212-82 Top Exam Dumps & 212-82 Exam Registration

Our 212-82 exam materials are famous among candidates. Once they need to prepare an exam, our 212-82 study materials are their first choice. As you know, it is troublesome to get the 212-82 certificate. Now, you are fortunate enough to come across our 212-82 Exam Guide. We have free demos on the website for our customers to download if you still doubt our products, and you can check whether it is the right one for you before purchase as well.

ECCouncil 212-82 certification exam is recognized globally as a benchmark for cybersecurity knowledge and skills. Certified Cybersecurity Technician certification is highly respected in the industry and is a requirement for many cybersecurity job roles. 212-82 Exam is designed to test the candidate's proficiency in cybersecurity concepts and techniques, and to ensure that they have a strong foundation in the field.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q119-Q124):

NEW QUESTION # 119

A text file containing sensitive information about the organization has been leaked and modified to bring down the reputation of the organization. As a safety measure, the organization did contain the MD5 hash of the original file. The file which has been leaked is retained for examining the integrity. A file named "Sensitiveinfo.txt" along with OriginalFileHash.txt has been stored in a folder named Hash in Documents of Attacker Machine-1. Compare the hash value of the original file with the leaked file and state whether the file has been modified or not by selecting yes or no.

- A. Yes
- B. No

Answer: A

NEW QUESTION # 120

Zion belongs to a category of employees who are responsible for implementing and managing the physical security equipment installed around the facility. He was instructed by the management to check the functionality of equipment related to physical security. Identify the designation of Zion.

- A. Guard
- B. Chief information security officer
- C. Supervisor
- D. Safety officer

Answer: A

Explanation:

The correct answer is C, as it identifies the designation of Zion. A guard is a person who is responsible for implementing and managing the physical security equipment installed around the facility. A guard typically performs tasks such as:

- * Checking the functionality of equipment related to physical security
- * Monitoring the surveillance cameras and alarms
- * Controlling the access to restricted areas
- * Responding to emergencies or incidents

In the above scenario, Zion belongs to this category of employees who are responsible for implementing and managing the physical security equipment installed around the facility. Option A is incorrect, as it does not identify the designation of Zion. A supervisor is a person who is responsible for overseeing and directing the work of other employees. A supervisor typically performs tasks such as:

- * Assigning tasks and responsibilities to employees
- * Evaluating the performance and productivity of employees
- * Providing feedback and guidance to employees
- * Resolving conflicts or issues among employees

In the above scenario, Zion does not belong to this category of employees who are responsible for overseeing and directing the work of other employees. Option B is incorrect, as it does not identify the designation of Zion. A chief information security officer (CISO) is a person who is responsible for establishing and maintaining the security vision, strategy, and program for an organization. A CISO typically performs tasks such as:

- * Developing and implementing security policies and standards
- * Managing security risks and compliance
- * Leading security teams and projects
- * Communicating with senior management and stakeholders

In the above scenario, Zion does not belong to this category of employees who are responsible for establishing and maintaining the security vision, strategy, and program for an organization. Option D is incorrect, as it does not identify the designation of Zion. A safety officer is a person who is responsible for ensuring that health and safety regulations are followed in an organization. A safety officer typically performs tasks such as:

- * Conducting safety inspections and audits
- * Identifying and eliminating hazards and risks
- * Providing safety training and awareness
- * Reporting and investigating accidents or incidents

In the above scenario, Zion does not belong to this category of employees who are responsible for ensuring that health and safety regulations are followed in an organization. References: Section 7.1

NEW QUESTION # 121

ProNet, a leading technology firm, has been dynamically evolving its internal infrastructure to cater to an expanding workforce and changing business needs. The company's current project involves enhancing the overall security of its internal platforms. The company's security team is focusing on a robust access control system. To make the system efficient, it needs to implement a model that would define access based on roles within the organization, where specific roles would have predefined access to certain resources, and the roles can be assigned to multiple users. The aim is to decrease the administrative work involved in assigning permissions and ensure that users gain only the necessary permissions in line with their job functions. Which access control model best suits ProNet's requirement?

- A. Discretionary Access Control (DAC)
- **B. Role-Based Access Control (RBAC)**
- C. Attribute-Based Access Control (ABAC)
- D. Mandatory Access Control (MAC)

Answer: B

NEW QUESTION # 122

Perform vulnerability analysis of a web application, www.luxurytreats.com and determine the name of the alert with WASC ID 9. (Practical Question)

- A. Absence of Anti-CSRF Tokens
- B. X-Frame-Options Header Not Set
- **C. Application Error Disclosure**
- D. Viewstate without MAC Signature

Answer: C

Explanation:

Performing a vulnerability analysis on a web application involves identifying specific security weaknesses. In this case, the WASC ID 9 refers to "Application Error Disclosure."

* Vulnerability Description:

* Application Error Disclosure: This vulnerability occurs when a web application reveals too much information about internal errors, potentially aiding attackers in crafting specific attacks against the system.

* Detection and Mitigation:

* Error Handling: Ensure that error messages do not expose sensitive information and provide only necessary details to the end-user.

* Logging: Detailed error information should be logged securely for internal review without being exposed to users.

References:

* OWASP Top Ten Web Application Security Risks: OWASP

* WASC Threat Classification: WASC ID 9

NEW QUESTION # 123

Nicolas, a computer science student, decided to create a guest OS on his laptop for different lab operations. He adopted a virtualization approach in which the guest OS will not be aware that it is running in a virtualized environment. The virtual machine manager (VMM) will directly interact with the computer hardware, translate commands to binary instructions, and forward them to the host OS.

Which of the following virtualization approaches has Nicolas adopted in the above scenario?

- **A. Hardware-assisted virtualization**
- B. OS-assisted virtualization
- C. Full virtualization
- D. Hybrid virtualization

Answer: A

Explanation:

Hardware-assisted virtualization is a virtualization approach in which the guest OS will not be aware that it is running in a virtualized environment. The virtual machine manager (VMM) will directly interact with the computer hardware, translate commands to binary instructions, and forward them to the host OS. Hardware-assisted virtualization relies on special hardware features in the CPU and chipset to create and manage virtual machines efficiently and securely. Full virtualization is a virtualization approach in which the guest OS will not be aware that it is running in a virtualized environment, but the VMM will run in software and emulate all the hardware resources for each virtual machine. Hybrid virtualization is a virtualization approach that combines hardware-assisted and full virtualization techniques to optimize performance and compatibility.

OS-assisted virtualization is a virtualization approach in which the guest OS will be modified to run in a virtualized environment and cooperate with the VMM to access the hardware resources.
