VMware vSphere Foundation 5.2 Administrator Sample Questions (Q96-Q101):

NEW QUESTION # 96
An administrator needs to configure and manage storage resources and policies to optimize performance of a VCF environment configured with vSAN.
What two steps should the administrator take? (Choose two.)

- A. Decrease the number of disk groups per host to improve performance.
- B. Enable vSphere HA to ensure high availability and resource distribution.
- C. Analyze the current vSAN storage policies and adjust them as needed.
- D. Disable vSAN health alerts to reduce administrative overhead.
- E. Monitor the vSAN performance service for insights into the performance issues.

Answer: C,E

Explanation:
The vSAN performance service provides valuable insights into the storage performance, helping identify potential bottlenecks or areas for improvement.
Analyzing and adjusting vSAN storage policies is crucial for ensuring optimal performance. Policies such as RAID levels, storage encryption, and other settings can be tweaked to better match the environment's performance requirements.

NEW QUESTION # 97
An administrator has been tasked with expanding an existing VMware Cloud Foundation environment by adding a new workload domain. The environment currently has one management domain and one VI workload domain.
What options are available to the administrator for deploying NSX in the second VI workload domain?

- A. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the management domain.
- B. The new workload domain must have a dedicated NSX Fabric.
- C. The new workload domain can have its own dedicated NSX Fabric or it can join the existing NSX Fabric configured in the existing VI domain.
- D. The new workload domain can have a dedicated NSX Fabric or it can join the existing NSX Fabric configured in either the management domain or existing VI domain.

Answer: D

Explanation:
When expanding a VMware Cloud Foundation environment with a new workload domain, you have the flexibility to either configure a dedicated NSX Fabric for the new domain or join an existing NSX Fabric from either the management domain or a previously established VI workload domain. This allows for consistent and scalable network virtualization across multiple domains in the environment.

NEW QUESTION # 98
A disk failure has occurred in a vSAN cluster.
What four steps should be taken to recover from this disk failure? (Choose four.)

- A. Ensure the new disk is claimed by the vSAN cluster
- B. Disable disk group encryption
- C. Rebuild the affected disk group
- D. Perform a full resync of the vSAN objects
- E. Use the vSohere Client to check the vSAN Health Service
- F. Replace the failed disk with a new one

Answer: A,C,E,F

Explanation:
Checking the vSAN Health Service in the vSphere Client is the first step in diagnosing the issue and verifying the status of the vSAN components after the disk failure.
Rebuilding the affected disk group is necessary to ensure that data is re-optimized and replicated in accordance with the vSAN policy.
Replacing the failed disk with a new one ensures that the storage capacity is restored.
Ensuring that the new disk is claimed by the vSAN cluster is important to ensure that it is recognized and integrated into the vSAN disk group.

NEW QUESTION # 99

While deploying a new VMware Cloud Foundation environment, a cloud administrator validates the information entered into the Deployment Parameter Workbook. The validation action results in an error and the VMware Cloud Builder GUI error message does not identify the cause.
Which logfile can the administrator use to identify the cause of the validation error?

- A. VMware SDDC Manager appliance - vcf-deployment-debug.log
- B. VMware Cloud Builder appliance - vcf-deployment-debug.log
- C. VMware SDDC Manager appliance - vcf-bringup-debug.log
- D. VMware Cloud Builder appliance - vcf-bringup-debug.log

Answer: B

Explanation:
The vcf-deployment-debug.log file on the VMware Cloud Builder appliance contains detailed logs related to the deployment process, including any validation errors. This log will help identify the cause of the error during the deployment validation phase.

NEW QUESTION # 100

A specific VM is unable to communicate with other VMs in the same network. An administrator needs to identify and resolve the network connectivity issue.
What three steps should the administrator follow? (Choose three.)

- A. Verify the port group settings and VLAN configuration
- B. Verify that the VM is connected to the correct port group
- C. Use the ESXi command line to check the status of the VM Kernel adapter
- D. Check the network adapter settings in vCenter Server
- E. Restart the VM to reset its network connections

Answer: A,B,D

Explanation:
Port group settings and VLAN configurations need to be correct for VMs to communicate with each other on the same network. Ensuring they are properly configured is essential.
It's important to check that the VM is connected to the correct port group that matches the network configuration of the other VMs.
The network adapter settings in vCenter Server should be reviewed to ensure there are no misconfigurations that could prevent network communication.

NEW QUESTION # 101

......

Our loyal customers give us strong support in the past ten years. Luckily, our 2V0-12.24 learning materials never let them down. Our company is developing so fast and healthy. Up to now, we have made many achievements. Also, the 2V0-12.24 study guide is always popular in the market. All in all, we will keep up with the development of the society. And we always keep updating our 2V0-12.24 Practice Braindumps to the latest for our customers to download. Just buy our 2V0-12.24 exam questions and you will find they are really good!
