Many of our worthy customers have achieved success not only on the career but also on the life style due to the help of our Esri EAPA_2025 study guide. You can also join them and learn our Esri EAPA_2025 Learning Materials. You will gradually find your positive changes after a period of practices. Then you will finish all your tasks excellently. You will become the lucky guys if there has a chance.

We will definitely not live up to the trust of users in our EAPA_2025 study materials. As you know, the users of our EAPA_2025 exam questions are all over the world. We have also been demanding ourselves with the highest international standards to support our EAPA_2025 training guide in every aspect. First of all, our system is very advanced and will not let your information leak out. It is totally safe to visit our website and buy our EAPA_2025 learning prep. You won't worry anything with our services.

Quiz 2025 Esri Pass-Sure EAPA_2025: ArcGIS Pro Associate 2025 Best Preparation Materials

VCEdumps Esri EAPA_2025 Exam Questions And Answers provide you test preparation information with everything you need. About Esri EAPA_2025 exam, you can find these questions from different web sites or books, but the key is logical and connected. Our questions and answers will not only allow you effortlessly through the exam first time, but also can save your valuable time.

Esri EAPA_2025 Exam Syllabus Topics:

Topic	Details
Topic 1	Automate Workflows: This section of the exam measures skills of GIS Specialist and examines your ability to build and manage models using ModelBuilder, construct geoprocessing workflows, chain together tools, and automate repeatable GIS tasks effectively.
Topic 2	Use Raster and Imagery Data: This section of the exam measures skills of GIS Analyst and tests your ability to work with rasters and imagery including mosaic datasets, raster functions like NDVI, mosaic methods, exporting rasters, and managing raster analysis environments.
Topic 3	Perform Analysis and Query Data: This section of the exam measures skills of GIS Specialist and focuses on applying geoprocessing tools to analyze spatial data, running attribute and spatial queries, using overlays, proximities, summaries, and working with environment settings for automated workflows.
Topic 4	Edit Features and Organize Workflows: This section of the exam measures skills of GIS Analyst and evaluates your competency in editing geospatial features through snapping, templates, sketch tools, performing quality control, and managing simple tasks including map layouts and bookmarks.
Topic 5	Create and Share Maps and Layouts: This section of the exam measures skills of GIS Specialist and includes creating polished maps—designing layouts, inserting elements like scale bars, legends, titles, and sharing outputs via print, PDF, or packages for collaboration.

Esri ArcGIS Pro Associate 2025 Sample Questions (Q70-Q75):

NEW QUESTION # 70

A GIS technician is trying to publish an image service to their organization's portal. The technician needs to ensure service stability when rendering client-side by multiple coworkers at once.

Which capability should the technician specify when publishing?

- A. Processing templates
- B. Maximum item size per request**
- C. Enable the WMS Service capability

Answer: B

Explanation:

Setting the Maximum Item Size Per Request controls how much data can be requested at one time, balancing server load and client-side rendering. Adjusting this value helps ensure stable performance for multiple concurrent users accessing large imagery datasets.

* Processing templates (Option A) define raster function chains but do not control service stability.

* WMS Service capability (Option C) allows publishing as a WMS service but does not directly address client-side stability for image services.

Therefore, the correct answer is B.

-

NEW QUESTION # 71

An organization with many editors needs to know when features have been created and edited, as well as who edited the features. Where should the GIS administrator enable this capability?

- A. The Manage options accessed by right-clicking geodatabase
- B. The Manage options accessed by right-clicking the feature dataset**
- C. The Design options accessed by right-clicking the shapefile

Answer: B

Explanation:

Editor tracking (which records who edited a feature and when) is enabled on individual feature classes or feature datasets in a

geodatabase under the Manage menu. Shapefiles do not support editor tracking.

* The geodatabase (Option A) controls higher-level administrative functions but not editor tracking.

* Shapefiles (Option B) do not support editor tracking.

* The feature dataset (Option C) allows enabling editor tracking for included feature classes.

Therefore, the correct answer is C.

-

NEW QUESTION # 72

A GIS specialist is adding fields to an existing table using the Add Field geoprocessing tool to conduct analysis. The type of analysis requires numeric data that stores information to 4 decimal points.

Which field type and associated precision and scale meets these requirements?

- A. Double - Precision 3, Scale 4
- B. Long - Precision 4, Scale 4
- C. Float - Precision 4, Scale 4

Answer: A

Explanation:

Double field type supports high-precision floating-point numbers suitable for storing data with multiple decimal places. Precision controls the total number of digits; scale controls the number of digits to the right of the decimal.

* Float has lower precision and is not recommended for accurate decimal storage.

* Long is an integer type and cannot store decimals.

* Double with Precision 3 and Scale 4 allows storing up to 4 decimal places as required.

Therefore, the correct answer is B.

-

NEW QUESTION # 73

A GIS analyst is trying to conduct overlay analysis using the Union tool but is unable to run the tool due to a red X in one of the parameters.

- A. The input features do not geometrically intersect.
- B. Both input features are not polygon feature classes.
- C. The environment settings for Processing Extent do not include the participating features.

Answer: C

Explanation:

In ArcGIS Pro, a red X next to a parameter in a geoprocessing tool typically indicates an invalid input due to conflicts with the current environment settings. One of the most common causes is when the Processing Extent environment setting is configured in a way that excludes the actual input features.

The Union tool requires that input features fall within the set extent. If the Processing Extent does not cover any part of one or more input features, they are considered invalid and flagged with a red X, preventing the tool from running.

The software checks whether all input features are accessible within the defined extent. If they are not, this pre-validation error is triggered—even if the inputs are valid in terms of geometry or feature type.

* Option A is incorrect because geometrical intersection is not a requirement for Union to run—it simply overlays features and includes all areas.

* Option C is also incorrect, as the Union tool does indeed require polygon feature classes, but if incorrect feature types are used, a different error (not a red X related to extent) is shown.

This confirms that the red X in this scenario is caused by the Processing Extent settings not including the input features, making the correct answer B.

NEW QUESTION # 74

A GIS analyst has run Ordinary Least Squares (OLS) regression on a dataset for the country of India in order to determine contributing factors to a phenomenon. While the analysis results seem reliable, there is an asterisk on the Koenker statistic in the output report of the OLS.

Which tool does this asterisk suggest the analyst should run next?

- A. Generate Spatial Weights Matrix
- B. Geographically Weighted Regression (GWR)
- C. Generalized Linear Regression (GLR)

Answer: B

Explanation:

The asterisk on the Koenker statistic indicates non-stationarity in the data-meaning that relationships vary across space. In such cases, Geographically Weighted Regression (GWR) should be run to account for spatial variability and better model local relationships.

* Generate Spatial Weights Matrix (Option B) is used for spatial autocorrelation analyses, not regression refinement.

* Generalized Linear Regression (Option C) is a global model and does not address non-stationarity.

Therefore, the correct answer is A.

NEW QUESTION # 75

EAPA_2025 study dumps have a pass rate of 98% to 100% because of the high test hit rate. So our exam materials are not only effective but also useful. If our candidates have other things, time is also very valuable. It is very difficult to take time out to review the EAPA_2025 Exam. But if you use EAPA_2025 exam materials, you will learn very little time and have a high pass rate. Our EAPA_2025 study materials are worthy of your trust.
