Efficient New Exam CAS-004 Materials - Pass CAS-004 Exam

Our CAS-004 exam materials are compiled by experts and approved by the professionals who are experienced. They are revised and updated according to the pass exam papers and the popular trend in the industry. The language of our CAS-004 exam torrent is simple to be understood and our CAS-004 test questions are suitable for any learners. The content of our CAS-004 Study Materials is easy to be mastered and has simplified the important information. Our CAS-004 test questions convey the latest and valid questions and answers and thus make the learning relaxing and efficient.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

A new web server must comply with new secure-by-design principles and PCI DSS. This includes mitigating the risk of an on-path attack. A security analyst is reviewing the following web server configuration:

```
TLS_AES_256_GCM_SHA384
TLS_CHACHA20_POLY1305_SHA256
TLS_AES_128_GCM_SHA256
TLS_AES_128_CCM_8_SHA256
TLS_RSA_WITH_AES_128_CBC_SHA256
TLS_DHE_DSS_WITH_RC4_128_SHA
RSA_WITH_AES_128_CCM
```

Which of the following ciphers should the security analyst remove to support the business requirements?

- A. TLS_AES_128_GCM_SHA256
- B. TLS_AES_128_CCM_8_SHA256
- C. TLS_CHACHA20_POLY1305_SHA256
- D. TLS_DHE_DSS_WITH_RC4_128_SHA

Answer: D

NEW QUESTION # 23

A company wants to protect its intellectual property from theft. The company has already applied ACLs and DACs.
Which of the following should the company use to prevent data theft?

- A. DRM
- B. Access logging
- C. Watermarking
- D. NDA

Answer: A

Explanation:
Explanation
DRM (digital rights management) is a technology that can protect intellectual property from theft by restricting the access, use, modification, or distribution of digital content or devices. DRM can use encryption, authentication, licensing, watermarking, or other methods to enforce the rights and permissions granted by the content owner or provider to authorized users or devices. DRM can prevent unauthorized copying, sharing, or piracy of digital content, such as software, music, movies, or books. Watermarking is not a technology that can protect intellectual property from theft by itself, but a technique that can embed identifying information or marks in digital content or media, such as images, audio, or video. Watermarking can help prove ownership or origin of digital content, but it does not prevent unauthorized access or use of it. NDA (non-disclosure agreement) is not a technology that can protect intellectual property from theft by itself, but a legal contract that binds parties to keep certain information confidential and not disclose it to unauthorized parties. NDA can help protect sensitive or proprietary information from exposure or misuse, but it does not prevent unauthorized access or use of it. Access logging is not a technology that can protect intellectual property from theft by itself, but a technique that can record the activities or events related to accessing data or resources. Access logging can help monitor or audit access to data or resources, but it does not prevent unauthorized access or use of them. Verified References:

NEW QUESTION # 25
A security analyst reviews network logs and notices a large number of domain name queries originating from an internal server for an unknown domain, similar to the following:
2736287327321782.hgQ43jsi23-y.com
0357320932922C91.hgQ43jsu23Ty.com
4042301801399103.hgQ43jsu23Ly.com
Which of the following should the analyst do next?

- A. Browse for a website on the requested domain.
- B. Reconfigure the server's DNS settings.
- C. Check for data exfiltration.
- D. Add the host names to a block list.

Answer: C

Explanation:
Step by Step
A high volume of DNS queries to unknown domains may indicate domain generation algorithm (DGA) activity associated with malware.
Checking for data exfiltration is the next logical step to determine if sensitive data is being leaked to these domains.
Reconfiguring DNS settings, browsing unknown domains, or blocking the domains are reactive steps that do not address the root cause.

NEW QUESTION # 26
A company security engineer arrives at work to face the following scenario:
1) Website defacement
2) Calls from the company president indicating the website needs to be fixed Immediately because It Is damaging the brand
3) A Job offer from the company's competitor
4) A security analyst's investigative report, based on logs from the past six months, describing how lateral movement across the network from various IP addresses originating from a foreign adversary country resulted in exfiltrated data Which of the following threat actors Is MOST likely involved?

- A. APT/nation-state
- B. Competitor
- C. Organized crime
- D. Script kiddie

Answer: A

NEW QUESTION # 27
......

Similarly, the ExamcollectionPass CompTIA CAS-004 practice test creates an actual exam scenario on each and every step so that you may be well prepared before your actual CompTIA Advanced Security Practitioner (CASP+) Exam examination time. Hence, it saves you time and money. ExamcollectionPass provides three months of free updates if you purchase the CompTIA CAS-004 Questions and the content of the examination changes after that.
