

# Pass Guaranteed Fortinet - FCP\_FGT\_AD-7.4 - FCP - FortiGate 7.4 Administrator Newest Valid Exam Pattern

P.S. Free 2025 Fortinet FCP\_FGT\_AD-7.4 dumps are available on Google Drive shared by BootcampPDF:  
[https://drive.google.com/open?id=1XZ0LvTS2luoaz1sOU6Z\\_N6l75o\\_ByYA-](https://drive.google.com/open?id=1XZ0LvTS2luoaz1sOU6Z_N6l75o_ByYA-)

Our Fortinet FCP\_FGT\_AD-7.4 exam questions will correct your learning problems with the help of the test engine. All contents of FCP\_FGT\_AD-7.4 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our Fortinet FCP\_FGT\_AD-7.4 Quiz guide.

## Fortinet FCP\_FGT\_AD-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• VPN: In this section, the focus is on how to configure SSL VPNs for secure network access and implement meshed or redundant IPsec VPNs.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Content Inspection: This section covers how to inspect encrypted traffic, configure inspection modes, apply web filtering, manage applications, set antivirus modes, and implement IPS for security.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Firewall Policies and Authentication: This topic covers how to set firewall policies, configure SNAT</li> <li>• DNAT, implement authentication methods, and deploy FSSO.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Deployment and System Configuration: This section covers how to set up initial configurations, implement Fortinet Security Fabric, and configure an FGCP HA cluster; diagnose resources and connectivity.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Routing: This section covers how to set up packet routing with static routes and configure SD-WAN for efficient traffic load balancing.</li> </ul>

## Fortinet FCP\_FGT\_AD-7.4 Exam Dumps Free, FCP\_FGT\_AD-7.4 Latest Exam Answers

Our professions endeavor to provide you with the newest information on our FCP\_FGT\_AD-7.4 exam questions with dedication on a daily basis to ensure that you can catch up with the slight changes of the FCP\_FGT\_AD-7.4 exam. Therefore, our customers are able to enjoy the high-productive and high-efficient users' experience. In this circumstance, as long as your propose and demand on FCP\_FGT\_AD-7.4 Guide quiz are rational, we have the duty to guarantee that you can enjoy the one-year updating system for free.

## Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q68-Q73):

### NEW QUESTION # 68

Refer to the exhibit.

ID	Name	Source	Destination	Schedule	Service	Action	NAT	Type	Security Profiles
1	Full_Access	Remote-users LOCAL_SUB...	all	always	HTTP HTTPS ALL_ICMP	ACCEPT	NAT	Standard	Category_Monitor SSL certificate-inspection

FortiGate is configured for firewall authentication. When attempting to access an external website, the user is not presented with a login prompt.

What is the most likely reason for this situation?

- A. The Remote-users group is not added to the Destination.
- B. The Service DNS is required in the firewall policy.
- C. The user is using an incorrect user name.
- D. No matching user account exists for this user.

**Answer: B**

Explanation:

Firewall authentication generally requires the DNS service to be enabled in the firewall policy to correctly resolve hostnames during the authentication process. If DNS is not allowed in the firewall policy, the FortiGate cannot resolve external domains, and as a result, the user may not be presented with the login prompt when attempting to access an external website.

### NEW QUESTION # 69

Which two configuration settings are global settings? (Choose two.)

- A. FortiGuard settings
- B. User & Device settings
- C. HA settings
- D. Firewall policies

**Answer: A,C**

Explanation:

The two configuration settings that are global settings are:

C. HA settings - High Availability settings are typically configured globally to manage failover and redundancy.

D. FortiGuard settings - FortiGuard settings for security services and updates are also configured globally to ensure consistent protection across the network.

HA configuration overview. The purpose of an HA configuration is to reduce downtime when a zone or instance becomes unavailable. This might happen during a zonal outage, or when an instance runs out of memory. With HA, your data continues to be available to client applications.

FortiGuard > Settings provides a central location for configuring and enabling your FortiManager system's built-in FDS as an FDN override server.

### NEW QUESTION # 70

Which two statements about IPsec authentication on FortiGate are correct? (Choose two.)

- A. Enabling XAuth results in a faster authentication because fewer packets are exchanged.
- **B. For a stronger authentication, you can also enable extended authentication (XAuth) to request the remote peer to provide a username and password.**
- C. A certificate is not required on the remote peer when you set the signature as the authentication method.
- **D. FortiGate supports pre-shared key and signature as authentication methods.**

**Answer: B,D**

Explanation:

A: For a stronger authentication, you can also enable extended authentication (XAuth) to request the remote peer to provide a username and password.

B: FortiGate supports pre-shared key and signature as authentication methods.

A: XAuth provides an additional layer of authentication by requiring the remote peer to provide a username and password in addition to the pre-shared key or certificate. This enhances security.

B: FortiGate supports both pre-shared key and signature (using certificates) as authentication methods for IPsec VPN connections, offering flexibility based on security requirements.

C: Enabling XAuth does not necessarily result in faster authentication because additional packets are exchanged to complete the XAuth process.

D: When using the signature as the authentication method, a certificate is required on the remote peer for authentication, ensuring secure communication.

To authenticate each other, the peers use two methods: pre-shared key or digital signature. You can also enable an additional authentication method, XAuth, to enhance authentication.

### NEW QUESTION # 71

A network administrator wants to set up redundant IPsec VPN tunnels on FortiGate by using two IPsec VPN tunnels and static routes.

All traffic must be routed through the primary tunnel when both tunnels are up. The secondary tunnel must be used only if the primary tunnel goes down. In addition, FortiGate should be able to detect a dead tunnel to speed up tunnel failover.

Which two key configuration changes must the administrator make on FortiGate to meet the requirements?

(Choose two.)

- A. Configure a higher distance on the static route for the primary tunnel, and a lower distance on the static route for the secondary tunnel.
- **B. Configure a lower distance on the static route for the primary tunnel, and a higher distance on the static route for the secondary tunnel.**
- **C. Enable Dead Peer Detection**
- D. Enable Auto-negotiate and Autokey Keep Alive on the phase 2 configuration of both tunnels.

**Answer: B,C**

Explanation:

To configure redundant IPsec VPN tunnels on FortiGate with failover capability, the following two key configuration changes are required:

\* A. Enable Dead Peer Detection (DPD): Dead Peer Detection is crucial for detecting if the remote peer is unreachable. By enabling DPD, FortiGate can quickly detect a dead tunnel, ensuring a faster failover to the secondary tunnel when the primary tunnel goes

down.

\* C. Configure a lower distance on the static route for the primary tunnel and a higher distance on the static route for the secondary tunnel: The static route with the lower distance (higher priority) will be used when both tunnels are operational. If the primary tunnel fails, the higher distance (lower priority) route for the secondary tunnel will take over, ensuring traffic is routed correctly.

The other options are not suitable:

\* B. Enable Auto-negotiate and Autokey Keep Alive on the phase 2 configuration of both tunnels:

This option is not directly related to the requirements of failover between two IPsec VPN tunnels.

\* D. Configure a higher distance on the static route for the primary tunnel and a lower distance on the static route for the secondary tunnel: This would prioritize the secondary tunnel over the primary tunnel, which is opposite to the desired configuration.

## NEW QUESTION # 72

When FortiGate performs SSL/SSH full inspection, you can decide how it should react when it detects an invalid certificate. Which three actions are valid actions that FortiGate can perform when it detects an invalid certificate? (Choose three.)

- A. Trust & Allow
- B. Allow & Warning
- C. Block & Warning
- D. Block
- E. Allow

**Answer: A,D,E**

Explanation:

When a certificate fails for any of the reasons above, you can configure any of the following actions: \* Keep untrusted & Allow: FortiGate allows the website and lets the browser decide the action to take. FortiGate takes the certificate as untrusted. \* Block: FortiGate blocks the content of the site. \* Trust & Allow: FortiGate allows the website and takes the certificate as trusted.
