The Selling HPE Aruba Networking Solutions (HPE2-W12) practice questions have a close resemblance with the actual Selling HPE Aruba Networking Solutions (HPE2-W12) exam. Our HP HPE2-W12 exam dumps give help to give you an idea about the actual Selling HPE Aruba Networking Solutions (HPE2-W12) exam. You can attempt multiple Selling HPE Aruba Networking Solutions (HPE2-W12) exam questions on the software to improve your performance.

HP Selling HPE Aruba Networking Solutions Sample Questions (Q27-Q32):

NEW QUESTION # 27

What is one of the advantages of selling HPE GreenLake for Networking Service Packs?

- A. They enable you to add HPE Aruba Networking Intelligent Operations at discounted rate.
- **B. They simplify the process of designing and selling network-as-a-service solutions to customers.**
- C. They enable you to provide customers with fully customizable network-as-a-service solutions.
- D. They enable you to sell HPE Aruba Networking solutions not available as traditional purchases.

Answer: B

Explanation:

The correct answer is B because HPE GreenLake for Networking Service Packs are pre-defined bundles of network-as-a-service offerings that simplify how partners and customers can consume, design, and deliver network-as-a-service (NaaS). Instead of requiring custom design and lengthy proposals for every customer, Service Packs provide standardized offerings that accelerate adoption and make it easier for partners to sell NaaS consistently.

Relevant extracts from HPE Aruba Networking documentation:

* "GreenLake Service Packs simplify the design, sale, and deployment of NaaS by providing pre-defined packages for different customer needs."

* "These Service Packs accelerate time-to-value by offering ready-to-deploy solutions aligned to common customer requirements."

* "Service Packs reduce complexity in NaaS transactions, making it easier for partners to design, price, and deliver GreenLake solutions."

* "With HPE GreenLake for Networking, partners can streamline NaaS offerings and customers can adopt consumption-based models faster." Why the other options are incorrect:

* A Intelligent Operations is not tied to discounted pricing through Service Packs.

* C Service Packs are standardized, not fully customizable; customization is available through broader GreenLake engagements.

* D GreenLake Service Packs do not exist to sell "unavailable" solutions but to simplify how existing Aruba solutions are consumed as-a-service.

NEW QUESTION # 28

Which approach should you take when selling the value of AI for networking capabilities in HPE Aruba Networking Central?

- A. Explain how it identifies network issues before they affect users, eliminates manual troubleshooting, and provides tips for network optimization.
- B. Describe how it helps customers apply intelligent access policies across the network, reducing organizations' overall risk.
- C. Focus on explaining the difference between machine learning and other forms of artificial intelligence.
- D. Show how it can better align the data center IT operations team with the application development team.

Answer: A

Explanation:

The correct answer is A because Aruba Central's AI for Networking capabilities focus on proactively detecting issues before they impact end-users, automating troubleshooting, and offering prescriptive recommendations for optimization. This messaging resonates with customers by highlighting tangible outcomes—reduced downtime, faster resolution, and improved IT efficiency.

Relevant extracts from official HPE Aruba Networking documentation:

* "Aruba Central uses AI/ML to identify anomalies and potential problems before they affect users, reducing mean time to resolution and preventing service disruptions."

* "With AI Insights and AI Assist, Aruba Central automates troubleshooting and eliminates repetitive manual tasks for IT teams."

* "Central provides prescriptive recommendations and optimization tips that enable IT to deliver consistently better user and application experiences."

* "By leveraging AI-driven analytics, IT teams shift from reactive troubleshooting to proactive operations, saving time and focusing on innovation." Why the other options are incorrect:

* A Focusing on technical differences between AI and machine learning is not relevant for a customer value-driven discussion.

* B Aligning IT and development teams is more of a DevOps discussion, not directly tied to Aruba Central's AI value.

* C Intelligent access policies are part of Aruba Zero Trust and ClearPass solutions, not the primary selling point of Central's AI features.

NEW QUESTION # 29

Which outcome could the customer achieve with Network Insights in HPE Aruba Networking Central?

- A. Search for users, endpoints, or locations status; provide a status report; and automatically resolve any issues detected.
- **B. Identify performance issues and follow recommendations for resolving the issue.**
- C. Automatically detect any client connecting to the network and block any client with suspicious behavior.
- D. Detect and profile Internet of Things (IoT) devices connected to the network.

Answer: B

Explanation:

The correct answer is B because Aruba Network Insights, a feature of Aruba Central's AI-powered operations (AIOps), focuses on identifying performance issues and providing actionable, prescriptive recommendations to resolve them. This enables IT teams to proactively address network issues before they impact end users, improving operational efficiency and minimizing downtime.

Relevant extracts from official HPE Aruba Networking documentation:

* "Aruba Central AIOps with Network Insights provides actionable recommendations to resolve network performance issues."

* "AI/ML-based analytics continuously monitor network health, identifying anomalies and performance degradations."

* "By offering prescriptive guidance, Central reduces mean time to resolution (MTTR) and empowers IT teams to optimize the network."

* "Network Insights transforms reactive troubleshooting into proactive operations by identifying issues early and suggesting corrective actions." Why the other options are incorrect:

* B Blocking suspicious clients is part of ClearPass Policy Manager and Zero Trust enforcement, not Network Insights.

* C Searching for users and endpoints with automated resolution aligns more with ClearPass and Client Insights, not Network Insights.

* D IoT profiling is handled by Device Insight, not Network Insights.

NEW QUESTION # 30

A senior IT manager tells you that she wants IT staff members to spend less time troubleshooting issues so they have more time to focus on new initiatives. How can HPE Aruba Networking deliver the senior IT manager's desired outcome?

- A. HPE Aruba Networking Edge-to-Cloud solutions rely on AI to automate the onboarding of devices.
- B. HPE Aruba User Experience Insight (UXI) helps IT determine why data center applications are not performing as well as they should.
- C. HPE Aruba Networking ClearPass monitors network devices' performance and automatically notifies IT admins of performance issues.
- **D. HPE Aruba Networking Central with AI for Networking accelerates troubleshooting by providing insights and recommendations that help remedy issues.**

Answer: D

Explanation:

The correct answer is D because Aruba Central with AI for Networking leverages machine learning and AI-powered insights to accelerate troubleshooting, provide root-cause analysis, and deliver prescriptive recommendations. This reduces the time IT staff spends on manual problem-solving, freeing them to focus on innovation and strategic initiatives.

Relevant extracts from official HPE Aruba Networking documentation:

* "Aruba Central with AIOps accelerates troubleshooting by automatically identifying anomalies, pinpointing root causes, and providing prescriptive recommendations."

* "By reducing mean time to resolution (MTTR), Aruba Central enables IT teams to shift focus from reactive firefighting to proactive innovation."

* "AI Insights and AI Assist capabilities within Central simplify operations by automating repetitive tasks and providing contextual recommendations to resolve issues quickly."

* "This ensures that network performance issues are addressed before they affect users, minimizing downtime and IT overhead."

Why the other options are incorrect:

* A ClearPass focuses on access control and policy enforcement, not AI-driven troubleshooting acceleration.

* BUXI provides valuable end-user experience monitoring but does not deliver AI-driven root cause analysis across the

infrastructure.

* CAutomated onboarding is not the primary driver of reducing troubleshooting time-it's about operational AI for problem detection and resolution in Central.

References (HPE Aruba Networking Solutions / Study Guides):

- * Aruba ESP (Edge Services Platform) - Technical White Paper
- * Aruba AI Insights and AI Assist - Product Brief
- * Aruba Central AI-Powered Operations - Deployment Guide

NEW QUESTION # 31

A customer wants to know what makes HPE Aruba Networking ZTNA better than a traditional virtual private network (VPN). What is one key distinguishing value?

- A. HPE Aruba Networking ZTNA decreases complexity with its on-prem management platform.
- B. The cost of the solution is lower than a traditional VPN because HPE Aruba Networking ZTNA uses HPE Aruba Networking gateways.
- C. HPE Aruba Networking ZTNA shrinks the attack surface by automatically creating and applying least- privilege policies.
- D. The cloud-based solution seamlessly scales to accommodate customers' growing remote workforce.

Answer: C

Explanation:

The correct answer is C because Aruba Zero Trust Network Access (ZTNA) fundamentally reduces risk by replacing broad, implicit trust models of VPNs with least-privilege, identity-based access policies. Instead of giving remote users blanket access to the network, ZTNA dynamically enforces application- and user- specific policies, shrinking the attack surface and preventing lateral movement.

Relevant extracts from official HPE Aruba Networking documentation:

- * "ZTNA applies Zero Trust principles by continuously verifying user and device identity and assigning least-privilege access based on contextual factors."
 - * "Unlike traditional VPNs that extend full network access, Aruba ZTNA provides per-application access, dramatically reducing the attack surface."
 - * "With automated policy enforcement, Aruba ZTNA ensures secure access while preventing unauthorized lateral movement across the network."
 - * "ZTNA secures the remote workforce by combining granular access control with Zero Trust segmentation, delivering stronger security than legacy VPN models." Why the other options are incorrect:
 - * A Scalability is a benefit, but it is not the key distinguishing factor compared to VPN-least-privilege security is the core differentiation.
 - * B Aruba ZTNA is cloud-native, not dependent on an on-prem management platform, so this is inaccurate.
 - * D Lower cost is not the primary positioning; the value lies in enhanced security and reduced risk.
- References (HPE Aruba Networking Solutions / Study Guides):
- * Aruba Zero Trust Network Access (ZTNA) - Solution Overview
 - * Aruba ESP Zero Trust Security - Technical White Paper
 - * Aruba SSE and ZTNA for Remote Workforce - Product Brief
