaults.

* Solution Description:

* SU25 compares existing changes in tables USOBX and USOBT (default authorization checks and field values) against the new defaults in the upgraded release. This allows administrators to adjust roles and authorization settings accordingly.

SAP Security References:

* SAP SU25 Post-Upgrade Guide

* SAP Authorization Management Documentation

NEW QUESTION # 77

.....

If you would like to use all kinds of electronic devices to prepare for the C-SEC-2405 exam, then I am glad to tell you that our online app version is definitely your perfect choice.
