Many users report to us that they are very fond of writing their own notes while they are learning. This will enhance their memory and make it easier to review. Our Apigee-API-Engineer exam questions have created a PDF version of the Apigee-API-Engineer practice material to meet the needs of this group of users. You can print the PDF version of the Apigee-API-Engineer learning guide so that you can carry it with you. As long as you have time, you can take it out to read and write your own experience.

Google Apigee-API-Engineer is a certification exam that validates the skills of an individual in the field of API development using the Apigee platform. Google Cloud - Apigee Certified API Engineer certification is offered by Google Cloud and is aimed at professionals who want to showcase their expertise in designing, developing, and maintaining APIs using the Apigee platform. Google Cloud - Apigee Certified API Engineer certification exam tests the candidate's knowledge of various aspects of API development, such as API design, security, scalability, and performance optimization.

To prepare for the Google Apigee-API-Engineer Certification Exam, candidates can take advantage of various training resources provided by Google Cloud. These resources include online courses, practice exams, and hands-on labs to help candidates build and test their skills in Apigee. Upon passing the exam, candidates earn the Google Cloud - Apigee Certified API Engineer certification, which validates their expertise in designing, building, and managing API solutions using Apigee. Google Cloud - Apigee Certified API Engineer certification also serves as a demonstration of their proficiency in working with Google Cloud technologies and their commitment to staying up-to-date with the latest industry trends and best practices in API management.

Apigee-API-Engineer Valid Test Labs, Apigee-API-Engineer Exam Outline

Knowledge is defined as intangible asset that can offer valuable reward in future, so never give up on it and our Apigee-API-Engineer exam preparation can offer enough knowledge to cope with the exam effectively. To satisfy the needs of exam candidates, our experts wrote our Apigee-API-Engineer practice materials with perfect arrangement and scientific compilation of messages, so you do not need to study other Apigee-API-Engineer training questions to find the perfect one anymore.

The demand for skilled engineers who can manage and optimize APIs is on the rise, as more and more organizations are embracing digital transformation. To meet this demand, Google has introduced the Apigee-API-Engineer Certification Exam, which is specifically designed for engineers who work with the Apigee API platform.

Google Cloud - Apigee Certified API Engineer Sample Questions (Q112-Q117):

NEW QUESTION # 112
As an Apigee API Engineer you are building a new proxy as follows:
POST /v1/virtualnetworkconnections
The backend developer, being new to RESTful APIs, asks you which response code should be returned on a successful call. What should you recommend?

- A. Return a 200 OK
- B. Return a 303 See Other
- C. Return a 302 Found
- D. Return a 202 Accepted
- E. Return a 400 Bad Request
- F. Return a 201 Created

Answer: F

NEW QUESTION # 113
Your API generates tokens to authenticate users. You have the following requirements
1. Limited token lifetime.
2. Managed key rotation.
3. Self-verifiable content.
4 Compact data representation
5. Refresh without new challenge.
You plan to use SAML2 Which two of the above-listed requirements are satisfied by using SAML2? Choose 2 answers

- A. Self-verifiable content
- B. Refresh without a new challenge
- C. Limited token lifetime.
- D. Managed key rotation
- E. Compact data representation

Answer: B,C

NEW QUESTION # 114
Your APIs are configured as a relying party on an OpenID Connect platform. You need to inspect and verify the OpenID Connect identity. What two actions should you take?
Choose 2 answers

- A. Use the OpenID Connect URL to locate a trusted 3rd party for verification the signature, exp, nbf and iat properties
- B. Parse the JWT to extract the exp: nbf and iat properties to determine if the token is still valid
- C. Using the JKWS URL in the OpenID Connect configuration, fetch the signing key to verify the JWT signature and parameters

- D. Verify the signature of the JWT using a shared secret.
- E. Pass the JWT to a preconfigured 3rd party for verification of the signature, exp, nbf and iat properties

Answer: B,C

NEW QUESTION # 115
In Apigee Edge APIs, what is fault.name?

- A. None of the above
- B. Custom variable that you populate before you Raise Fault
- C. An out-of-the-box variable populated by Edge when a policy fails
- D. Backend error names that are populated along with error code
- E. System errors that are only populated in script callouts

Answer: D

NEW QUESTION # 116
You have the following requirements for your API:
* Authenticate users.
* Identify applications.
* Log update events to StackDriver
* Enforce quotas based on Product configurations
* Alert when total API latency exceeds 500 milliseconds
Your Apigee Edge API proxy is currently implemented with the following Proxy Endpoint configuration Which above 2 requirements have been met with this configuration? Choose 2 answers

```
Verify A        Enforce                                    +
PI Key          Quota                                     Step

                          REQUEST

                          RESPONSE

    +
   Step

                                              Statistics
                                              Collect...

<ProxyEndpoint name="default">
    <Description/>
    <Flows>
        <Flow name="Chefs Collection Operations">
            <Description>Operate on the Chefs collection</Description>
            <Request>
                <Step>
                    <Name>Enforce-Quota</Name>
                </Step>
            </Request>
            <Response>
                <Step>
                    <Name>Statistics-Collector</Name>
                </Step>
            </Response>
            <Condition>(proxy.pathsuffix MatchesPath "/chefs/**")</Condition>
        </Flow>
    </Flows>
    <PostFlow name="PostFlow">
        <Request/>
        <Response/>
    </PostFlow>
    <PreFlow name="PreFlow">
        <Request/>
        <Response/>
    </PreFlow>
    <RouteRule name="Chefs Collection Operations">
        <Condition>(proxy.pathsuffix MatchesPath "/chefs/**")</Condition>
        <URL>https://allostrat.com/api/chefs/</URL>
    </RouteRule>
    <RouteRule name="noroute"/>
ProxyEndpoint>
```

- A. Authenticate users.
- B. Log update events to StackDriver
- C. Enforce quotas based on Product configurations
- D. Alert when total API latency exceeds 500 milliseconds
- E. Authenticate applications

Answer: A,C
