Customizable GH-200 Exam Mode - GH-200 PDF Dumps Files

Our company is a professional certificate exam materials provider. We have occupied in the field for years, therefore we have rich experiences. GH-200 learning materials of us are high-quality, and we receive many good feedbacks from our customers, and they think highly of the GH-200 Exam Dumps. In order to serve you better, we have online and offline chat service, you can ask any questions about the GH-200 learning materials. Besides, we provide you with free update for one year after purchasing.

Microsoft GH-200 Exam Syllabus Topics:

Topic	Details

Topic 1	• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.
Topic 2	• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.
Topic 3	• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.
Topic 4	• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.

Microsoft GitHub Actions Sample Questions (Q40-Q45):

NEW QUESTION # 40
Which workflow command would output the debug message "action successfully debugged"?

- A. echo "::debug::action successfully debugged"
- B. echo "::debug:action successfully debugged:"
- C. echo :debug::message=action successfully debugged"
- D. echo "debug-action successfully debugged"

Answer: A

Explanation:
The ::debug:: syntax is used to output debug messages in GitHub Actions workflows. This command will print the message "action successfully debugged" in the debug logs when the workflow runs.

NEW QUESTION # 41
Which of the following scenarios would require the use of self-hosted runners instead of GitHub-hosted runners?

- A. exceeding 50,000 monthly minutes of build time
- B. performing builds on macOS
- C. using specialized hardware configurations required for workflows
- D. using Docker containers as part of the workflow
- E. running more than the three concurrent workflows supported by GitHub-hosted runners

Answer: C,E

Explanation:
GitHub-hosted runners have a limit on the number of concurrent workflows (typically 20 for free-tier accounts and 5 for enterprise). If your organization needs to run more workflows simultaneously, you would need to use self-hosted runners to increase the available concurrency.

Self-hosted runners allow you to configure specialized hardware or software setups that are necessary for certain workflows. GitHub-hosted runners may not have access to custom hardware configurations like GPUs or other specialized resources, so self-hosted runners are required in such cases.

NEW QUESTION # 42

While awaiting approval, how many days can a workflow be in the "Waiting" state before it automatically fails?

- A. 30 days
- B. 7 days
- C. 60 days
- D. 14 days

Answer: A

Explanation:
Using required reviews in workflows
Jobs that reference an environment configured with required reviewers will wait for an approval before starting. While a job is awaiting approval, it has a status of "Waiting". If a job is not approved within 30 days, it will automatically fail.
Reference:
https://docs.github.com/en/actions/how-tos/deploy/configure-and-manage-deployments/control- deployments

NEW QUESTION # 43

When reviewing an action for use, what file defines its available inputs and outputs?

- A. workflow.yml
- B. inputs.yml
- C. config.json
- D. defaults.json
- E. action.yml

Answer: E

Explanation:
The action.yml file defines the inputs and outputs for a GitHub Action. This file contains metadata about the action, including the required inputs and outputs, as well as other configurations like the action's description, runs, and environment setup.

NEW QUESTION # 44

You need to make a script to retrieve workflow run logs via the API. Which is the correct API to download a workflow run log?

- A. POST /repos/:owner/:repo/actions/runs/:run_id/logs
- B. GET /repos/:owner/:repo/actions/artifacts/logs
- C. GET /repos/:owner/:repo/actions/runs/:run_id/logs
- D. POST /repos/:owner/:repo/actions/runs/:run_id

Answer: C

Explanation:
REST API endpoints for workflow jobs
You can use the REST API to view logs and workflow jobs in GitHub Actions.
Download job logs for a workflow run
Gets a redirect URL to download a plain text file of logs for a workflow job.
Code samples for "Download job logs for a workflow run"
Request example
Get /repos/{owner}/{repo}/actions/jobs/{job_id}/logs
