Amazon AWS Certified Cloud Practitioner Sample Questions (Q599-Q604):

NEW QUESTION # 599

A company moves a workload to AWS to run on Amazon EC2 instances. The company needs to run the workload in the most cost-effective way.

What can the company do to meet this requirement?

- A. Use multiple AWS accounts and consolidated billing.
- **B. Rightsized all the EC2 instances that are used in the deployment.**
- C. Use AWS Key Management Service (AWS KMS).
- D. Use AWS CloudFormation to deploy the infrastructure.

Answer: B

Explanation:

Rightsizing all the EC2 instances that are used in the deployment is the best way to run the workload in the most cost-effective way. Rightsizing means choosing the optimal instance type and size for the workload based on the performance and capacity requirements. Rightsizing helps to avoid over-provisioning or under-provisioning of the EC2 instances, which can result in wasted resources or poor performance.

Rightsizing also helps to take advantage of the different pricing models and features that AWS offers, such as On-Demand, Reserved, and Spot Instances, and Auto Scaling. For more information, see [Rightsizing Your Instances](#) and [\[Cost Optimization with AWS\]](#).

NEW QUESTION # 600

Amazon Elastic File System (Amazon EFS) and Amazon FSx offer which type of storage?

- **A. File storage**
- B. Object storage
- C. Instance store
- D. Block storage

Answer: A

Explanation:

Explanation

Amazon Elastic File System (Amazon EFS) and Amazon FSx are AWS services that offer file storage. File storage is a type of storage that organizes data into files and folders that can be accessed and shared over a network. File storage is suitable for applications that require shared access to data, such as content management, media processing, and web serving. Amazon EFS provides a simple, scalable, and fully managed elastic file system that can be used with AWS Cloud services and on-premises resources. Amazon FSx provides fully managed third-party file systems, such as Windows File Server and Lustre, with native compatibility and high performance¹²

NEW QUESTION # 601

Which AWS service gives users the ability to provision a dedicated and private network connection from their internal network to AWS?

- A. AWS VPN
- **B. AWS Direct Connect**
- C. Amazon Connect
- D. AWS CloudHSM

Answer: B

Explanation:

Explanation

AWS Direct Connect gives users the ability to provision a dedicated and private network connection from their internal network to AWS. AWS Direct Connect links the user's internal network to an AWS Direct Connect location over a standard Ethernet fiber-optic cable. One end of the cable is connected to the user's router, the other to an AWS Direct Connect router. With this connection in place, the user can create virtual interfaces directly to the AWS cloud and Amazon Virtual Private Cloud (Amazon VPC),

bypassing internet service providers in the network path2.

NEW QUESTION # 602

A company needs to establish a dedicated network connection from on premises to AWS. The connection must provide consistent, low-latency network performance.

Which AWS service should the company use to meet this requirement?

- A. AWS Transit Gateway
- B. AWS Site-to-Site VPN
- C. AWS Direct Connect
- D. AWS Directory Service

Answer: C

NEW QUESTION # 603

Which AWS Cloud design principle is a company using when the company implements AWS CloudTrail?

- A. Perform operations as code.
- B. Use serverless compute architectures.
- C. Activate traceability.
- D. Go global in minutes.

Answer: C

Explanation:

By implementing AWS CloudTrail, a company is adhering to the AWS Cloud design principle of activating traceability. AWS CloudTrail provides detailed logs of all API calls made in an AWS account, which helps monitor, troubleshoot, and detect unusual activity, thereby improving security and compliance. This supports the principle of "activating traceability" by enabling continuous monitoring and auditing of all actions and changes within the AWS environment.

* B. Use serverless compute architectures: Incorrect, as this principle encourages the use of managed services that handle infrastructure, such as AWS Lambda, and is not directly related to CloudTrail.

* C. Perform operations as code: Incorrect, as this principle emphasizes the use of code and automation for infrastructure management.

* D. Go global in minutes: Incorrect, as this principle relates to the global deployment of applications and services.

AWS Cloud References:

* AWS Well-Architected Framework

* AWS CloudTrail
