1Z1-771 Exam Collection & 1Z1-771 Reliable Dumps Ppt

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our 1Z1-771 practice materials. Their expertise about 1Z1-771 practice materials is unquestionable considering their long-time research and compile. Furnishing exam candidates with highly effective materials, you can even get the desirable outcomes within one week. By concluding quintessential points into 1Z1-771 practice materials, you can pass the exam with the least time while huge progress.

Oracle APEX Cloud Developer Professional Sample Questions (Q48-Q53):

NEW QUESTION # 48

You have defined a REST Data Source with ORDS as the REST Data Source Type. The Source is being used as source for an editable Interactive Grid. When a user updates an employee record in this Interactive Grid, which operation is performed on the Database?

- A. GET
- B. POST
- C. PUT

Answer: C

Explanation:

An editable Interactive Grid synced with a REST Data Source (ORDS) maps CRUD operations to HTTP methods:

C . PUT: Updates an existing resource. When a user edits a row (e.g., changes SALARY), the grid sends a PUT request to the ORDS endpoint (e.g., /employees/101), updating the corresponding record.

A . POST: Creates new records, used for inserts, not updates.

B . GET: Retrieves data, used for initial grid population, not updates.

Technical note: ORDS maps PUT to an update operation on the underlying table, requiring the REST endpoint to support this method.

NEW QUESTION # 49

Which is a valid method of logging messages to the execution log in APEX applications?

- A. `apex_automation.log_info ('SAL for ' || :ENAME || ' increased by 19.');`
- B. `apex_error.add_error ('SAL for ' || :ENAME || ' increased by 19.');`
- C. `apex_debug.info ('SAL for :ENAME ||' increased by 19.');`

Answer: A

Explanation:

Logging in APEX tracks runtime activity:

A . `apex_automation.log_info`: Correctly logs an informational message to the execution log for automation tasks (e.g., workflows).

The syntax `|| :ENAME ||` concatenates the item value (e.g., "JOHN") into "SAL for JOHN increased by 19." It's stored in `APEX_AUTOMATION_LOG`, viewable in Monitoring.

B . `apex_debug.info`: Logs to debug output, but the syntax is flawed (`:ENAME ||` isn't concatenated properly; should be 'SAL for ' || `:ENAME || ...`). It's valid only when debugging is enabled (e.g., `APEX_DEBUG.ENABLE`).

C . `apex_error.add_error`: Adds an error to the error stack for user display, not a log message.

Technical Insight: `log_info` is non-intrusive, unlike `apex_debug`, which requires debug mode, or `apex_error`, which signals failure.

Use Case: Logging salary updates in a scheduled job without debug overhead.

Pitfall: Ensure `:ENAME` is in scope (e.g., page item).

NEW QUESTION # 50

Which three Theme Components are available out-of-the-box with the Universal Theme?

- A. Badge
- B. REST Data Sources
- C. Comments
- D. Calendar

Answer: A,C,D

Explanation:

The Universal Theme (Theme 42) provides pre-built components:

A . Calendar: A region type for date-based displays (e.g., events), styled with Universal Theme templates (e.g., FullCalendar integration).

B . Comments: A region type for user feedback or notes, with built-in styling and moderation options.

C . Badge: A UI component for displaying counts or statuses (e.g., "5 New"), often in navigation or lists, styled via CSS classes.

D . REST Data Sources: A data feature, not a theme component; it's a Shared Component, not a UI element tied to Universal Theme.

Technical Insight: These components leverage Universal Theme's CSS (e.g., t-Badge, t-Calendar) and JavaScript for interactivity, reducing custom coding.

Use Case: A dashboard with a Calendar for schedules, Comments for feedback, and Badges for unread alerts.

Pitfall: Customizing requires Theme Roller or CSS overrides.

NEW QUESTION # 51

You must use a Static Content region type to display messages about the employee of the month. Which text, when placed in this region, will display the message correctly?

- A. Join me in congratulating: P1_ENAME as the new employee of the month!
- B. Join me in congratulating & P1_ENAME. as the new employee of the month!
- C. Join me in congratulating V('P1_ENAME') as the new employee of the month!
- **D. Join me in congratulating: &P1_ENAME. as the new employee of the month!**

Answer: D

Explanation:

Static Content regions display fixed text with substitution:

B . &P1_ENAME.: The &ITEM_NAME. syntax substitutes the value of P1_ENAME at runtime (e.g., "Join me in congratulating: John as..."), correctly rendering the item's value. The dot ensures proper parsing.

A . P1_ENAME: Treated as literal text, not substituted.

C . V('P1_ENAME'): A PL/SQL function, invalid in static content; it's for server-side code.

D . & P1_ENAME.: Space before P1_ENAME breaks substitution syntax.

Pitfall: Ensure P1_ENAME is populated (e.g., via a page process) to avoid blank output.

NEW QUESTION # 52

Which two tasks can be performed by the APEX Assistant when you create an application using the "Create App using Generative AI" option?

- **A. Create the application blueprint.**
- B. Create a Generative AI service.
- **C. Add a Dashboard page.**
- D. Update the App icon with a custom image.

Answer: A,C

Explanation:

The "Create App using Generative AI" feature in APEX Assistant leverages natural language processing to automate application creation. When invoked:

Create the application blueprint: APEX Assistant generates a foundational structure (blueprint) for the application, including pages, regions, and navigation, based on the user's natural language input (e.g., "Create an app to manage employees"). This blueprint serves as the starting point, which developers can refine.

Add a Dashboard page: The Assistant can interpret requests for specific page types, such as dashboards, and include them in the generated app. Dashboards typically feature charts, summaries, or key metrics, and this is a common task supported by the AI-driven creation process.

Create a Generative AI service: This is not a task performed during app creation; instead, it's a prerequisite configuration step done separately in the Instance Administration settings.

Update the App icon: While app icons can be customized manually post-creation, this is not an automated task performed by APEX Assistant during the generative process.

This feature streamlines development by interpreting intent and building functional components, saving significant time compared to manual creation.

NEW QUESTION # 53

.....

A calm judgment is worth more than a thousand hasty discussions. I know that when you choose which our 1Z1-771 exam materials to buy, it will be very tangled up. This is a responsible performance for you. But you can't casually make a choice because of tangle. And our 1Z1-771 Study Materials won't let you regret. You can just free download the demos of the 1Z1-771 practice guide to have a check our quality.
