Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

Refer to the exhibit. A junior administrator is troubleshooting a FortiManager connectivity issue that is occurring with a managed FortiGate device.

Given the FortiManager device manager settings shown in the exhibit, what can you conclude from this scenario?

FortiManager Managed FortiGate devices

- A. The administrator recently restored a FortiManager configuration file.
- B. The administrator can reclaim the FortiGate to FortiManager protocol (FGFM) tunnel to get the device online.
- C. The administrator must refresh the device to restore connectivity.
- D. FortiManager lost internet connectivity, therefore, the device appears to be down.

Answer: A

Explanation:

FMG is in offline mode, which is activated after restoring a configuration file.

NEW QUESTION # 16

You are moving managed FortiGate devices from one ADOM to a new ADOM.

Which statement correctly describes the expected result?

- A. Policy packages will be imported into the new ADOM automatically.
- B. The shared device settings will be installed automatically.
- C. The shared policy package will not be moved to the new ADOM automatically.
- D. Any unused objects from a previous ADOM are moved to the new ADOM automatically.

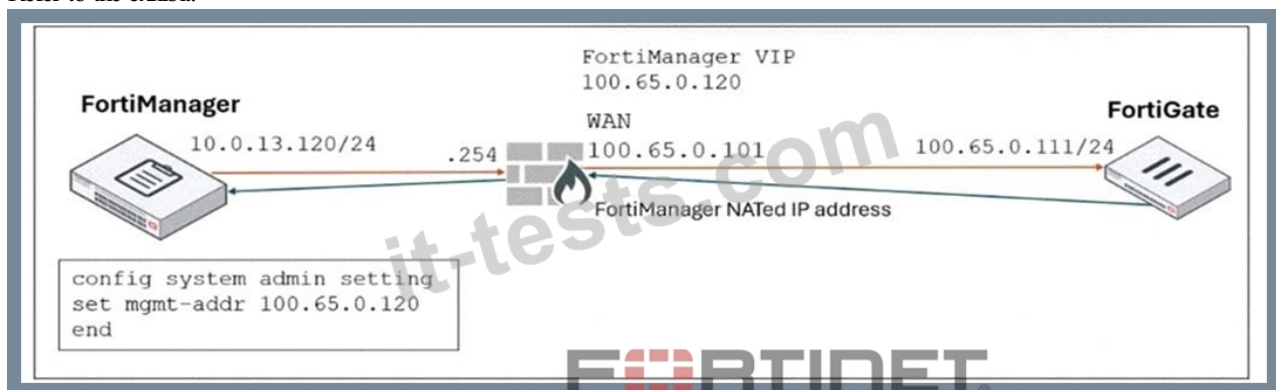

Answer: C

Explanation:

When you move devices from one ADOM to another ADOM, shared policy packages and objects do not move to the new ADOM. You will need to import policy packages from managed devices.

NEW QUESTION # 17

Refer to the exhibit.

FortiManager is operating behind a network address translation (NAT) device, and the administrator configured the FortiManager NATed IP address under the FortiManager system administration settings.

What is the expected result during discovery?

- A. FortiManager sets both the 100.65.0.120 IP address and 10.0.13.120 IP address on FortiGate.
- B. FortiManager sets the 100.65.0.101 IP address on FortiGate.
- **C. FortiManager sets the 100.65.0.120 IP address on FortiGate.**
- D. FortiManager sets both the 100.65.0.120 IP address and 100.65.0.101 IP address on FortiGate.

Answer: C

Explanation:

When FortiManager is behind a NAT device, setting the NATed IP address (100.65.0.120) in the system admin settings causes FortiManager to use that NATed IP address for communication and configuration with FortiGate during discovery and management operations.

NEW QUESTION # 18

An administrator has assigned a global policy package to a new ADOM named ADOM1.

What will happen if the administrator tries to create a new policy package in ADOM1?

- A. The administrator will have to assign the global policy package from the global ADOM.
- B. FortiManager will automatically assign the global policy package to the new policy package.
- **C. The administrator will be able to select the option to assign the global policy package to the new policy package.**
- D. FortiManager will automatically install policies on the policy package in ADOM1.

Answer: C

Explanation:

When a global policy package is assigned to an ADOM, administrators creating new policy packages within that ADOM have the option to select and assign the global policy package to the new policy package if desired.

An administrator has created a firewall address object that is used in multiple policy packages for multiple FortiGate devices in an ADOM.

After the installation operation is performed, which IP/netmask will be installed on Remote-Firewall [VDOM1] for the LAN firewall address object?

- A. 172.16.5.0/255.255.255.0
- B. 21.21.2.5/255.255.255.255
- C. 172.16.5.20/255.255.255.255
- D. 10.10.10.5/255.255.255.255

Answer: B

Explanation:

The per-device mapping overrides the global IP/netmask setting for the firewall address object. For the device "Remote-Firewall," the mapped IP/netmask is 21.21.2.5/255.255.255.255, so this value will be installed on Remote-Firewall [VDM1].
