

Pass Guaranteed Quiz 2025 ANS-C01: Authoritative AWS Certified Advanced Networking Specialty Exam Reliable Cram Materials

P.S. Free 2025 Amazon ANS-C01 dumps are available on Google Drive shared by TorrentVCE: <https://drive.google.com/open?id=1wZLG31UVM7A8pqW8jzmGgnYUlgmE-FKA>

Since IT certification examinations are difficult, we know many candidates are urgent to obtain valid preparation materials to help them clear exam success. Now we offer the valid ANS-C01 test study guide which is really useful. If you are still hesitating about how to choose valid products while facing so many different kinds of exam materials, here is a chance, our Amazon ANS-C01 Test Study Guide is the best useful materials for people.

Amazon ANS-C01 (AWS Certified Advanced Networking Specialty) Certification Exam is a challenging and rewarding certification for IT professionals who want to specialize in advanced networking solutions on the AWS platform. It validates the skills and knowledge required to design and implement complex networking architectures on AWS and can open up new career opportunities and higher salaries.

The ANS-C01 certification is an excellent way for networking professionals to validate their skills and knowledge of AWS networking services. AWS Certified Advanced Networking Specialty Exam certification provides a competitive edge to individuals seeking to enhance their career prospects in the field of networking. AWS Certified Advanced Networking Specialty Exam certification is recognized globally and is highly valued by employers and organizations seeking to hire networking professionals with AWS expertise.

Perfect ANS-C01 Exam Brain Dumps give you pass-guaranteed Study Materials - TorrentVCE

You can prepare for the AWS Certified Advanced Networking Specialty Exam exam without an internet connection using the offline version of the mock exam. Amazon ANS-C01 practice test not only gives you the opportunity to practice with real exam questions but also provides you with a self-assessment report highlighting your performance in an attempt. TorrentVCE keeps an eye on changes in the Amazon AWS Certified Advanced Networking Specialty Exam exam syllabus and updates Amazon ANS-C01 Exam Dumps accordingly to make sure they are relevant to the latest exam topics. After making the payment for Amazon ANS-C01 dumps questions you'll be able to get free updates for up to 365 days. Another thing you will get from using the ANS-C01 exam study material is free to support. If you encounter any problem while using the ANS-C01 prep material, you have nothing to worry about.

Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

An education agency is preparing for its annual competition between schools. In the competition, students at schools from around the

country solve math problems, complete puzzles, and write essays.

The IP addressing plan of all the schools is well-known and is administered centrally. The competition is hosted in the AWS Cloud and is not publicly available. All competition traffic must be encrypted in transit. Only authorized endpoints can access the competition. All the schools have firewall policies that block ICMP traffic.

A network engineer builds a solution in which all the schools access the competition through AWS Site-to-Site VPN connections.

The network engineer uses BGP as the routing protocol. The network engineer must implement a solution that notifies schools when they lose connectivity and need to take action on their premises to address the issue.

Which combination of steps will meet these requirements MOST cost-effectively? (Choose two.)

- A. Monitor the state of the VPN tunnels by using Amazon CloudWatch. Create a CloudWatch alarm that uses Amazon Simple Notification Service (Amazon SNS) to notify people at the affected school if the tunnels are down.
- B. Create a scheduled AWS Lambda function that uses the VPC Reachability Analyzer API to verify the connectivity. Configure the Lambda function to send an Amazon Simple Notification Service (Amazon SNS) notification to people at the affected school if failure occurs.
- C. Create a scheduled AWS Lambda function that pings each school's on-premises customer gateway device. Configure the Lambda function to send an Amazon Simple Notification Service (Amazon SNS) notification to people at the affected school if the ping fails.
- D. Create a scheduled AWS Lambda function to monitor the existence of each school's routes in the VPC route table where VPN routes are propagated. Configure the Lambda function to send an Amazon Simple Notification Service (Amazon SNS) notification to people at the affected school if failure occurs.
- E. Create an Amazon CloudWatch dashboard for each school to show all CloudWatch metrics for each school's Site-to-Site VPN connection. Share each dashboard with the appropriate school.

Answer: A,B

NEW QUESTION # 52

A financial services company wants to modernize its applications and minimize its data center infrastructure. The company wants to explore a hybrid cloud environment with AWS so that it can start leveraging AWS services for some of its data analytics workflows. The engineering team at the company wants to establish a dedicated, encrypted, low latency, and high throughput connection between its data center and AWS Cloud.

The engineering team has set aside sufficient time to account for the operational overhead of establishing this connection. Which of the following options represents the MOST optimal solution with the LEAST infrastructure set up required for provisioning the end to end connection?

Response:

- A. Use site-to-site VPN to establish a connection between the data center and AWS Cloud
- B. Use AWS Direct Connect to establish a connection between the data center and AWS Cloud
- C. Use AWS Direct Connect along with a site-to-site VPN to establish a connection between the data center and AWS Cloud
- D. Use VPC transit gateway to establish a connection between the data center and AWS Cloud

Answer: C

NEW QUESTION # 53

Your organization's corporate website must be available on `www.acme.com` and `acme.com`. How should you configure Amazon Route 53 to meet this requirement?

Response:

- A. Configure `acme.com` with a CNAME record targeting the ELB. `www.acme.com` with a CNAME record targeting the `acme.com` record.
- B. Configure `acme.com` with an A record targeting the ELB. `www.acme.com` with a CNAME record targeting the `acme.com` record.
- C. Configure `acme.com` using a second ALIAS record with the ELB target. `www.acme.com` using a PTR record with the `acme.com` record target.
- D. Configure `acme.com` with an ALIAS record targeting the ELB. `www.acme.com` with an ALIAS record targeting the ELB.

Answer: D

NEW QUESTION # 54

A company is planning to create a service that requires encryption in transit. The traffic must not be decrypted between the client and the backend of the service. The company will implement the service by using the gRPC protocol over TCP port 443. The service will scale up to thousands of simultaneous connections. The backend of the service will be hosted on an Amazon Elastic Kubernetes Service (Amazon EKS) cluster with the Kubernetes Cluster Autoscaler and the Horizontal Pod Autoscaler configured. The company needs to use mutual TLS for two-way authentication between the client and the backend. Which solution will meet these requirements?

- A. Create a target group. Add the EKS managed node group's Auto Scaling group as a target. Create an Application Load Balancer with an HTTPS listener on port 443 to forward traffic to the target group.
- B. Create a target group. Add the EKS managed node group's Auto Scaling group as a target. Create a Network Load Balancer with a TLS listener on port 443 to forward traffic to the target group.
- **C. Install the AWS Load Balancer Controller for Kubernetes. Using that controller, configure an Application Load Balancer with an HTTPS listener on port 443 to forward traffic to the IP addresses of the backend service Pods.**
- D. Install the AWS Load Balancer Controller for Kubernetes. Using that controller, configure a Network Load Balancer with a TCP listener on port 443 to forward traffic to the IP addresses of the backend service Pods.

Answer: C

Explanation:

<https://docs.aws.amazon.com/elasticloadbalancing/latest/application/load-balancer-target-groups.html#target-group-protocol-version>
<https://docs.aws.amazon.com/prescriptive-guidance/latest/patterns/deploy-a-grpc-based-application-on-an-amazon-eks-cluster-and-access-it-with-an-application-load-balancer.html>

NEW QUESTION # 55

In the "start using the AWS Direct Connect steps," when can you complete the Cross Connect step?

Response:

- **A. After you have received your Letter of Authorization and Connecting Facility Assignment (LOA-CFA) from AWS**
- B. After verifying your virtual interface
- C. 72 hours after submitting your request for AWS Direct Connect Connection
- D. Immediately after submitting your request for AWS Direct Connect Connection

Answer: A

NEW QUESTION # 56
