

# Pass Guaranteed GH-200 - GitHub Actions–Efficient Exam Dumps.zip

As the captioned description said, our GH-200 practice materials are filled with the newest points of knowledge about the exam. With many years of experience in this line, we not only compile real test content into our GH-200 practice materials, but the newest in to them. Allowing for there is a steady and growing demand for our GH-200 practice materials with high quality at moderate prices, we never stop the pace of doing better. All newly supplementary updates will be sent to your mailbox one year long. And we shall appreciate it if you choose any version of our GH-200 practice materials for exam and related tests in the future.

## Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.</li></ul>

## Valid Brindumps GH-200 Ppt | GH-200 Guaranteed Success

The contents of GH-200 learning questions are carefully compiled by the experts according to the content of the GH-200 examination syllabus of the calendar year. They are focused and detailed, allowing your energy to be used in important points of knowledge and to review them efficiently. In addition, GH-200 Guide engine is supplemented by a mock examination system with a time-taking function to allow users to check the gaps in the course of learning.

### Microsoft GitHub Actions Sample Questions (Q10-Q15):

#### NEW QUESTION # 10

You installed specific software on a Linux self-hosted runner. You have users with workflows that need to be able to select the runner based on the identified custom software. Which steps should you perform to prepare the runner and your users to run these workflows? (Each correct answer presents part of the solution. Choose two.)

- A. Add the label linux to the runner.
- **B. Inform users to identify the runner with the labels custom-software and linux.**
- C. Configure the webhook and network to enable GitHub to trigger workflow.
- **D. Add the label custom-software to the runner.**
- E. Create the group custom-software-on-linux and move the runner into the group.
- F. Inform users to identify the runner based on the group.

**Answer: B,D**

Explanation:

[F] Add a label for the custom software as required.

Note: Using labels with self-hosted runners

You can use labels to organize your self-hosted runners based on their characteristics.

Creating a custom label

You can create custom labels for runners at the repository and organization levels.

[C, not D] Linux is a default label and does not have to be created to be used.

Reference:

<https://docs.github.com/en/actions/how-to/manage-runners/self-hosted-runners/apply-labels>

#### NEW QUESTION # 11

You have exactly one Windows x64 self-hosted runner, and it is configured with custom tools. Which syntax could you use in the workflow to target that runner?

- A. self-hosted: [windows, x64]
- B. runs-on: windows-latest
- **C. runs-on: [self-hosted, windows, x64]**
- D. self-hosted: [windows-x64]

**Answer: C**

Explanation:

The runs-on keyword allows you to specify the operating system and other labels for the runner. By specifying self-hosted, windows, and x64, you are targeting a self-hosted Windows runner that matches these criteria, which aligns with the custom configuration of your self-hosted runner.

#### NEW QUESTION # 12

GitHub-hosted runners support which capabilities? (Each correct answer presents a complete solution. Choose two.)

- A. requiring a payment mechanism (e.g., credit card) to use for private repositories

- B. support for Linux, Windows, and macOS
- C. automatic patching of both the runner and the underlying OS
- D. support for a variety of Linux variations including CentOS, Fedora, and Debian
- E. automatic file-system caching between workflow runs

**Answer: B,C**

Explanation:

[A, not B] Each GitHub-hosted runner is a new virtual machine (VM) hosted by GitHub with the runner application and other tools preinstalled, and is available with Ubuntu Linux, Windows, or macOS operating systems.

[E] When you use a GitHub-hosted runner, machine maintenance and upgrades are taken care of for you.

<https://docs.github.com/en/enterprise-server@3.17/actions/concepts/runners/github-hosted-runners>

### NEW QUESTION # 13

Which of the following statements are true regarding the use of GitHub Actions on a GitHub Enterprise Server instance? (Each correct answer presents a complete solution. Choose three.)

- A. Third-party actions can be used on GitHub Enterprise Server by configuring GitHub Connect.
- B. Actions must be defined in the .github repository.
- C. Use of GitHub Actions on GitHub Enterprise Server requires a persistent internet connection.
- D. Actions created by GitHub are automatically available and cannot be disabled.
- E. Most GitHub-authored actions are automatically bundled for use on GitHub Enterprise Server.
- F. Third-party actions can be manually synchronized for use on GitHub Enterprise Server.

**Answer: A,E,F**

Explanation:

[B] If you want your GitHub Enterprise Server instance to use third-party custom actions, you need to enable GitHub Connect.

[C] Most official GitHub-authored actions are automatically bundled with GitHub Enterprise Server, and are captured at a point in time from GitHub Marketplace.

[F] Third-party actions can be manually synchronized to GitHub Enterprise Server (GHES) to be used in workflows without requiring an internet connection to GitHub.com. This is done using the actions-sync tool to download actions from GitHub.com and transfer them to the GHES instance.

This manual method provides an alternative to using GitHub Connect, offering stricter control over which actions are available on the GHES instance.

<https://docs.github.com/en/enterprise-server@3.17/admin/managing-github-actions-for-your-enterprise/managing-access-to-actions-from-githubcom/about-using-actions-in-your-enterprise>

### NEW QUESTION # 14

Which GitHub Actions capability prevents secrets from appearing in workflow logs?

- A. Manual approval for secret log output
- B. Default secret masking in logs
- C. Encrypted secrets written to logs
- D. GitHub Audit Log

**Answer: B**

Explanation:

GitHub Actions automatically redacts secret values from workflow logs so if a command prints a secret the value is masked in the output. This built in protection helps prevent accidental exposure of credentials during job execution and it applies without additional configuration.

### NEW QUESTION # 15

.....

The industry experts hired by GH-200 exam materials are those who have been engaged in the research of GH-200 exam for many years. They have a keen sense of smell in the direction of the exam. Therefore, they can make accurate predictions on the exam questions. Therefore, our study materials specifically introduce a mock examination function. With GH-200 exam materials, you can not only feel the real exam environment, but also experience the difficulty of the exam. You can test your true level through simulated exams. At the same time, after repeated practice of GH-200 study braindumps, I believe that you will feel familiar with these questions during the exam and you will feel that taking the exam is as easy as doing exercises in peace. According to our statistics on the data so far, the passing rate of the students who have purchased one exam exceeds 99%, which is enough to see that GH-200 test guide is a high-quality product that can help you to realize your dream.
