And you will find that our practice questions will appear in your actual exam. When you choose our help, ExamPrepAway can not only give you the accurate and comprehensive examination materials, but also give you a year free update service.

## **DSCI Certified Privacy Lead Assessor DCPLA certification Sample**

## Questions (Q76-Q81):

### NEW QUESTION # 76

As a privacy assessor, what would most likely be the first artefact you would ask for while assessing an organization which claims that it has implemented a privacy program?

- A. Records of deployed privacy notices and statements
- B. Personal information management policy
- **C. Privacy risk management framework**
- D. Records of privacy specific training imparted to the employees handling personal information

**Answer: C**

### NEW QUESTION # 77

Which of the following factors is least likely to be considered while implementing or augmenting data security solution for privacy protection?

- **A. Training and awareness program for third party organizations**
- B. Information security infrastructure up-gradation in the organization
- C. Security controls deployment at the database level
- D. Classification of data type and its usage by various functions in the organization

**Answer: A**

Explanation:

While training third-party organizations is a relevant privacy governance function, it is not a primary technical or operational consideration when implementing data security solutions.

The other options (A, B, and C) directly relate to core security architecture, system-level controls, and data governance - all essential for privacy protection at a system level.

Hence, D is least likely to be considered in technical implementation.

### NEW QUESTION # 78

FILL BLANK

IUA and PAT

The company has a very mature enterprise level access control policy to restrict access to information. There is a single sign-on platform available to access company resources such as email, intranet, servers, etc.

However, the access policy in client relationships varies depending on the client requirements. In fact, in many cases clients provide access ids to the employees of the company and manage them. Some clients also put technical controls to limit access to information such data masking tool, encryption, and anonymizing data, among others. Some clients also record the data collection process to monitor if the employee of the company does not collect more data than is required. Taking cue from the best practices implemented by the clients, the company, through the consultants, thought of realigning its access control policy to include control on data collection and data usage by the business functions and associated third parties. As a first step, the consultants advised the company to start monitoring the PI collection, usage and access by business functions without their knowledge. The IT function was given the responsibility to do the monitoring, as majority of the information was handled electronically. The analysis showed that many times, more information than necessary was collected by the some functions, however, no instances of misuse could be identified.

After few days of this exercise, a complaint was registered by a female company employee in the HR function against a male employee in IT support function. The female employee accused the male employee of accessing her photographs stored on a shared drive and posting it on a social networking site.

(Note: Candidates are requested to make and state assumptions wherever appropriate to reach a definitive conclusion) Introduction and Background XYZ is a major India based IT and Business Process Management (BPM) service provider listed at BSE and NSE. It has more than 1.5 lakh employees operating in 100 offices across 30 countries. It serves more than

500 clients across industry verticals - BFSI, Retail, Government, Healthcare, Telecom among others in Americas, Europe, Asia-Pacific, Middle East and Africa. The company provides IT services including application development and maintenance, IT Infrastructure management, consulting, among others. It also offers IT products mainly for its BFSI customers.

The company is witnessing phenomenal growth in the BPM services over last few years including Finance and Accounting including credit card processing, Payroll processing, Customer support, Legal Process Outsourcing, among others and has rolled out platform based services. Most of the company's revenue comes from the US from the BFSI sector. In order to diversify its portfolio, the company is looking to expand its operations in Europe. India, too has attracted company's attention given the phenomenal increase

in domestic IT spend esp. by the government through various large scale IT projects. The company is also very aggressive in the cloud and mobility space, with a strong focus on delivery of cloud services. When it comes to expanding operations in Europe, company is facing difficulties in realizing the full potential of the market because of privacy related concerns of the clients arising from the stringent regulatory requirements based on EU General Data Protection Regulation (EU GDPR).

To get better access to this market, the company decided to invest in privacy, so that it is able to provide increased assurance to potential clients in the EU and this will also benefit its US operations because privacy concerns are also on rise in the US. It will also help company leverage outsourcing opportunities in the Healthcare sector in the US which would involve protection of sensitive medical records of the US citizens.

The company believes that privacy will also be a key differentiator in the cloud business going forward. In short, privacy was taken up as a strategic initiative in the company in early 2011.

Since XYZ had an internal consulting arm, it assigned the responsibility of designing and implementing an enterprise wide privacy program to the consulting arm. The consulting arm had very good expertise in information security consulting but had limited expertise in the privacy domain. The project was to be driven by CIO's office, in close consultation with the Corporate Information Security and Legal functions.

What role can training and awareness play here? (250 to 500 words)

**Answer:**

Explanation:

See the answer in explanation below.

Explanation:

Training and awareness play an essential role in the successful implementation of a comprehensive privacy program. This is especially true for an organization that has limited expertise on the subject. Training and awareness help to ensure that everyone understands their obligations under the EU GDPR as well as other applicable laws and regulations, while also providing employees with best practices to ensure data protection.

One way to ensure optimal training and awareness is by creating a comprehensive training curriculum tailored specifically for XYZ's needs. The curriculum should cover topics such as data privacy rights, compliance requirements, impact assessment, access control measures, encryption technologies, incident response plans and more. Additionally, it should be augmented with practical examples so that employees can understand how these principles apply in different scenarios.

Moreover, a comprehensive awareness program should be established to keep all employees informed of the latest developments in privacy law. This can include newsletters, webinars and other communications that explain changes in laws or policies, provide information on new technologies, or even give advice on how to handle particular challenges.

Finally, management should ensure that there are measures in place to evaluate the effectiveness of the training and awareness programs. This can include surveys, interviews with staff members and other methods such as focus groups or workshops. All these means will help XYZ assess whether its employees understand their obligations under the GDPR and other applicable laws and regulations.

By creating a comprehensive training curriculum tailored specifically for its needs and establishing an effective awareness program, XYZ can ensure that everyone in the organization is better informed and aware of their responsibilities under the GDPR. This, in turn, will help to improve compliance with the applicable laws and regulations while protecting its customers' data. Ultimately, this will allow the company to realize its full potential on the European market.

By investing in training and awareness programs, XYZ demonstrates a commitment to proper privacy procedures which will not only benefit its operations in Europe but also those in the US. It is essential for any company operating today to prioritize privacy so that it can build client trust as well as remain compliant with regulations. With an effective training and awareness program in place, XYZ can confidently approach both current and potential clients knowing that their data will be secure.

Overall, training and awareness are important components of a successful privacy program. By investing in these programs, XYZ can ensure that everyone is informed and aware of their responsibilities under the GDPR and other applicable laws and regulations. This, in turn, will help to protect customer data while also improving compliance with applicable laws. Ultimately, this will help XYZ realize its full potential on the European market as well as build client trust.

By establishing a comprehensive training and awareness program, XYZ will be better prepared to handle the challenges of data privacy regulation. With the proper methods in place, the company can not only protect its customers' data but also remain compliant with laws and regulations. This, in turn, will help it achieve success on both domestic and international markets. Ultimately, investing in training and awareness is essential for any organization operating today.

**NEW QUESTION # 79**

Before planning the assessment, priority areas need to be determined by conducting a Risk Management exercise. To adequately identify such priority areas, what possible parameters could be considered? (Tick all that apply)

- A. Functions / processes dealing with sensitive personal information such as Personal Health Information (PHI), credit card information, biometrics, among others
- B. Degree of harm that could result from potential privacy breach

- C. Degree of involvement of third parties in processing personal information
- D. Business-related IP dealt by a process/function
- E. Deployment of technology solutions that could potentially intrude privacy
- F. Functions / processes involved in data collection from end customers

**Answer: A,B,C,E,F**

Explanation:

According to the DSCI Assessment Framework for Privacy (DAF-P©), risk-based prioritization is essential in planning privacy assessments. Organizations are advised to consider parameters such as the degree of harm from a potential privacy breach, the involvement of processes that handle sensitive personal data (e.g., PHI or biometrics), technology solutions that may affect privacy, and the extent of third-party involvement. These help determine the areas with high privacy risks needing immediate attention. C (business-related IP) is typically an information security concern, not a privacy concern unless it involves personal data.

#### **NEW QUESTION # 80**

**FILL BLANK**

**IUA and PAT**

The company has a very mature enterprise level access control policy to restrict access to information. There is a single sign-on platform available to access company resources such as email, intranet, servers, etc. However, the access policy in client relationships varies depending on the client requirements. In fact, in many cases clients provide access ids to the employees of the company and manage them. Some clients also put technical controls to limit access to information such data masking tool, encryption, and anonymizing data, among others. Some clients also record the data collection process to monitor if the employee of the company does not collect more data than is required. Taking cue from the best practices implemented by the clients, the company, through the consultants, thought of realigning its access control policy to include control on data collection and data usage by the business functions and associated third parties. As a first step, the consultants advised the company to start monitoring the PI collection, usage and access by business functions without their knowledge. The IT function was given the responsibility to do the monitoring, as majority of the information was handled electronically. The analysis showed that many times, more information than necessary was collected by the some functions, however, no instances of misuse could be identified. After few days of this exercise, a complaint was registered by a female company employee in the HR function against a male employee in IT support function. The female employee accused the male employee of accessing her photographs stored on a shared drive and posting it on a social networking site.

(Note: Candidates are requested to make and state assumptions wherever appropriate to reach a definitive conclusion) Introduction and Background XYZ is a major India based IT and Business Process Management (BPM) service provider listed at BSE and NSE. Since XYZ had an internal consulting arm, it assigned the responsibility of designing and implementing an enterprise wide privacy program to the consulting arm. The consulting arm had very good expertise in information security consulting but had limited expertise in the privacy domain. The project was to be driven by CIO's office, in close consultation with the Corporate Information Security and Legal functions.

What should the company do to limit data collection and usage and at the same time ensure that such kinds of incidents don't reoccur? (250 to 500 words)

**Answer:**

#### Explanation:

XYZ should strive to create a comprehensive privacy policy that addresses all aspects of data collection, usage and storage. This will both protect the company from legal liabilities as well as create an environment of trust between customers and the organization. It should also ensure that proper security controls are in place for both on-premise systems as well as cloud services. The policy should outline details regarding access privileges and procedures for handling sensitive personal information including photographs. Further, XYZ should conduct regular training sessions with employees, especially those in IT support functions, to enhance their knowledge about the company's privacy policies and procedures. An employee code of conduct outlining restrictions on the misuse of data must be implemented and communicated clearly to all stakeholders involved in data processing activities. The company should also implement technical measures such as encryption and pseudonymisation of data, which will ensure that the data is only accessible by authorized personnel with proper privileges.

In addition to this, XYZ should also create a framework for breach notification that outlines the steps to be taken in case of any unauthorized access or disclosure of information. The policy should set out procedures for assessing incidents and for informing the relevant authorities as well as affected individuals within a specified timeframe. Finally, XYZ should develop an independent monitoring mechanism to ensure compliance with its privacy policies and procedures. This may include third-party audits, regular evaluation of existing policies, and periodic reviews of employee performance.

By investing in privacy and security controls at both procedural and technical levels, XYZ can ensure that it is able to keep pace with the ever-evolving privacy landscape and provide its customers with the assurance they need.

This will also help the company meet any new regulatory requirements as well as ensure that similar incidents don't reoccur in the future. In this way, XYZ will be able to successfully access and tap into potential markets while reducing legal liabilities associated with data misuse.

The bottom line is that proper investment in privacy and security will yield long-term dividends by enhancing customer trust in the organization. By implementing a comprehensive framework of policies, procedures and technical measures, XYZ can protect personal information from unauthorized access or disclosure, thereby providing increased assurance to customers that their data is safe and secure.

In this way, the company will be better positioned to remain competitive in an increasingly competitive landscape.

#### NEW QUESTION # 81

.....

Our DCPLA test materials boast three versions and they include the PDF version, PC version and the APP online version. The clients can use any electronic equipment on it. If only the users' equipment can link with the internet they can use their equipment to learn our DCPLA qualification test guide. They can use their cellphones, laptops and tablet computers to learn our DCPLA Study Materials. The language is also refined to simplify the large amount of information. So the learners have no obstacles to learn our DCPLA certification guide.
