Pass Guaranteed Quiz First-grade Cisco - 200-901 - DevNet Associate Exam Exam Quiz

Our evaluation system for 200-901 test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our 200-901 test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the 200-901 Exam Torrent. If you encounter something you do not understand, in the process of learning our 200-901 exam torrent, you can ask our staff. We provide you with 24-hour online services to help you solve the problem. Therefore we can ensure that we will provide you with efficient services.

Cisco DevNet Associate Exam Sample Questions (Q378-Q383):

NEW QUESTION # 378

Which RFC 1918 address space includes a subnet of 172.16.0.0 that uses a mask of 255.255.0.0?

- A. class D
- B. class C
- C. class A
- **D. class B**

Answer: D

NEW QUESTION # 379

Which YANG statement defines a block of other statements that can be easily referenced in other areas of a data model?

- A. container
- B. grouping
- **C. module**
- D. submodule

Answer: C

Explanation:

module: A YANG module defines a hierarchy of nodes that can be used for NETCONF-based operations.

With its definitions and the definitions it imports or includes from elsewhere, a module is self-contained and "compilable".

<https://tools.ietf.org/html/rfc6020>

NEW QUESTION # 380

Refer to the exhibit.

```
url = 'https://api.amp.cisco.com/v1/computers'
response = session.get (url)
response_json = response.json ()

for item in response_json ['data'] :
    print (item['connector_guid'], item['hostname'])

while 'next' in response_json['metadata'] ['links']:
    
    response = session.get (next_url)
    response_json = response.json()
    for item in response_json['data']:
        print(item['connector_guid'], item['hostname'])
```

An engineer sends the request to collect data over Cisco AMP for Endpoints API. The Engineer must list guide and hostname data for all computers, but the first request returns only 500 items out of 2,000. Then, the engineer adds the loop to collect all the data. What must be added to the script where the code is missing to complete the requests?

- A. `next_url = response_json ['metadata'] ['links'] ['next']`
- B. `next_url = response_json ['metadata'] ['next']`
- C. `next_url = response_json ['next']`
- D. `next_url = response_json ['metadata'] ['links']`

- A. Option D
- B. Option C
- C. Option B
- **D. Option A**

Answer: D

Explanation:

To complete the requests and retrieve all the data, the correct code that needs to be added is `next_url = response_json['metadata']['links']['next']`. This ensures that the script retrieves the URL for the next set of data from the 'links' object within the 'metadata' section of the JSON response. This allows the loop to continue until all data is collected.

NEW QUESTION # 381

A 401 HTTP response code is returned when calling a REST API. What is the error state identified by this response code?

- A. The server cannot process the request as it has detected an issue in the request syntax or body.
- B. The server accepted the request but the client is not authorized for this content.
- C. The server cannot find the requested resource because the path specified is incorrect.
- **D. The request has not been accepted because it requires authentication.**

Answer: D

Explanation:

Reference:

<https://blog.restcase.com/rest-api-error-codes-101/#:~:text=A%20401%20error%20response%20indicates,creden A 401>

Unauthorized status code indicates that the request has not been processed because it lacks valid authentication credentials for the target resource. The client must authenticate itself to get the requested response. This often involves providing the correct API key, token, or login credentials.

NEW QUESTION # 382

Which action does the Git command `git merge` allow the development to perform?

- A. Create, list, rename, and delete branches
- B. Switch between branches
- **C. Combine multiple sequences of commits into one unified history**
- D. Push changes to the remote repository

Answer: C

Explanation:

Git merge will combine multiple sequences of commits into one unified history. In the most frequent use cases, `git merge` is used to combine two branches.
