## Answer:

### Explanation:

Check the Explanation for the complete Solution.

### Explanation:

The issue is with Web app 1 (Finance application).

From the WAF logs, we can see that requests to `https://webapp1.comptia.org/FIN/login.html` are being blocked (Rule ID 1006).

The rule is configured to block access to the finance application's login page. This corresponds to the reported issue of the web-based login prompt not loading.

To remediate the issue, the WAF configuration for Rule ID 1006 should be changed from "Block" to "Allow".

This will enable the web-based login prompt to load for the client.

Additionally, the client app configuration indicates that the client laptop (IP 192.168.10.142) is trying to access the service, and the WAF logs show that requests from this IP are being blocked due to the current rule set. Changing the action for Rule ID 1006 will also ensure that legitimate attempts to access the login page from this IP are not blocked.

Steps for remediation:

- \* Go to the WAF configuration.
- \* Find Rule ID 1006 for the Finance application 1.
- \* Change the action from "Block" to "Allow".
- \* Save the changes.

Web application firewall (WAF) configurations typically include rules that define which traffic should be allowed or blocked.

Blocking legitimate traffic to login pages can prevent users from accessing the application, which seems to be the case here.

Client application configurations and WAF logs provide valuable insights into the source of the traffic and the rules that are affecting it. It's important to ensure that the rules align with the intended access policies for the application.

#### NEW QUESTION # 88

An on-premises data center is located in an earthquake-prone location. The workload consists of real-time, online transaction processing. Which of the following data protection strategies should be used to back up on-premises data to the cloud while also being cost effective?

- **A. Remote replication for failover**
- B. A copy that is RAID 1 protected on spinning drives in an on-premises private cloud
- C. Air-gapped protection to provide cyber resiliency
- D. A full backup to on-site tape libraries in a private cloud

**Answer: A**

Explanation:

Remote replication for failover is the data protection strategy that should be used to back up on-premises data to the cloud for an earthquake-prone location. It provides real-time or near-real-time copying of data to a remote location, which can be quickly activated in case the primary site fails.

Reference: Disaster recovery strategies, including remote replication for failover, are part of the cloud-based data protection methods covered in the CompTIA Cloud+ certification.

#### NEW QUESTION # 89

A project manager is taking notes along with gathering feedback about a prior project in order to consider known issues with a project enhancement. Which of the following best describes the plan that the project team is working on?

- A. A plan for capturing issues and conflicts in a project's knowledge base
- B. A plan for addressing and resolving identified issues once the project has been completed
- C. A plan for documenting the outcomes of the project
- **D. A plan for avoiding potential issues that may arise during project execution**

**Answer: D**

Explanation:

The team is leveraging lessons learned to create a preventive plan for avoiding issues in the upcoming project enhancement. This falls under risk management and compliance, ensuring previous failures do not repeat.

#### NEW QUESTION # 90

A systems administrator is configuring backups on a VM and needs the process to run as quickly as possible, reducing the bandwidth on the network during all times from Monday through Saturday. In the event of data corruption, the management team expects the mean time to recovery to be as low as possible. Which of the following backup methods can the administrator use to accomplish these goals?

- A. Incremental backups during off-hours on Monday, Wednesday, and Friday
- **B. Full backup on Sunday and incremental backups on all other days of the week**
- C. Differential backup daily to the cloud
- D. Incremental backup daily to the cloud

**Answer: B**

Explanation:

To achieve a quick backup process and reduce bandwidth use, the administrator should perform a Full backup on Sunday and incremental backups on all other days of the week. This method ensures that only the changes made since the last full backup are copied, reducing the amount of data that needs to be transferred each time, and thus the time and bandwidth required. #### NEW QUESTION # 91

A newly configured VM fails to run application updates despite having internet access. The updates download automatically from a third-party network. Given the following output:

```
$dig +short apac.updateserver.net
38.102.218.7
$dig +short na.updateserver.net
request timeout
```

Which of the following troubleshooting steps would be best to take?

- A. Reconfiguring routing protocols
- B. Running a trace to the router
- C. Testing the IP address configuration
- **D. Checking DNS configurations**

**Answer: D**

Explanation:

The best troubleshooting step to take given the output is to check DNS configurations. The failure to resolve the "na.updateserver.net" domain suggests a DNS resolution issue, which could be due to incorrect DNS settings, a failure in the DNS service, or an issue with the DNS server itself.
