Nutanix Support has asked an administrator to provide an NCC output, but there is no access to the command line. What should the administrator do to provide the requested NCC output?

- A. Run Health Checks in the Alert Dashboard and enter an email to send it to.
- B. Configure email in Alert Settings and Run Health Checks in the Health Dashboard.
- C. Configure email in Alert Settings and Run Health Checks in the Alert Dashboard.
- D. Run Health Checks in the Event Dashboard.

Answer: C

NEW QUESTION # 19

What role does a Replication Factor of 2 or 3 play in ensuring data integrity and recovery?

- **A. It ensures that multiple copies of data are available for recovery.**
- B. It limits the scope of hardware failures during recovery operations.
- C. It accelerates data transfer to remote backup sites.
- D. It reduces the need for offsite backup solutions.

Answer: A

Explanation:

Replication Factor (RF) defines the number of copies of data stored in a Nutanix cluster. RF2 ensures two copies of data, and RF3 ensures three copies. This redundancy allows the system to maintain data integrity and recoverability even in the event of hardware failures.

* A. It limits the scope of hardware failures during recovery operations: Incorrect, as RF focuses on data replication, not limiting failure scopes.

* B. It ensures that multiple copies of data are available for recovery: Correct, as RF directly relates to data redundancy and recovery capabilities.

* C. It accelerates data transfer to remote backup sites: Incorrect, as RF does not affect remote backup speed.

* D. It reduces the need for offsite backup solutions: Incorrect, as RF works within the cluster, not as a replacement for offsite backups.

NEW QUESTION # 21

How many copies of the metadata are maintained within a Redundancy Factor 3 cluster?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

In a Redundancy Factor 3 (RF3) cluster, 5 copies of the metadata are maintained to ensure data durability and cluster resiliency. RF3 provides fault tolerance against up to two simultaneous failures (e.g., node or disk failures) and requires more metadata copies to achieve this level of protection.

Other redundancy factors:

* RF2 maintains 3 copies of metadata.

* RF3 requires at least 5 metadata copies to protect against additional failures.

NEW QUESTION # 22

Which storage protocol is supported for a datastore when using ESXi as the hypervisor within a Nutanix cluster?

- A. SMB
- B. LVM
- **C. NFS**
- D. iSCSI

Answer: C

Explanation:

When using ESXi as the hypervisor in a Nutanix cluster, the supported storage protocol for a datastore is NFS (Network File System). Nutanix exposes its distributed storage to ESXi hosts using NFS for VM storage.

This protocol is simple to configure and provides high performance and reliability through Nutanix's data services.

Other options:

- * iSCSI: Not typically used for ESXi datastores but can be utilized for specific use cases like external storage connectivity.
- * SMB: Not supported for ESXi datastores.
- * LVM: Logical Volume Management is not used in this context.
