As long as you study with our H13-321\_V2.5 training braindump, then you will find that it is designed to deepened the understanding of the users and memory. Simple text messages, deserve to go up colorful stories and pictures beauty, make the H13-321\_V2.5 test guide better meet the zero basis for beginners, let them in the relaxed happy atmosphere to learn more useful knowledge, more good combined with practical, so as to achieve the state of unity. It is easy to pass with our H13-321\_V2.5 Practice Questions as our pass rate of H13-321\_V2.5 exam material is more than 98%.

In order to make life better, attending Huawei certification examinations will be the best choice for every IT workers. Passing H13-321\_V2.5 exam and obtaining a certification help candidates get salary raise and position promotion opportunities. It will be a fast and convenient road to success for the certification with our Huawei H13-321\_V2.5 Practice Test Engine. As for our guaranteed pass policy, our products are too good a change to miss for ambitious people.

>> Latest H13-321\_V2.5 Exam Materials <<

## H13-321\_V2.5 Test Fee - Pass H13-321\_V2.5 Guaranteed

To help people pass exam easily, we bring you the latest H13-321\_V2.5 exam prep for the actual test which enable you get high

passing score easily in test. Our study materials are the up-to-date and all H13-321\_V2.5 Test Answers you practiced are tested by our professional experts. Once you have well prepared with our H13-321\_V2.5 dumps collection, you will go through the formal test without any difficulty.

## Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q40-Q45):

### NEW QUESTION # 40

Seq2Seq is a model that translates one sequence into another sequence, essentially consisting of two recurrent neural networks (RNNs), one is the Encoder, and the other is the ----- . (Fill in the blank.)

**Answer:**

Explanation:

Decoder

Explanation:

The Seq2Seq architecture is widely used in machine translation, speech recognition, and other NLP tasks. It consists of:

- \* Encoder: Processes the input sequence and encodes it into a fixed-length context vector containing semantic information.
- \* Decoder: Uses this context vector to generate the target output sequence step by step.

Exact Extract from HCIP-AI EI Developer V2.5:

"Seq2Seq models consist of an encoder and a decoder. The encoder transforms the input into a context vector, which the decoder uses to generate the output sequence." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Encoder-Decoder Architecture

### NEW QUESTION # 41

A text classification task has only one final output, while a sequence labeling task has an output in each input position.

- A. TRUE
- B. FALSE

**Answer: A**

Explanation:

In NLP:

\* Text classification (e.g., sentiment analysis) predicts a single label for the entire input sequence.

\* Sequence labeling (e.g., Named Entity Recognition, Part-of-Speech tagging) produces an output label for each token or position in the input sequence. This distinction is important for selecting appropriate model architectures and loss functions.

Exact Extract from HCIP-AI EI Developer V2.5:

"Text classification assigns one label to the whole text, whereas sequence labeling assigns a label to each token in the sequence."

Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: NLP Task Categories

### NEW QUESTION # 42

Which of the following statements are true about the differences between using convolutional neural networks (CNNs) in text tasks and image tasks?

- A. For CNN, there is no difference in handling text or image tasks.
- B. Color image input is multi-channel, whereas text input is single-channel.
- C. CNNs are suitable for image tasks, but they perform poorly in text tasks.
- D. When the CNN is used for text tasks, the kernel size must be the same as the number of word vector dimensions. This constraint, however, does not apply to image tasks.

**Answer: B,D**

Explanation:

In CNN usage:

\* A: True - color images have multiple channels (e.g., RGB = 3), while text inputs are represented as sequences of word embeddings, typically single-channel in structure.

\* B: True - in text tasks, the convolution kernel height must match the embedding dimension to capture complete token information, which is not a constraint in images.

\* C: False - there are clear differences in handling between text and image data.

\* D:False - CNNs can perform very well in text classification when used appropriately.

Exact Extract from HCIP-AI EI Developer V2.5:

"In text CNNs, convolution kernels span the entire embedding dimension, whereas in image CNNs, kernel size is independent of channel count." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: CNN in NLP

#### NEW QUESTION # 43

When the chi-square test is used for feature selection, SelectKBest and \_\_\_\_\_ function or class must be imported from the sklearn.feature\_selection module. (Enter the function interface name.) chi2 Explanation:

In feature selection for classification tasks, the chi-square ( $\chi^2$ ) statistical test can be applied to evaluate the independence between features and target labels.

In Python's scikit-learn library, this is implemented using:

**Answer:**

Explanation:

python

CopyEdit

```
from sklearn.feature_selection import SelectKBest, chi2
```

SelectKBest selects the top K features based on scores returned by the chi2 function.

Exact Extract from HCIP-AI EI Developer V2.5:

"In scikit-learn, SelectKBest with chi2 can be used for feature selection by scoring features according to the chi-square statistic."

Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Feature Selection Methods

#### NEW QUESTION # 44

Which of the following ModelArts training parameters is used to customize hyperparameters?

- A. Resource Pool
- B. Algorithm Type
- **C. Hyperparameter**
- D. Compute Nodes

**Answer: C**

Explanation:

In Huawei Cloud ModelArts training jobs, the Hyperparameter parameter is explicitly designed to allow users to define custom training settings, such as learning rate, batch size, and number of epochs.

\* Algorithm Type specifies the model algorithm.

\* Resource Pool selects the computational environment.

\* Compute Nodes determines the number of nodes used for training.

Exact Extract from HCIP-AI EI Developer V2.5:

"The Hyperparameter field in ModelArts allows users to define and pass custom training parameters to the algorithm for tuning performance." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts Training Job Parameters

#### NEW QUESTION # 45

.....

Our PDF version of our H13-321\_V2.5 exam practice guide is convenient for the clients to read and supports the printing. If the clients use our PDF version they can read the PDF form conveniently and take notes. The H13-321\_V2.5 quiz prep can be printed onto the papers. If the clients need to take note of the important information they need they can write them on the papers to be convenient for reading or print them on the papers. The clients can read our H13-321\_V2.5 Study Materials in the form of PDF or on the printed papers. Thus the clients learn at any time and in any place and practice the H13-321\_V2.5 exam practice guide repeatedly.
