

Pass Guaranteed Quiz 2025 GitHub-Advanced-Security: Trustable GitHub Advanced Security GHAS Exam New Dumps Book

2025 Latest PassExamDumps GitHub-Advanced-Security PDF Dumps and GitHub-Advanced-Security Exam Engine Free Share: https://drive.google.com/open?id=1jEWo-sohiKF8lfDlhiRlw_EHuiVKuiJ

Our to-the-point and trustworthy GitHub GitHub Advanced Security GHAS Exam Exam Questions in three formats for the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) certification exam will surely assist you to qualify for GitHub GitHub-Advanced-Security certification. Do not underestimate the value of our GitHub GitHub-Advanced-Security Exam Dumps because it is the make-or-break point of your career. Therefore, make the most of this opportunity of getting these superb exam questions for the Financials in GitHub GitHub-Advanced-Security certification exam.

GitHub GitHub-Advanced-Security certification exam is a high demand exam tests in IT field because it proves your ability and professional technology. To get the authoritative certification, you need to overcome the difficulty of GitHub-Advanced-Security Test Questions and complete the actual test perfectly. Our training materials contain the latest exam questions and valid GitHub-Advanced-Security exam answers for the exam preparation, which will ensure you clear exam 100%.

Pass GitHub-Advanced-Security Exam with Valid GitHub-Advanced-Security New Dumps Book by PassExamDumps

Everybody should recognize the valuable of our life; we can't waste our time, so you need a good way to help you get your goals straightly. Of course, our GitHub-Advanced-Security latest exam torrents are your best choice. I promise you that you can learn from the GitHub-Advanced-Security Exam Questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately. Now, you can free download the demo of our GitHub-Advanced-Security test torrent to have a check on our wonderful quality.

GitHub GitHub-Advanced-Security Exam Syllabus Topics:

Topic	Details
Topic 1	Use code scanning with CodeQL: This section of the exam measures skills of a DevSecOps Engineer and covers working with CodeQL to write or customize queries for deeper semantic analysis. Candidates should demonstrate how to configure CodeQL workflows, understand query suites, and interpret CodeQL alerts to uncover complex code issues beyond standard static analysis.
Topic 2	Describe the GHAS security features and functionality: This section of the exam measures skills of a GitHub Administrator and covers identifying and explaining the built-in security capabilities that GitHub Advanced Security provides. Candidates should be able to articulate how features such as code scanning, secret scanning, and dependency management integrate into GitHub repositories and workflows to enhance overall code safety.
Topic 3	Configure GitHub Advanced Security tools in GitHub Enterprise: This section of the exam measures skills of a GitHub Administrator and covers integrating GHAS features into GitHub Enterprise Server or Cloud environments. Examinees must know how to enable advanced security at the enterprise level, manage licensing, and ensure that scanning and alerting services operate correctly across multiple repositories and organizational units.

GitHub Advanced Security GHAS Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

As a repository owner, you want to receive specific notifications, including security alerts, for an individual repository. Which repository notification setting should you use?

- A. All Activity
- B. Participating and @mentions
- C. Ignore
- D. Custom

Answer: D

Explanation:

Using the Custom setting allows you to subscribe to specific event types, such as Dependabot alerts or vulnerability notifications, without being overwhelmed by all repository activity. This is essential for repository maintainers who need fine-grained control over what kinds of events trigger notifications.

This setting is configurable per repository and allows users to stay aware of critical issues while minimizing notification noise.

NEW QUESTION # 73

A repository's dependency graph includes:

- A. A summary of the dependencies used in your organization's repositories.
- B. Dependencies from all your repositories.
- C. Dependencies parsed from a repository's manifest and lock files.
- D. Annotated code scanning alerts from your repository's dependencies.

Answer: C

Explanation:

The dependency graph in a repository is built by parsing manifest and lock files (like package.json, pom.xml, requirements.txt). It helps GitHub detect dependencies and cross-reference them with known vulnerability databases for alerting.

It is specific to each repository and does not show org-wide or cross-repo summaries.

NEW QUESTION # 74

A dependency has a known vulnerability. What does the warning message include?

- A. A brief description of the vulnerability

- B. The security impact of these changes
- C. An easily understandable visualization of dependency change
- D. How many projects use these components

Answer: A

Explanation:

When a vulnerability is detected, GitHub shows a warning that includes a brief description of the vulnerability. This typically covers the name of the CVE (if available), a short summary of the issue, severity level, and potential impact. The message also links to additional advisory data from the GitHub Advisory Database.

This helps developers understand the context and urgency of the vulnerability before applying the fix.

NEW QUESTION # 75

Which of the following is the best way to prevent developers from adding secrets to the repository?

- **A. Enable push protection**
- B. Make the repository public
- C. Configure a security manager
- D. Create a CODEOWNERS file

Answer: A

Explanation:

The best proactive control is push protection. It scans for secrets during a git push and blocks the commit before it enters the repository.

Other options (like CODEOWNERS or security managers) help with oversight but do not prevent secret leaks.

Making a repo public would increase the risk, not reduce it.

NEW QUESTION # 76

You are managing code scanning alerts for your repository. You receive an alert highlighting a problem with data flow. What do you click for additional context on the alert?

- A. Security
- B. Code scanning alerts
- **C. Show paths**

Answer: C

Explanation:

When dealing with a data flow issue in a code scanning alert, clicking on "Show paths" provides a detailed view of the data's journey through the code. This includes the source of the data, the path it takes, and where it ends up (the sink). This information is crucial for understanding how untrusted data might reach sensitive parts of your application and helps in identifying where to implement proper validation or sanitization.

NEW QUESTION # 77

.....

Do you want to gain all these GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) certification exam benefits? Looking for the quick and complete GitHub-Advanced-Security exam dumps preparation way that enables you to pass the GitHub-Advanced-Security certification exam with good scores? If your answer is yes then you are at the right place and you do not need to go anywhere. Just download the PassExamDumps GitHub-Advanced-Security Questions and start GitHub-Advanced-Security exam preparation without wasting further time.
