Choosing our Category-7A-General-and-Household-Pest-Control Exam Questions actually means that you will have more opportunities to be promoted in the near future. If you eventually fail the exam, we will refund the fee by the contract. We are confident that in the future, our Category-7A-General-and-Household-Pest-Control study tool will be more attractive and the pass rate will be further enhanced.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q30-Q35):

NEW QUESTION # 30

To get the most effective control of rats using poison baits, you need to:

- A. Reduce or eliminate food sources
- B. Place the baits out at dawn and remove them at night
- C. Place the baits out at night and remove them at dawn

Answer: A

Explanation:

Effective rat control with poison baits requires reducing or eliminating food sources to ensure rats are attracted to the bait rather than alternative food. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 8: Rodents) emphasizes this IPM approach, as rats will ignore baits if other food is available. Option A and Option B (placing/removing baits at specific times) are impractical and less effective, as rats are nocturnal but may feed at other times.

NEW QUESTION # 31

Signs of a Norway rat infestation include:

- A. Eggs laid in small batches in secluded places
- B. Dark, greasy smears and a musty odor
- C. Ceiling void nests lined with soft paper

Answer: B

Explanation:

Norway rats leave dark, greasy smears along walls from body oils and a musty odor from their urine, as they travel along established runways. The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 8: Rodents) lists these as key signs of infestation. Option A (eggs) is incorrect, as rats are mammals and do not lay eggs. Option C (ceiling void nests) is more typical of squirrels or birds, not Norway rats, which nest in burrows or lower areas.

NEW QUESTION # 32

The certified commercial pesticide applicator is ____ pesticide operator.

- A. Responsible for the minimum annual retraining required for a
- B. Jointly liable for all violations committed by any
- C. Responsible for the proper training of a
- D. All of the answers are applicable

Answer: D

Explanation:

Under NJDEP regulations (N.J.A.C. 7:30-6.2 and 7:30-5.2), a certified commercial pesticide applicator overseeing a pesticide operator has multiple responsibilities. Option A: The applicator is jointly liable for violations committed by the operator under their supervision, as they are responsible for ensuring compliance with all pesticide laws. Option B: The applicator must ensure the

operator receives proper training, which includes initial training on safe pesticide use, handling, and application techniques as outlined in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 1: Legal Responsibilities). Option C: Annual retraining is also required to maintain competency and stay updated on regulations, a requirement for operators under the supervision of a certified applicator (NJDEP guidelines). Since all these responsibilities apply, Option D is correct.

NEW QUESTION # 33

The best method of dealing with house flies is:

- A. The liberal application of insect repellent
- **B. Good sanitation practices**
- C. A perimeter band control area out to 10 feet

Answer: B

Explanation:

House flies are best controlled through good sanitation practices, such as removing garbage, cleaning spills, and sealing food sources, which eliminates breeding sites and attractants. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Flies) emphasizes sanitation as the primary control method. Option A (perimeter band control) may be used for other pests but is less effective for house flies indoors. Option C (insect repellent) is not a standard method for fly control in structures.

NEW QUESTION # 34

At multi-family residences, the applicator business shall provide a notice to each occupied unit how far in advance?

- A. 48 hours
- B. 24 hours
- **C. Prior to treatment**

Answer: C

Explanation:

NJDEP regulations (N.J.A.C. 7:30-9.13) require that multi-family residences receive notice prior to treatment, but the exact timeframe is not specified as 24 or 48 hours in the regulation. Best practice, as noted in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 2:

Notification Requirements), is to provide notice in advance, typically at least 24 hours, but the regulation itself uses the general term "prior." Option B (24 hours) and Option C (48 hours) are specific timeframes not mandated by the regulation.

NEW QUESTION # 35

.....

The pass rate is 98.95% for the Category-7A-General-and-Household-Pest-Control training materials, and most candidates can pass the exam just one time. We ensure you that you will refund your money if you fail to pass the exam.
