

Pass Guaranteed Amazon - SOA-C02 - AWS Certified SysOps Administrator - Associate (SOA-C02)–Efficient Exam Certification Cost

P.S. Free & New SOA-C02 dumps are available on Google Drive shared by PrepAwayTest: <https://drive.google.com/open?id=1SYhYApgrkeFXlJkHwSbj-bq43bVpQpEd>

These formats are SOA-C02 web-based practice test software, desktop practice exam software, and AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) PDF dumps files. All these three Amazon SOA-C02 exam questions formats are easy to use and compatible with all devices and the latest web browsers. Just choose the right AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) exam dumps format and start SOA-C02 exam questions preparation today.

The SOA-C02 exam is the updated version of the SOA-C01 exam, which was retired in July 2021. The new exam features updated content, including new services and features introduced by AWS. SOA-C02 exam is currently available in English, Japanese, Korean, and Simplified Chinese. SOA-C02 exam is conducted in a proctored environment and can be taken online or in-person at a testing center.

The AWS Certified SysOps Administrator - Associate (SOA-C02) exam is designed for system administrators who are responsible for managing and maintaining AWS services. AWS Certified SysOps Administrator - Associate (SOA-C02) certification exam validates the candidate's ability to deploy, manage, and operate scalable, highly available, and fault-tolerant systems on the AWS platform. It also tests the candidate's proficiency in monitoring and troubleshooting AWS applications and infrastructure, as well as their knowledge of security and compliance best practices.

The AWS Certified SysOps Administrator - Associate (SOA-C02) certification is a globally recognized credential that validates an individual's expertise in managing and deploying applications on the Amazon Web Services (AWS) platform. The SOA-C02 Exam

builds on foundational knowledge of AWS services and covers more advanced topics related to system operations, scalability, and security. AWS Certified SysOps Administrator - Associate (SOA-C02) certification is designed for IT professionals who have experience in managing and deploying applications on AWS and are looking to validate their skills and knowledge to potential employers.

Pdf SOA-C02 Exam Dump & SOA-C02 New Question

In order to provide the most effective SOA-C02 exam materials which cover all of the current events for our customers, a group of experts in our company always keep an close eye on the changes of the SOA-C02 exam, and then will compile all of the new key points as well as the latest types of exam questions into the new version of our SOA-C02 training engine. Do not lose the wonderful chance to advance with times. Just come and have a try on our SOA-C02 study questions!

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q130-Q135):

NEW QUESTION # 130

A company has an application that uses a scheduled AWS Lambda function to retrieve datasets from external sources over the internet. The function is not associated with a VPC. The company is modifying the application to store the information that the Lambda function retrieves on an Amazon RDS DB instance in a private subnet. The VPC has two public subnets and two private subnets.

A SysOps administrator must deploy a solution that allows the Lambda function to access the new database and continue to access the internet.

Which solution meets these requirements?

- A. Create a new Lambda function with VPC access and two public IP addresses. Attach the function to public subnets in the same Availability Zones that the database uses. Associate a security group with the function. Configure the security group inbound rules to allow Lambda to access the required resources.
- B. Reconfigure the Lambda function for VPC access. Attach the function to the private subnets. Add route table entries in the private subnets to route through the internet gateway to the internet. Associate a security group with the subnets. Configure the security group inbound rules to allow Lambda to access the required resources through the internet gateway.
- C. Create a new Lambda function with VPC access and an Elastic IP address. Attach the function to public subnets in two Availability Zones. Associate a security group with the Elastic IP address. Configure the security group outbound rules to allow Lambda to access the required resources.
- **D. Reconfigure the Lambda function for VPC access. Add NAT gateways to the public subnets in the VPC. Add route table entries in the private subnets to route through the NAT gateways to the internet. Attach the function to the private subnets that support the database. Associate a security group with the function. Configure the security group outbound rules to allow Lambda to access the internet.**

Answer: D

Explanation:

Since the Lambda function needs to access the Amazon RDS DB instance in a private subnet while still accessing the internet, it should be configured to run within the VPC.

NEW QUESTION # 131

The SysOps administrator needs to complete the KMS key policy for least privilege read access for the DataEngineer role to decrypt S3 objects encrypted with a KMS key.

Options:

- A. "kms:Update*", "kms:TagResource", "kms:Revoke*", "kms:Put*", "kms:List*", "kms:Get*", "kms:Enable*", "kms:Disable*", "kms:Describe*", "kms:Delete*", "kms:Create*", "kms:CancelKeyDeletion"
- B. "kms:ReEncrypt", "kms:GenerateDataKey*", "kms:Encrypt", "kms:DescribeKey"
- C. "kms:ListAliases", "kms:GetKeyPolicy", "kms:Describe*", "kms:Decrypt"
- **D. "kms:ListAliases", "kms:DescribeKey", "kms:Decrypt"**

Answer: D

Explanation:

To enable decryption of objects, the role only requires minimal permissions with least privilege:

kms

1: Necessary for reading and decrypting the data encrypted with KMS.

kms

2: Allows the role to check key properties, confirming it's the correct key for decryption.

kms

3: Useful if multiple keys are in use and validation against an alias is needed.

These permissions are sufficient for decryption without granting additional permissions like encryption or key management.

NEW QUESTION # 132

A company wants to use only IPv6 for all its Amazon EC2 instances. The EC2 instances must not be accessible from the internet, but the EC2 instances must be able to access the internet. The company creates a dual-stack VPC and IPv6-only subnets.

How should a SysOps administrator configure the VPC to meet these requirements?

- A. Create and attach an internet gateway.
Create a custom route table that includes an entry to point all IPv6 traffic to the internet gateway.
Attach the custom route table to the IPv6-only subnets.
- B. Create and attach a NAT gateway.
Create a custom route table that includes an entry to point all IPv6 traffic to the NAT gateway.
Attach the custom route table to the IPv6-only subnets.
- C. Create and attach an internet gateway and a NAT gateway.
Create a custom route table that includes an entry to point all IPv6 traffic to the internet gateway and all IPv4 traffic to the NAT gateway. Attach the custom route table to the IPv6-only subnets.
- **D. Create and attach an egress-only internet gateway.**
Create a custom route table that includes an entry to point all IPv6 traffic to the egress-only internet gateway.
Attach the custom route table to the IPv6-only subnets.

Answer: D

Explanation:

Only egress-only internet gateway can be used to let instance go to internet without being exposed.

NEW QUESTION # 133

A company has an existing web application that runs on two Amazon EC2 instances behind an Application Load Balancer (ALB) across two Availability Zones. The application uses an Amazon RDS Multi-AZ DB Instance. Amazon Route 53 record sets route requests for dynamic content to the load balancer and requests for static content to an Amazon S3 bucket. Site visitors are reporting extremely long loading times.

Which actions should be taken to improve the performance of the website? (Choose two.)

- **A. Add Amazon CloudFront caching for static content.**
- B. Change the load balancer listener from HTTPS to TCP.
- C. Move the static content from Amazon S3 to the web servers.
- **D. Implement Amazon EC2 Auto Scaling for the web servers.**
- E. Enable Amazon Route 53 latency-based routing.

Answer: A,D

Explanation:

Add Amazon CloudFront caching for static content.

Implement Amazon EC2 Auto Scaling for the web servers.

Not Enable Amazon Route 53 latency-based routing:

To use latency-based routing, you create latency records for your resources in multiple AWS Regions.

<https://docs.aws.amazon.com/Route53/latest/DeveloperGuide/routing-policy-latency.html>

NEW QUESTION # 134

A SysOps Administrator is using AWS KMS with AWS-generated key material to encrypt an Amazon EBS volume in a company's AWS environment. The Administrator wants to rotate the KMS keys using automatic key rotation, and needs to ensure that the EBS volume encrypted with the current key remains readable. What should be done to accomplish this?

- A. Create a new key in AWS KMS and assign the key to Amazon EBS.
- B. Back up the current KMS key and enable automatic key rotation.
- C. Upload ne key material to the EBS volume key in AWS KMS to enable automatic key rotation for the volume.
- D. Enable automatic key rotation of the EBS volume key in AWS KMS.

Answer: D

Explanation:

Explanation
