Passing the 156-215.81 and obtaining the certificate may be the fastest and most direct way to change your position and achieve your goal. And we are just right here to give you help to pass the 156-215.81 Exam. Being considered the most authentic brand in this career, our professional experts are making unremitting efforts to provide our customers the latest and valid 156-215.81 exam simulation.

CheckPoint Check Point Certified Security Administrator R81 Sample Questions (Q253-Q258):

NEW QUESTION # 253

What are the advantages of a "shared policy" in R80?

- A. Allows the administrator to share a policy between all the administrators managing the Security Management Server
- **B. Allows the administrator to share a policy so that it is available to use in another Policy Package**
- C. Allows the administrator to install a policy on one Security Gateway and it gets installed on another managed Security Gateway
- D. Allows the administrator to share a policy between all the users identified by the Security Gateway

Answer: B

Explanation:

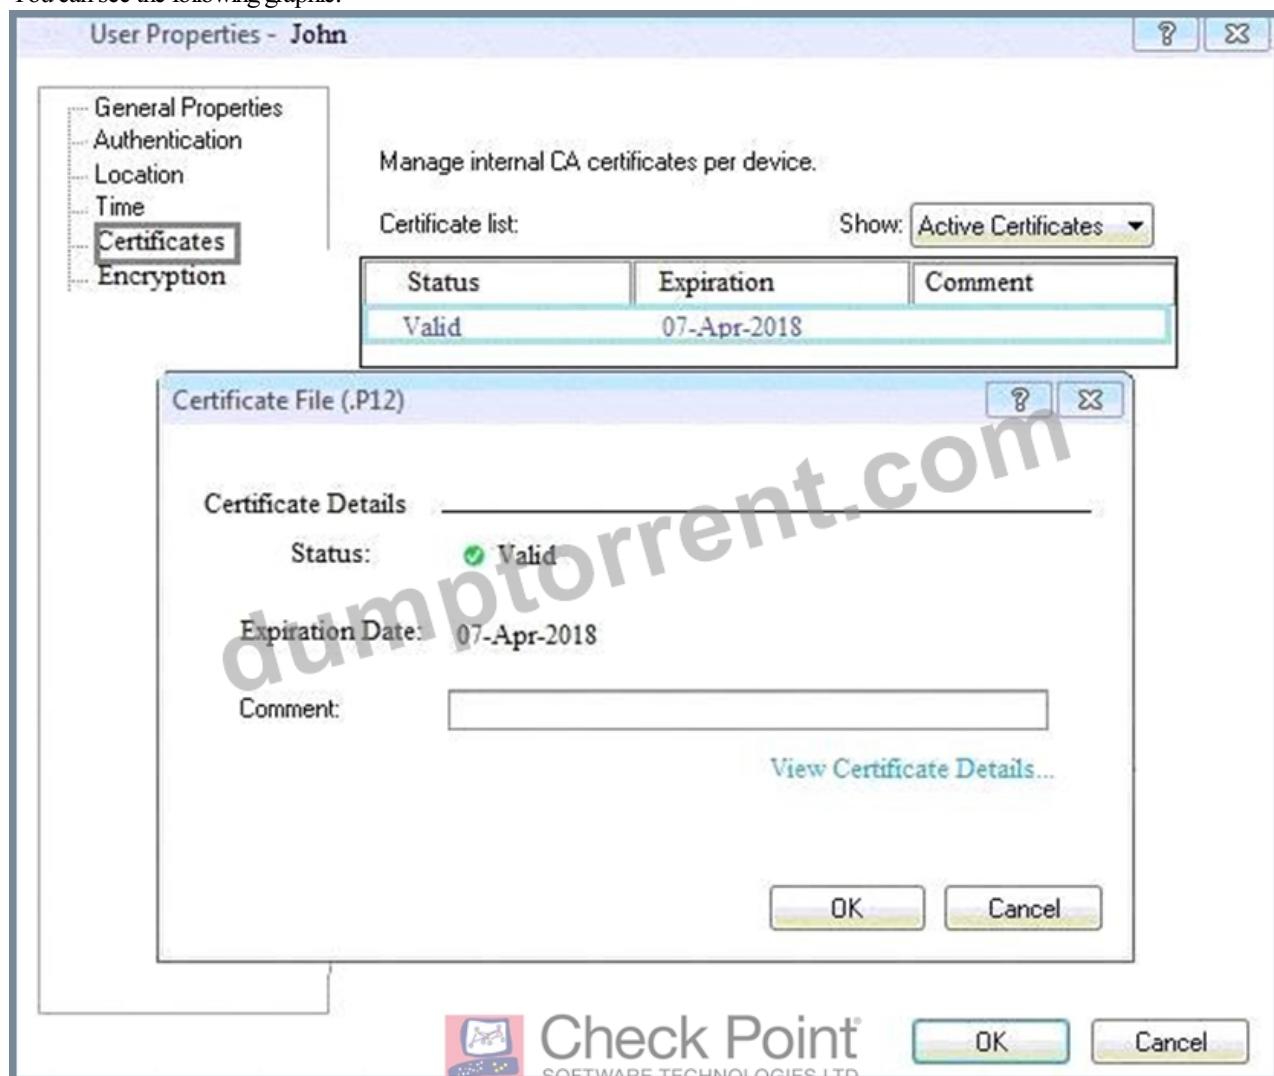

Explanation

A shared policy is a set of rules that can be used in multiple policy packages. It allows the administrator to create a common security policy for different gateways or domains, and avoid duplication and inconsistency.

The other options are not advantages of a shared policy. References: [Shared Policies Overview], [Shared Policies Best Practices]

NEW QUESTION # 254

You can see the following graphic:

What is presented on it?

- A. VPN certificate properties of the John's gateway.
- **B. Properties of personal .p12 certificate file issued for user John.**
- C. Expired .p12 certificate properties for user John.
- D. Shared secret properties of John's password.

Answer: B

Explanation:

Explanation

The answer is A because the graphic shows the properties of a personal .p12 certificate file issued for user John. A .p12 file is a file format that contains a user's private key and public key certificate. The graphic shows that the certificate file is valid and has an expiration date of 07-Apr-2018. The graphic also shows that the certificate file is issued by an internal CA, which is a Check Point component that manages certificates for users and gateways. References: Check Point R81 Certificate Management, Check Point R81 Internal CA

NEW QUESTION # 255

Administrator Dave logs into R80 Management Server to review and makes some rule changes. He notices that there is a padlock sign next to the DNS rule in the Rule Base.

No.	Name	Source	VPN	Services/ Applications	Action	Track	Install On
1	NetBIOS Noise	* Any		NBT	Drop	- None	* Policy Targets
2	Management	Net_10.28.0.0	GW-R7730	* Any https * Any ssh	Accept	Log	* Policy Targets
3	Stealth	* Any	GW-R7730	* Any * Any	Drop	Log	* Policy Targets
4	 DNS	Net_10.28.0.0	* Any	* Any * Any	Accept	Log	* Policy Targets
5	Web	Net_10.28.0.0	* Any	* Any https	Accept	Log	* Policy Targets
6	DMZ Access	Net_10.28.0.0	DMZ_Net_192.0.2.0	* Any * Any ftp	Accept	Log	* Policy Targets
7	Cleanup rule	* Any		* Any * Any	Drop	Log	* Policy Targets

What is the possible explanation for this?

- A. DNS Rule is a placeholder rule for a rule that existed in the past but was deleted.
- B. Another administrator is logged into the Management and currently editing the DNS Rule.**
- C. This is normal behavior in R80 when there are duplicate rules in the Rule Base.
- D. DNS Rule is using one of the new feature of R80 where an administrator can mark a rule with the padlock icon to let other administrators know it is important.

Answer: B

Explanation:

Explanation

The padlock sign next to the DNS rule in the Rule Base indicates that another administrator is logged into the Management and currently editing the DNS Rule1. This is a feature of R80 that allows multiple administrators to work on the same policy simultaneously. The padlock sign prevents other administrators from modifying the same rule until the editing administrator publishes or discards the changes2. The other options are not valid explanations for the padlock sign. References: 156-215.80 : Check Point Certified Security Administrator (CCSA R80) : Part 19, Multi-User Policy Editing

NEW QUESTION # 256

In order to modify Security Policies, the administrator can use which of the following tools? (Choose the best answer.)

- A. Command line of the Security Management Server or mgmt_cli.exe on any Windows computer.
- B. SmartConsole or mgmt_cli (API) on any computer where SmartConsole is installed.**
- C. mgmt_cli (API) or WebUI on Security Gateway and SmartConsole on the Security Management Server.
- D. SmartConsole and WebUI on the Security Management Server.

Answer: B

Explanation:

Explanation

In order to modify Security Policies, the administrator can use SmartConsole or mgmt_cli (API) on any computer where SmartConsole is installed. SmartConsole is a graphical tool that allows the administrator to create, edit, and manage security policies using a web browser. mgmt_cli (API) is a command-line tool that allows the administrator to perform the same tasks using commands and scripts. Both tools can connect to the Security Management Server remotely from any computer that has SmartConsole installed. References:

[SmartConsole Overview], [mgmt_cli (API)]

NEW QUESTION # 257

VPN gateways must authenticate to each other prior to exchanging information. What are the two types of credentials used for authentication?

- A. IPsec and VPN Domains
- B. Certificates and pre-shared secret
- C. 3DES and MD5
- D. Certificates and IPsec

Answer: B

NEW QUESTION # 258

.....
