BTW, DOWNLOAD part of TestPDF 100-140 dumps from Cloud Storage: https://drive.google.com/open?id=1B4-wmWEn1AtXJSN3JHUX35LdtawUOZc_

Once downloaded from the website, you can easily study from the Cisco Certified Support Technician (CCST) IT Support exam questions compiled by our highly experienced professionals as directed by the Cisco 100-140 exam syllabus. The Cisco 100-140 Dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the Cisco Certified Support Technician (CCST) IT Support exam from outdated and unreliable 100-140 study material.

Cisco 100-140 Exam Syllabus Topics:

Topic	Details
Topic 1	Connectivity and Resource Access Issues: This section measures skills of a Network Support Technician and involves assisting users to establish access to network resources, understanding directory services like Active Directory and cloud access management platforms, and managing multifactor authentication. It also includes troubleshooting connectivity problems with peripherals such as printers, scanners, and teleconferencing devices, as well as verifying basic network settings and diagnosing connectivity using various network commands and tools.
Topic 2	Hardware Uses: This domain targets a Desktop Support Technician and focuses on following basic safety procedures related to electrical shock, ESD, and fire hazards. It involves assisting users in locating information about devices including hardware specs and network details using Windows and macOS tools. It covers identifying and understanding various ports and cables, installing and upgrading desktop components like RAM and storage, and troubleshooting common hardware issues while managing driver and firmware updates.
Topic 3	IT Support Job Tasks and Responsibilities: This section of the exam measures skills of an IT Support Specialist and covers foundational help desk concepts such as queue and time management, ticketing systems, service level agreements (SLA), and key performance indicators (KPIs). It includes preparing clear and comprehensive documentation summarizing customer interactions and describes the problem-solving process involving defining issues, collecting information, analyzing causes, implementing solutions, and recording results.

Topic 4	• Job Roles: This section evaluates an IT Support Technician's ability to use remote access tools (such as Remote Desktop, Cisco Webex, and TeamViewer) to assist users and perform support activities. It also includes utilizing troubleshooting tools and resources, such as AI research, search engines, technical forums, and knowledge bases, while being aware of ethical, privacy, and security considerations related to AI and other technologies.
Topic 5	• Operating System and Application Issues: This part targets an Operating System Support Specialist and addresses resolving Windows and macOS issues, such as display settings, updates, permissions, power management, and data backup using cloud tools. It covers troubleshooting mobile device problems on iOS and Android operating systems and provides an understanding of virtualization and cloud concepts including major providers and virtual machines. This section also covers resolving common application issues like installation and security concerns.

2025 Cisco 100-140: Cisco Certified Support Technician (CCST) IT Support Fantastic Exam Fee

TestPDF facilitates you with three different formats of its 100-140 exam study material. These 100-140 exam dumps formats make it comfortable for every Cisco 100-140 test applicant to study according to his objectives. Users can download a free 100-140 demo to evaluate the formats of our 100-140 Practice Exam material before purchasing. Three 100-140 exam questions formats that we have are 100-140 dumps PDF format, web-based 100-140 practice exam and desktop-based 100-140 practice test software.

Cisco Certified Support Technician (CCST) IT Support Sample Questions (Q223-Q228):

NEW QUESTION # 223

Which action should an organization take to reduce the risk of spam emails containing malware?

- **A. Educate employees about the dangers of spam and how to recognize it**
- B. Remove email access from most employees
- C. Allow all emails into the inbox and rely on users to identify spam
- D. Install robust antivirus software on all workstations

Answer: A

Explanation:

Correct Answer. C. Educate employees about the dangers of spam and how to recognize it Educating employees on the risks associated with spam and the best practices for recognizing suspicious emails is an effective way to prevent malware infections originating from spam.

Option A is incorrect as it places unnecessary risk on employees and can lead to security breaches Option B is incorrect because, while antivirus is necessary, it does not prevent spam emails from being received and can only act after the fact Option D is incorrect as it is impractical and inhibitive to business operations to remove email access from most employees

NEW QUESTION # 224

A user in a corporate environment is required to confirm their device's IPv6 address for network configuration purposes. What should the IT support technician advise the user to do on their Windows 10 device?

- **A. Open Command Prompt and type ipconfig**
- B. Go to Control Panel > Network and Sharing Center > Change adapter settings
- C. Navigate to Settings > Network & Internet > Status > Properties
- D. Right-click the network icon in the taskbar and select "Troubleshoot problems"

Answer: A

Explanation:

The `ipconfig` command in Command Prompt quickly provides detailed information on all network adapters, including the IPv6 address. This method is direct and provides comprehensive network configuration details, including IPv6, without navigating through multiple menus.

Option A is incorrect because while it provides some network settings, it does not typically display all detailed IP configuration data directly.

Option C is incorrect because this path leads to adapter settings, which require further navigation to view IPv6 addresses specifically.

Option D is incorrect because "Troubleshoot problems" is intended for resolving network issues and does not directly display network configuration details like IPv6 addresses.

NEW QUESTION # 225

A system administrator needs to check the current IP configuration status of virtual interfaces on a server to troubleshoot connectivity issues.

Which `iproute2` command should they use?

- A. `ip addr list`
- **B. `ip addr`**
- C. `ip route list`
- D. `ip link show type veth`

Answer: B

Explanation:

Correct Answer. C. `ip addr ip addr` is a concise form of the `ip addr show` command and lists all network interfaces and their IP addresses, including virtual interfaces (veth), which is critical for troubleshooting complex network setups.

Option A is incorrect. While sounding plausible, `ip addr list` is not the correct syntax for displaying IP addresses.

Option B is incorrect. `ip link show type veth` specifically lists virtual ethernet interfaces but focuses on link status rather than IP configuration.

Option D is incorrect. `ip route list` displays the routing tables and does not provide direct information about interface IP configurations.

NEW QUESTION # 226

A healthcare organization needs to ensure that their data is stored in compliance with regional regulations.

Which Azure service provides the best solution for compliant, geo-redundant storage?

- A. Azure Site Recovery
- B. Azure SQL Database
- **C. Azure Geo-Redundant Storage (GRS)**
- D. Azure Active Directory

Answer: C

Explanation:

Azure Geo-Redundant Storage (GRS) replicates data to a secondary region far from the primary location, ensuring data durability and compliance with regulations that require geographic redundancy.

Option A is incorrect because Azure Active Directory is a cloud-based identity and access management service, not a data storage solution.

Option B is incorrect as Azure Site Recovery is primarily used for business continuity and disaster recovery, not for data storage compliance.

Option C is incorrect because, while Azure SQL Database provides scalable and secure database services, it does not inherently offer geo-redundancy like GRS.

NEW QUESTION # 227

When troubleshooting network issues on a Mac, a user may need to check their computer's IP address.

Which section in the System Settings should the IT support technician instruct the user to visit to find their IP address?

- A. Internet Accounts
- **B. Network**
- C. Displays
- D. Sharing

Answer: B

Explanation:

Correct Answer: A. Network The Network section in System Settings is the appropriate place to view and manage all network connection settings, including viewing the IP address for any connected network. This area allows users to select from various network interfaces, such as Wi- Fi or Ethernet, and see their respective IP configuration details.

Option B is incorrect because Internet Accounts deals with settings for email, social media, and other accounts, and does not display network configuration details like IP addresses.

Option C is incorrect because Sharing is used to configure settings for file sharing, screen sharing, and other services that allow other devices to connect to the Mac, not for checking the device's own network settings.

Option D is incorrect because Displays manages screen resolution, color profiles, and arrangement of multiple displays, unrelated to network settings.

NEW QUESTION # 228
