CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q95-Q100):

NEW QUESTION # 95
What are the four main database domains?

- A. System, User, Host, Network
- B. Local, Global, User, VPN
- C. System. Global. Log. Event
- D. System, User, Global. Log

Answer: D

Explanation:
The four main database domains are System, User, Global, and Log. Each domain contains different types of data and serves different purposes123. The System domain contains the configuration data of the Security Management Server (SMS), such as the SMS name, IP address, licensing, and installed products. The User domain contains the configuration data of the security policy, such as the objects, rules, services, and VPN communities. The Global domain contains the configuration data of the global policy, such as the global objects, rules, and services. The Log domain contains the log data of the security events, such as the source, destination, action, and time of each event123. Reference:

NEW QUESTION # 97
SmartEvent utilizes the Log Server, Correlation Unit and SmartEvent Server to aggregate logs and identify security events. The three main processes that govern these SmartEvent components are:

- A. cpcu, cplog, cpse
- B. eventiasv, eventiarp,eventiacu
- C. fwd, secu, sesrv
- D. cpsemd, cpsead, and DBSync

Answer: B

Explanation:
SmartEvent is a unified security event management and analysis solution that collects and analyzes data from multiple sources to identify and respond to security threats. SmartEvent consists of three main components:

Log Server, Correlation Unit, and SmartEvent Server1. The three main processes that govern these SmartEvent components are:
* eventiasv: This process is responsible for indexing the logs received from the Log Server and storing them in the SmartEvent database. It also performs log consolidation and compression to optimize the disk space usage2.
* eventiarp: This process is responsible for running the predefined and custom correlation rules on the indexed logs and generating security events based on the rule criteria. It also sends notifications and triggers automatic responses for the security events3.
* eventiacu: This process is responsible for providing the web-based user interface for SmartEvent, which allows the administrators to view, analyze, and manage the security events. It also provides the SmartEvent API for external integration4. References: Check Point Processes and Daemons5, SmartEvent Administration Guide1
