The CDPSE certification program is developed and administered by the Information Systems Audit and Control Association (ISACA), a leading global association for IT governance, audit, and cybersecurity professionals.

## **ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q201-Q206):**

### **NEW QUESTION # 201**

Which of the following is the MOST important consideration for developing data retention requirements?

- A. Industry guidelines
- B. Data classification rules
- C. Cost-benefit analysis
- **D. Applicable regulations**

**Answer: D**

Explanation:

Explanation

The most important consideration for developing data retention requirements is the applicable regulations that govern the data. Different types of data may be subject to different legal and regulatory obligations, such as how long the data must be kept, how it must be protected, and how it can be accessed or disposed of. Failing to comply with these obligations can result in fines, penalties, lawsuits, or reputational damage for the organization. Therefore, it is essential to identify and follow the applicable regulations for each data category.

### **NEW QUESTION # 202**

An online business posts its customer data protection notice that includes a statement indicating information is collected on how products are used, the content viewed, and the time and duration of online activities. Which data protection principle is applied?

- **A. Lawfulness and fairness**
- B. System use requirements
- C. Data integrity and confidentiality
- D. Data use limitation

**Answer: A**

Explanation:

Lawfulness and fairness is a data protection principle that states that personal data should be processed in a lawful, fair, and transparent manner in relation to the data subject. This means that personal data should be collected and used for legitimate purposes that are specified and communicated to the data subject, and that respect the rights and interests of the data subject. By posting its customer data protection notice that includes a statement indicating information is collected on how products are used, the content viewed, and the time and duration of online activities, an online business is applying the lawfulness and fairness principle. The online business is informing the customers about the purpose and scope of data collection, and obtaining their consent or legal basis for processing their personal data. ### **NEW QUESTION # 203**

Which of the following should an IT privacy practitioner do FIRST before an organization migrates personal data from an on-premise solution to a cloud-hosted solution?

- A. Conduct a security risk assessment.
- **B. Perform a privacy impact assessment (PIA).**
- C. Ensure strong encryption is used.

- D. Develop and communicate a data security plan.

**Answer: B**

Explanation:

Explanation

The first thing that an IT privacy practitioner should do before an organization migrates personal data from an on-premise solution to a cloud-hosted solution is to perform a privacy impact assessment (PIA). A PIA is a systematic process of identifying and evaluating the potential privacy risks and impacts of a data processing activity or system. A PIA helps to ensure that privacy is considered and integrated into the design and development of data processing activities or systems, and that privacy risks are mitigated or eliminated. A PIA also helps to determine the appropriate measures to protect personal data in a cloud-hosted solution, such as encryption, pseudonymization, anonymization, access control, audit trail, breach notification, etc. A PIA also helps to comply with the applicable privacy regulations and standards that govern data processing activities in a cloud-hosted solution. #### NEW QUESTION # 204

What is the BEST way for an organization to maintain the effectiveness of its privacy breach incident response plan?

- A. Hire a third party to perform a review of data privacy processes.
- B. Conduct annual data privacy tabletop exercises.
- C. Require security management to validate data privacy security practices.
- D. Involve the privacy office in an organizational review of the incident response plan.

**Answer: C**

Explanation:

Because many privacy incidents are also security incidents, the development of a privacy incident response plan should be performed in close cooperation with the security manager to avoid duplication of effort and to utilize existing response plan resources and practices.

#### NEW QUESTION # 205

Which of the following zones within a data lake requires sensitive data to be encrypted or tokenized?

- A. Raw zone
- B. Trusted zone
- C. Temporal zone
- D. Clean zone

**Answer: A**

Explanation:

A raw zone is a zone within a data lake that contains unprocessed or unstructured data that is ingested from various sources without any transformation or validation. A raw zone may contain sensitive data that has not been identified or classified yet, such as personal data. Therefore, sensitive data in a raw zone should be encrypted or tokenized to protect its confidentiality and integrity. Encryption is a process of transforming data into an unreadable form using a secret key or algorithm. Tokenization is a process of replacing sensitive data with non-sensitive substitutes called tokens. Both encryption and tokenization help to prevent unauthorized or unlawful access, use, disclosure, or transfer of sensitive data in a raw zone.
