Construction-Manager Latest Braindumps Ebook | Valid Test Construction-Manager Bootcamp

We offer free demos and updates if there are any for your reference beside real Construction-Manager real materials. By downloading the free demos you will catch on the basic essences of our Construction-Manager guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. So Construction-Manager Exam Dumps are definitely valuable acquisitions. Wrong practice materials will upset your pace of review, which is undesirable. Only high-class Construction-Manager guide question like us can be your perfect choice.

CMAA Certified Construction Manager (CCM) Sample Questions (Q65-Q70):

NEW QUESTION # 65

While conducting an inspection of the work in progress for a design-bid-build project, a CM notices that some of the completed work does not conform to the construction documents. The FIRST thing the CM should do is

- A. discuss the concerns with the owner.
- **B. document the non-conforming work and distribute the documentation to the contractor, design professional, and client.**
- C. direct the contractor to correct the non-conforming work.
- D. schedule a meeting with the design professionals and the client to discuss the issues.

Answer: B

Explanation:

According to the CMAA Standards of Practice (Chapter 5 - Quality Management), when non-conforming work is observed, the first action the CM must take is to document the condition accurately and notify the appropriate parties. The SOP states:

"When nonconforming work is discovered, the Construction Manager shall document the condition, identify the location and extent, and promptly notify the contractor, the owner, and the design professional." The CM does not have authority to direct corrective work (that authority lies with the owner or design professional). Proper documentation ensures an accurate record and initiates the formal resolution process.

References (CMAA Construction Manager Documents / Study Guide):

CMAA Construction Management Standards of Practice, 2010 Edition, Chapter 5 - Quality Management, Section "Nonconforming Work Identification and Documentation." CMAA CM Study Guide, Quality Management Domain, Objective 5.3: "Identify and document nonconforming work and notify appropriate parties."

NEW QUESTION # 66

Who owns the float in a typical project critical path schedule?

- A. Contractor
- B. Construction manager
- **C. Project**
- D. Owner

Answer: C

Explanation:

According to CMAA Time Management standards, float is defined as the amount of time an activity can be delayed without affecting the overall project completion date. The SOP specifies:

"Float is a shared resource belonging to the project as a whole. It is not owned exclusively by any single party

- owner, contractor, or construction manager."

This principle ensures fair schedule management and prevents disputes. Both the CM and the contractor should work collaboratively to optimize float use for the benefit of the entire project. Contract documents (e.

g., general conditions) may further define float management policies, but unless specified otherwise, float is treated as a project resource, not the property of any one participant.

Therefore, the correct answer is C. Project.

References:

CMAA Construction Management Standards of Practice, 2010 Edition, Chapter 5 - Time Management, Section: "Float Ownership." CMAA CM Study Guide, Time Management Domain, Objective 5.3: "Manage schedule float as a shared project resource."

NEW QUESTION # 67

The CM is tasked with analyzing the schedule variance of a project on a regular basis. The contractor's recent payment application includes a dramatic increase in earned hours than what was budgeted for the project. This MOST likely indicates

- **A. the project is behind schedule.**
- B. the contractor will be submitting change orders.
- C. the project is ahead of schedule.
- D. the contractor is making more profit than anticipated.

Answer: A

Explanation:

In earned value or earned hours analysis, "earned hours" represent how much work has actually been completed (in units of schedule effort) compared to what was budgeted over time. If a contractor claims a significantly higher number of earned hours than budget expected at that point, that discrepancy often indicates the contractor is catching up for prior slippage or back-loading progress and may be masking a delay. In other words, the project is likely behind schedule: the contractor is accelerating or shifting resources to show a jump in performance, sometimes to avoid triggering delay claims or escalating scrutiny.

While CMAA's formal SOP does not provide a one-sentence treatment of this particular scenario, standard earned value (EV) and schedule variance (SV) theory (used in CMAA's time management domain) supports that an unexpected inflation in earned hours relative to budget can signal a retrospective correction for lagging progress, rather than true ahead-of-schedule condition.

NEW QUESTION # 68

Program management includes the early participation of the program manager in developing and making which of the following types

of decisions that become the basis of a capital improvement program?

- A. Staffing
- B. Jurisdictional
- **C. Business**
- D. Safety

Answer: C

Explanation:

According to CMAA's Standards of Practice (Program Management section), the program manager should participate early in the program definition stage by "developing and making the initial strategic, technical and business decisions that define and become the basis for the capital improvement program." Among the options given, business decisions directly match that description. Safety, staffing, and jurisdictional decisions might be part of implementation, but the foundation-setting decisions include business choices (such as scope, funding, investment priorities).

NEW QUESTION # 69

Float, date, and duration are examples of

- A. schedule elements.
- B. logic elements.
- **C. schedule parameters.**
- D. constraints.

Answer: C

Explanation:

According to the CMAA Construction Management Standards of Practice (SOP) under Chapter 4 - Time Management, "schedule parameters" are quantitative data or attributes that define and control the time-based characteristics of project activities.

CMAA identifies parameters such as:

Dates (start and finish)

Durations (planned time to perform an activity)

Float or slack (available time flexibility within the schedule)

These are fundamental "parameters" because they define measurable scheduling characteristics rather than structural logic or relationships. In contrast, "logic elements" refer to the dependencies between activities, and

"constraints" impose limitations or conditions (such as "must finish by" or "start no earlier than").

Therefore, float, date, and duration are examples of schedule parameters.

References (CMAA Documents):

CMAA Construction Management Standards of Practice, 2010 Edition, Chapter 4 - Time Management, Section: "Scheduling Fundamentals." CMAA CM Study Guide, Time Management Domain, Objective 4.2: "Identify schedule elements and parameters."

NEW QUESTION # 70

.....

Compared with the education products of the same type, some users only for college students, some only provide for the use of employees, these limitations to some extent, the product covers group, while our Construction-Manager research material absorbed the lesson, it can satisfy the different study period of different cultural levels of the needs of the audience. For example, if you are a college student, you can study and use online resources through the student column of our Construction-Manager Study Materials, and you can choose to study in your spare time.
