1z0-591 Reliable Exam Question & Minimum 1z0-591 Pass Score

Our 1z0-591 exam cram has been revised for lots of times to ensure all candidates can easily understand all knowledge parts. In the meantime, the learning process is recorded clearly in the system, which helps you adjust your learning plan. On the one hand, our company has benefited a lot from renovation. Customers are more likely to choose our products. On the other hand, the money we have invested is meaningful, which helps to renovate new learning style of the 1z0-591 Exam. So, why not buy our 1z0-591 test guide?

Oracle Business Intelligence Foundation Suite 11g Essentials Sample
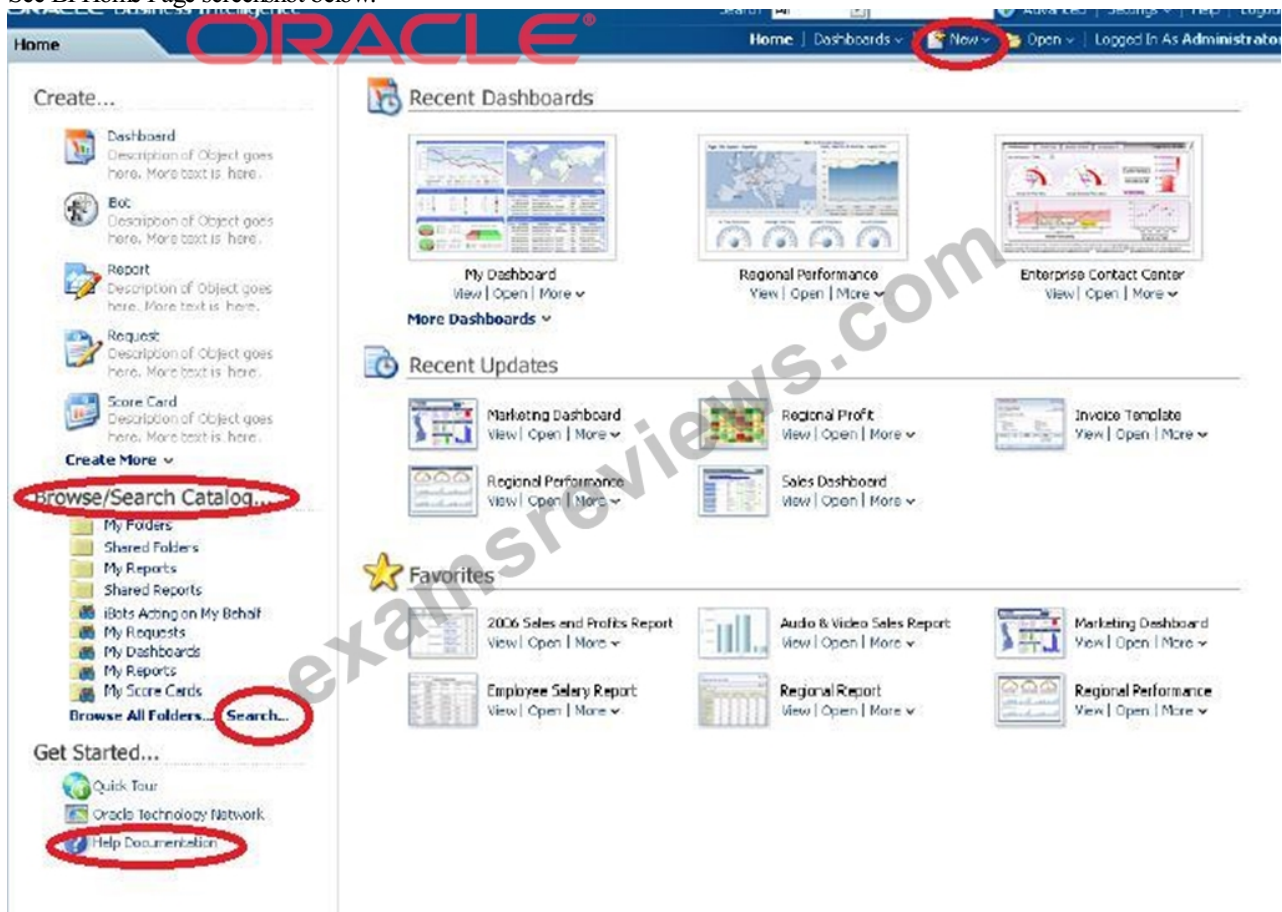

Questions (Q30-Q35):

NEW QUESTION # 30
A user's BI Home page provides one-click access to which three options?

- A. Business model metadata
- B. Oracle BI online documentation
- C. Catalog search functionality
- D. Dashboard layout editor
- E. Create new content

Answer: B,C,E

Explanation:
See BI Home Page screenshot below:

Note: The BI Home page contains the BI content catalog. Fusion Apps will use OBIEE web catalog to store all shipped reporting and analytics content.

From the BI home page users can browse and view the entire BI content. The BI catalog folder structure will match the Fusion Apps main menu structure. Folder structure would be content driven not technology driven which would enable ease of navigation for fusion Apps users.

Following content will be available under the BI catalog structure:

BI Publisher Reports (regardless of data source)

OTBI reports & dashboards

OBIA dashboards & scorecards

Financial Reporting

Also, users can do some additional actions from the BI Home page like: Access personal and shared reports, View/ edit BI publisher report schedules, Launch BI tools for advanced actions and create new reports with report wizard.

New reports created can be saved in BI catalog and added as embedded content within Fusion applications screens or links added to reporting pane. This enables users to extend the prebuilt embedded analytics within Fusion Applications.

NEW QUESTION # 31

Identify the two types of storage for Essbase.

- **A. Aggregate Storage Option and Block Storage Option**
- B. OLAP Storage and Cell Storage
- C. Aggregate Storage and Cell Storage
- D. Aggregate Storage and Hybrid Columnar Compression

Answer: A

Explanation:
Explanation
Oracle Essbase developers creating planning and budgeting applications have been keenly aware of the advantages and disadvantages of the two different storage types available to them:
* Block storage option (BSO) databases support a wide range of calculations, including forecasts, allocations, and aggregations through procedural calculation scripts. The results of these calculations can be written back to the database, but applications that use BSO storage are limited to about 10 dimensions and member counts in the low hundreds of thousands.
* Aggregate storage option (ASO) databases can support about 20 dimensions and member counts in the millions. ASO databases use multidimensional functions rather than procedural scripts to perform calculations, but the results of queries cannot be stored back in the database, making ASO unsuitable for most financial management applications.

NEW QUESTION # 32
What are the two ways to use the administration tool?

- **A. Administrator can use repository and session variables in a repository to streamline administrative tasks and dynamically modify metadata content to adjust to a changing data environment.**
- B. The administration tool uses a set of wizards that support the design of calculations, expressions, dimensions, and so on.
- C. It can be used to manage user password.
- **D. It can be used for versioning of the rpd.**

Answer: A,D

Explanation:
Note: The Administration tool is used to manage OBIEE server and have some capabilities to automate some repetitive tasks and principally his embedded tools.
Oracle Business Intelligence Administration Tool is available only for Windows operating systems.
The Administration Tool is a Windows application that allows the BI Server administrator to create and edit repositories.
Repositories can be edited with the administration tool in either online or offline mode.
The Administration Tool also includes a session manager and a cache manager which are available in online mode. The Cache Manager displays what queries have been cached and how frequently they have been accessed. You can also select and delete items

NEW QUESTION # 33
A customer needs to have a calculation done prior to aggregating the data. How would you accomplish this?

- A. By creating a derived metric by using the Expression Builder
- B. By creating a derived measure by using the Logical Columns available
- **C. By creating a derived measure in the Column Mapping dialog box by using the physical table columns.**
- D. By creating a derived metric by using the Calculation Wizard
- E. By creating a derived measure by using Logic Columns available and changing the aggregation type

Answer: C

Explanation:
Explanation/Reference:
Note 1: OBIEE offers two calculation types for measure in the repository:
logical
physical
You can define calculations in either of the following ways:
* Before the aggregation, in the logical table source.

* After the aggregation, in a logical column derived from two other logical columns. For example: sum(col A) * sum(col B)
Note 2: A measure column is a column unlike the baseline column that has a default aggregation rule defined in the Aggregation tab of the Logical Column dialog in the repository.
Measure columns always calculate the aggregation with which they are defined.
Measures need to be defined in a logical fact. Any column with an aggregation rule is a measure.

NEW QUESTION # 34
When creating Aggregate tables in the OBI repository by using the Aggregate Persistence Wizard, which two statements are true?

- A. The Aggregate Persistence Wizard enables you to automate the creation of physical aggregate tables and their corresponding objects in the repository.
- B. The Extraction Transformation and Loading process creates the aggregate tables.
- C. The analyst must first write DML (Data Manipulation Language) scripts to create the aggregate table.
- D. Job Manager can be used to run the Aggregate Persistence script.

Answer: A,D

Explanation:
B: The Aggregate Persistence Wizard automates the creation and initial population of aggregates, persists them in a back-end database and configures the BI Server metadata layer so that they're used when appropriate.
C: The wizard then shows me a preview of the script it's going to generate, and asks me if I want to create any more summaries. Here's how the preview script looks - note that it's not SQL, it's a script language that the BI Server understands and uses as the specification for an aggregation job, which it then turns into separate CREATE TABLE, INSERT ... SELECT and so on SQL statements, "optimized" for the particular back-end database platform.
Script example:
"ag_Items"
for "Seminar - Complete"."Items"("Quantity")
at levels ("Seminar - Complete"."Customerdim"."State", "Seminar - Complete"."Productdim"."Category",
"Seminar - Complete"."Timedim"."Year")
using connection pool "custdw"."CUSTDW_Pool"
in "custdw".."CUSTDW";

NEW QUESTION # 35
......

In fact, a number of qualifying exams and qualifications will improve your confidence and sense of accomplishment to some extent, so our 1z0-591 learning materials can be your new target. When we get into the job, our 1z0-591 learning materials may bring you a bright career prospect. Companies need employees who can create more value for the company, but your ability to work directly

proves your value. Our 1z0-591 Learning Materials can help you improve your ability to work in the shortest amount of time, thereby surpassing other colleagues in your company, for more promotion opportunities and space for development.
