UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q27-Q32):

NEW QUESTION # 27
Why is it important to gather and analyze data about the languages in scope?

- A. This is a standard check but has no actual effect on the Document Understanding process.
- B. The main reason is that all taxonomy fields should have their names translated into all the languages presented in the

documents to be processed.
- C. Different Document Understanding components have support for different languages, so they have to be selected according to the requirements.
- D. If an ML (Machine Learning) extractor is used, the model schema fields should be renamed according to the most frequently used language from the documents to be processed

Answer: C

Explanation:
It is essential to analyze the languages involved in a project because different components of UiPath's Document Understanding framework have varying language support. For instance, some OCR engines and classifiers support specific languages, and this determines whether a particular language can be processed accurately. As the supported languages differ across components such as the Machine Learning Extractor, Form Extractor, and various OCR services, selecting the right components is crucial to meeting project requirements

NEW QUESTION # 28
What is the Machine Learning Extractor?

- A. A tool that helps extract data from different document structures, and is particularly useful when the same document has multiple formats.
- B. A specialized model that can recognize multiple languages in the same document using API calls to a Hugging Face model with over 250 languages.
- C. An extraction model that can be enabled and trained in Al Center. For better accuracy. 25 documents per model are recommended to train the model.
- D. A tool using machine learning models to identify and report on data targeted for data extraction.

Answer: A

Explanation:
The Machine Learning Extractor utilizes machine learning models to effectively extract data from documents, especially when dealing with varying structures or formats within the same document type. This capability is crucial in scenarios where documents do not follow a strict template and have variations in their layout or content organization. The extractor can be trained to understand these variations and accurately extract the needed information.
The Machine Learning Extractor is a data extraction tool that uses machine learning models to extract data from various types of documents, such as invoices, receipts, or forms. It is especially useful when the same document type has multiple layouts or formats, as it can learn and infer the values for the targeted fields, even from documents and layouts it has never seen before1.
The Machine Learning Extractor can be used with one of UiPath's public Document Understanding endpoints, which provide generic models for certain document types, or with custom trained machine learning models hosted in AI Center, which can be tailored to specific use cases. The Machine Learning Extractor can be configured and trained using the Data Extraction Scope activity in UiPath Studio2.

NEW QUESTION # 29
While creating a process automation pipeline, what process attribute should be avoided to ensure there are minimal or no automation maintenance requirements?

- A. High process run time
- B. The process requires exception handling
- C. The process is prone to human error
- D. Frequent business logic change

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Processes that undergo frequent business logic changes require frequent updates to automation scripts, resulting in high maintenance effort and potential breakdowns in unattended execution.

* Stable, rules-based processes are preferred for long-term, low-maintenance automation.

NEW QUESTION # 30

What is the primary metric used to calculate the score for the All Labels performance factor in UiPath Communications Mining?

- A. Number of labels.
- B. Volume of data uploaded.
- C. Mean Average Precision.
- D. Number of annotations.

Answer: C

Explanation:
The Mean Average Precision (MAP) is the primary metric used in UiPath Communications Mining to assess the performance of classification models, specifically for the "All Labels" factor. MAP evaluates how well the model predicts labels by considering both the precision and recall of the predictions. This metric is commonly used in information retrieval systems to provide an overall measure of accuracy across all labels in the dataset.

NEW QUESTION # 31

What is the main purpose of the Document Understanding Process template in UiPath Studio?

- A. To create custom workflows from scratch.
- B. To eliminate the need for exception handling in workflows.
- C. To offer a fully functional document processing tool that is easy to use and execute.
- D. To integrate with other connected automations seamlessly.

Answer: C

Explanation:
The main purpose of the Document Understanding Process template in UiPath Studio is to provide users with a ready-to-use document processing framework. It is designed to simplify the development of document understanding automations by offering out-of-the-box features like logging, exception handling, and retry mechanisms. This template allows developers to quickly start working on both simple demos and large-scale document processing projects without needing to build everything from scratch. It is equipped with key components such as classifiers and extractors to streamline document classification and data extraction workflows
